REFERENCES ATP 1009502, Paragraphs 3-3.14, 3-3.10 and 3-3.15 and JDC's 10734 and 10706

IMPORTANT JDC 10706 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

NOTE: Assure that the Counter, Phase Angle Voltmeter (PAVM), and 2-1/2-inch autocollimator reticle lamp have been energized at least 15 minutes immediately prior to use in this test.

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON
OPTICS POWER ON
BLOCK I SERIES 100.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

ZERO OPTICS
CONTROLLER DIRECT
SCT DRIVE NORMAL
SXT DRIVE NORMAL.

4. Assure that the following pushbuttons are not lighted:

TRACKER
TRACKER POWER.

5. Set switches as follows:

SHAFT SLEW CONTROL to OFF

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

TRUNNION SLEW CONTROL to OFF
SLAVE TELESCOPE to STAR LOS.

6. After CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton on Remote Optics Controller to light the MANUAL indicator.

7. Connect the 2X TRUNNION CDU encoder output to the Counter by setting the COUNTER INPUT "A" OR "AB" selector on Primary Signal Selector panel to 16.

8. Set selectors on Counter to perform forward-reverse counting function as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 1
CLOCK SELECTOR to INT
FUNCTION to COUNT
INPUT SELECTOR to A-B
SENSE SELECTOR to FWD.

9. Use TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on Remote Optics Controller to drive 2X TRUNNION CDU while adjusting ATTEN, SLOPE, and TRIGGER switches and controls on channels A and B of the Counter.

10. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.

11. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

12. Connect SCT Trunnion 1X resolver error signal to PAVM by setting Primary Signal Selector to 109.

13. Set the FREQUENCY switch on the PAVM to 800~ No. 1.

14. Use SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to drive the SHAFT ANGLE CDU to 270.000 (±0.005)°.

15. Press the RESET pushbutton on Counter.

NOTE: When positioning the Rotary Table, always approach the final setting in the increasing direction. To determine Rotary Table indications, take the average of a set of five readings of the optigon arc-second scale, offsetting the vernier knob before each setting.

16. Set the tilt axis of the Rotary Table to 0° 00' 00" (±1").

B. PROCEDURE

1. Add each of the incremental angles in the following table to the ZRP established in JDC 10706. If the sum is greater than 360°, subtract 360°. Position the Rotary Table rotary axis to within ±1 arc second of each of the calculated angles. At each Rotary Table setting, perform the following steps:

DATE ______

---

a. Sight through the SCT eyepiece and use the TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on the Remote Optics Controller to position the 2-1/2-inch autocollimator reticle at the center of the SCT reticle pattern as shown in figure 1. Use the SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to adjust the SCT shaft angle if necessary.

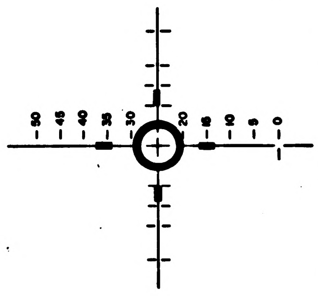

Figure 1. Coincident Reticles

b. Record 2X TRUNNION CDU, Counter, and SCT panel trunnion angle counter indications.

c. Monitor the PAVM to determine and record magnitude and sign of in-phase and quadrature components of SCT Trunnion 1X resolver error signal.

ROTARY TABLE INCREMENTS

(1)	0°	00'	00"
(2)	4°	00'	00"
(3)	11°	00'	00"
(4)	16°	00'	00"
(5)	22°	00'	00"
(6)	30°	00'	00"
(7)	36°	00'	00"
(8)	40°	00'	00"
(9)	45°	00'	00"
(10)	50°	00'	00"
(11)	54°	00'	00"
(12)	57°	00'	00"
(13)	0°	00'	00"

2. Set SLAVE TELESCOPE switch on Remote Optics Controller to OFFSET 25°.

3. Sight through SCT eyepiece and adjust Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is centered on the 0 mark of the SCT reticle as shown in Figure 2. Record Rotary Table rotary axis readout.

DATE ______

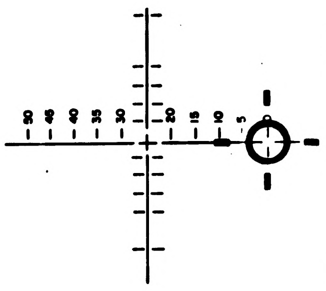

Figure 2. Reticles at 25° OFFSET

4. Sight through the SCT eyepiece and adjust the Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is positioned at the junction of the SCT reticle pattern crosshairs. Record Rotary Table rotary axis readout.

5. Subtract the value recorded in step B.3 from the value recorded in step B.4. Record the difference.

6. Subtract the Rotary Table ZRP recorded in JDC 10706 from the value recorded in step B.4. Record the difference.

7. Set SLAVE TELESCOPE switch to LDMK LOS position.

8. Sight through the SCT eyepiece and adjust the Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is positioned at the junction of the SCT reticle pattern crosshairs. Record Rotary Table rotary axis readout.

9. Subtract the Rotary Table ZRP recorded in JDC 10706 from the value recorded in step B.8. Record the difference.

INTERVAL

TOOLS AND MATERIAL

NOTE: Assure that the Counter, Phase Angle Voltmeter (PAVM), and 2-1/2-inch autocollimator reticle lamp have been energized at least 15 minutes immediately prior to use in this test.

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:
   OIA ON
   OPTICS POWER ON
   BLOCK I SERIES 100.
3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:
   ZERO OPTICS
   CONTROLLER DIRECT
   SCT DRIVE NORMAL
   SXT DRIVE NORMAL.
4. Assure that the following pushbuttons are not lighted:
   TRACKER
   TRACKER POWER.
5. Set switches as follows:
   SHAFT SLEW CONTROL to OFF

VERIFICATION WITH SIDL REQUIRED BEFORE USE

TRUNNION SLEW CONTROL to OFF
SLAVE TELESCOPE to STAR LOS.

6. After CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton on Remote Optics Controller to light the MANUAL indicator.
7. Connect the 2X TRUNNION CDU encoder output to the Counter by setting the COUNTER INPUT "A" OR "AB" selector on Primary Signal Selector panel to 16.
8. Set selectors on Counter to perform forward-reverse counting function as follows:
   DISPLAY TIME (N_2) to 10^6
   DISPLAY RESET to ZERO
   CLOCK FREQUENCY DIVIDER to 1
   CLOCK SELECTOR to INT
   FUNCTION to COUNT
   INPUT SELECTOR to A-B
   SENSE SELECTOR to FWD.
9. Use TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on Remote Optics Controller to drive 2X TRUNNION CDU while adjusting ATTEN, SLOPE, and TRIGGER switches and controls on channels A and B of the Counter.
10. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.
11. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.
12. Connect SCT Trunnion 1X resolver error signal to PAVM by setting Primary Signal Selector to 109.
13. Set the FREQUENCY switch on the PAVM to 800~ No. 1.
14. Use SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to drive the SHAFT ANGLE CDU to 270.000 (±0.005)°.
15. Press the RESET pushbutton on Counter.

NOTE: When positioning the Rotary Table, always approach the final setting in the increasing direction. To determine Rotary Table indications, take the average of a set of five readings of the optigon arc-second scale, offsetting the vernier knob before each setting.

16. Set the tilt axis of the Rotary Table to 0° 00' 00" (±1").

B. PROCEDURE

1. Add each of the incremental angles in the following table to the ZRP established in JDC 10706. If the sum is greater than 360°, subtract 360°. Position the Rotary Table rotary axis to within ±1 arc second of each of the calculated angles. At each Rotary Table setting, perform the following steps:

---

a. Sight through the SCT eyepiece and use the TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on the Remote Optics Controller to position the 2-1/2-inch autocollimator reticle at the center of the SCT reticle pattern as shown in figure 1. Use the SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to adjust the SCT shaft angle if necessary.

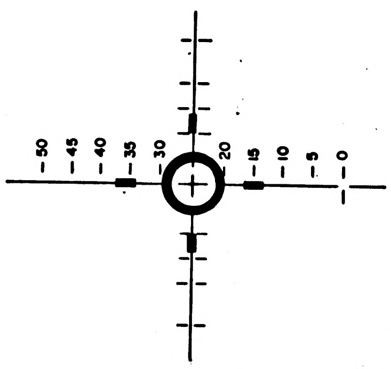

Figure 1. Coincident Reticles

b. Record 2X TRUNNION CDU, Counter, and SCT panel trunnion angle counter indications.

c. Monitor the PAVM to determine and record magnitude and sign of in-phase and quadrature components of SCT Trunnion 1X resolver error signal.

ROTARY TABLE INCREMENTS

(1)	0°	00'	00"
(2)	4°	00'	00"
(3)	11°	00'	00"
(4)	16°	00'	00"
(5)	22°	00'	00"
(6)	30°	00'	00"
(7)	36°	00'	00"
(8)	40°	00'	00"
(9)	45°	00'	00"
(10)	50°	00'	00"
(11)	54°	00'	00"
(12)	0°	00'	00"

2. Set SLAVE TELESCOPE switch on Remote Optics Controller to OFFSET 25°.
3. Sight through SCT eyepiece and adjust Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is centered on the 0 mark of the SCT reticle as shown in Figure 2. Record Rotary Table rotary axis readout.

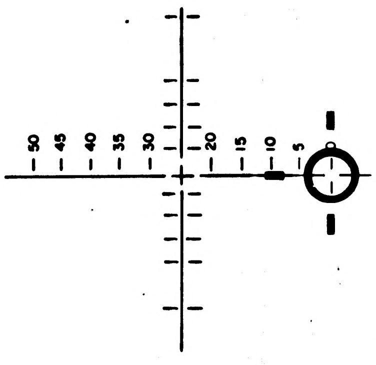

Figure 2. Reticles at 25° OFFSET

4. Sight through the SCT eyepiece and adjust the Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is positioned at the junction of the SCT reticle pattern crosshairs. Record Rotary Table rotary axis readout.
5. Subtract the value recorded in step B.3 from the value recorded in step B.4. Record the difference.
6. Subtract the Rotary Table ZRP recorded in JDC 10706 from the value recorded in step B.4. Record the difference.
7. Set SLAVE TELESCOPE switch to LDMK LOS position.
8. Sight through the SCT eyepiece and adjust the Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is positioned at the junction of the SCT reticle pattern crosshairs. Record Rotary Table rotary axis readout.
9. Subtract the Rotary Table ZRP recorded in JDC 10706 from the value recorded in step B.8. Record the difference.

JOB SCT TRUNNION ACCURACY TEST

INITIAL TDRR 19950 D.S. PGS 13

SUBSYSTEM OPTICAL

ASSY.

DESCRIPTION SCT trunnion accuracy is checked by comparing SCT panel trunnion angle counter, 2X TRUNNION CDU readout and trunnion encoder output with Rotary Table angles. Operation of SCT in OFFSET 25° and LANDMARK LOS 0° modes is also checked.

IMPORTANT JDC 10706 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

NOTE: Assure that the Counter, Phase Angle Voltmeter (PAVM), and 2-1/2-inch autocollimator reticle lamp have been energized at least 15 minutes immediately prior to use in this test.

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON
OPTICS POWER ON
BLOCK I SERIES 100.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

ZERO OPTICS
CONTROLLER DIRECT
SCT DRIVE NORMAL
SXT DRIVE NORMAL.

4. Assure that the following pushbuttons are not lighted:

TRACKER
TRACKER POWER.

5. Set switches as follows:

SHAFT SLEW CONTROL to OFF

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 11 JUN 65

JOB SCT TRUNNION ACCURACY TEST

JDC 10710 REV C PAGE 2 OF 4

SUBSYSTEM OPTICAL

ASSY

TRUNNION SLEW CONTROL to OFF
SLAVE TELESCOPE to STAR LOS.

6. After CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton on Remote Optics Controller to light the MANUAL indicator.
7. Connect the 2X TRUNNION CDU encoder output to the Counter by setting the COUNTER INPUT "A" OR "AB" selector on Primary Signal Selector panel to 16.
8. Set selectors on Counter to perform forward-reverse counting function as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 1
CLOCK SELECTOR to INT
FUNCTION to COUNT
INPUT SELECTOR to A-B
SENSE SELECTOR to FWD.

9. Use TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on Remote Optics Controller to drive 2X TRUNNION CDU while adjusting ATTEN, SLOPE, and TRIGGER switches and controls on channels A and B of the Counter.
10. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.
11. After the CDU's have zeroed, press the RESET pushbutton on the counter.
12. Press the MANUAL/ZERO OPTICS pushbutton on Remote Optics Controller to light the MANUAL indicator.
13. Connect SCT Trunnion 1X resolver error signal to PAVM by setting Primary Signal Selector to 109.
14. Set the FREQUENCY switch on the PAVM to 800~ No. 1.
15. Use SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to drive the SHAFT ANGLE CDU to 270.000 (±0.005)°.

NOTE: When positioning the Rotary Table, always approach the final setting in the increasing direction. To determine Rotary Table indications, take the average of a set of five readings of the optigon arc-second scale, offsetting the vernier knob before each setting.

16. Set the tilt axis of the Rotary Table to 0° 00' 00" (±1").

B. PROCEDURE

1. Add each of the incremental angles in the following table to the ZRP established in JDC 10706. If the sum is greater than 360°, subtract 360°. Position the Rotary Table rotary axis to within ±1 arc second of each of the calculated angles. At each Rotary Table setting, perform the following steps:

DATE 11 JUN 65

JOB SCT TRUNNION ACCURACY TEST

JDC 10710 REV C PAGE 3 OF 4

SUBSYSTEM OPTICAL

ASSY

a. Sight through the SCT eyepiece and use the TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on the Remote Optics Controller to position the 2-1/2-inch autocollimator reticle at the center of the SCT reticle pattern as shown in figure 1. Use the SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to adjust the SCT shaft angle if necessary.

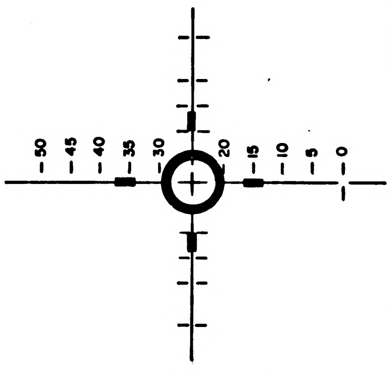

Figure 1. Coincident Reticles

b. Record 2X TRUNNION CDU, Counter, and SCT panel trunnion angle counter indications.

c. Monitor the PAVM to determine and record magnitude and sign of in-phase and quadrature components of SCT Trunnion 1X resolver error signal.

JOB SCT TRUNNION ACCURACY TEST

ASSY.

SUBSYSTEM OPTICAL

DESCRIPTION SCT trunnion accuracy is checked by comparing SCT panel trunnion angle counter, 2X TRUNNION CDU readout and trunnion encoder output with Rotary Table angles. Operation of SCT in OFFSET 25° and LANDMARK LOS 0° modes is also checked.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES ATP 1009502, Paragraphs 3-3.1, 3-3.14.2, 3-3.15, 3-3.16. JDC 10734, 10706

IMPORTANT JDC 10706 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

NOTE: Assure that the Counter, Phase Angle Voltmeter (PAVM), and 2-1/2-inch autocollimator reticle lamp have been energized at least 15 minutes immediately prior to use in this test.

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:
   OIA ON/ISS POWER DISABLED
   OPTICS POWER ON
   BLOCK I SERIES 100.
3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:
   ZERO OPTICS
   CONTROLLER DIRECT
   SCT DRIVE NORMAL
   SXT DRIVE NORMAL.
4. Assure that the following pushbuttons are not lighted:
   TRACKER
   TRACKER POWER.
5. Set switches as follows:
   SHAFT SLEW CONTROL to OFF

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

JOB SCT TRUNNION ACCURACY TEST JDC 10710 REV PAGE 2 OF 4

SUBSYSTEM OPTICAL ASSY

   TRUNNION SLEW CONTROL to OFF
   SLAVE TELESCOPE to STAR LOS.
6. After CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton on Remote Optics Controller to light the MANUAL indicator.
7. Connect the 2X TRUNNION CDU encoder output to the Counter by setting the COUNTER INPUT "A" OR "AB" selector on Primary Signal Selector panel to 16.
8. Set selectors on Counter to perform forward-reverse counting function as follows:
   DISPLAY TIME (N_2) to 10^5
   DISPLAY RESET to ZERO
   CLOCK FREQUENCY DIVIDER to 1
   CLOCK SELECTOR to INT
   FUNCTION to COUNT
   INPUT SELECTOR to A-B
   SENSE SELECTOR to FWD.
9. Use TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on Remote Optics Controller to drive 2X TRUNNION CDU while adjusting ATTEN, SLOPE, and TRIGGER switches and controls on channels A and B of the Counter.
10. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.
11. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.
12. Connect SCT Trunnion 1X resolver error signal to PAVM by setting Primary Signal Selector to 109.
13. Set the FREQUENCY switch on the PAVM to 800~ No. 1.
14. Use SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to drive the SHAFT ANGLE CDU to 270.000 (±0.005)°.
15. Press the RESET pushbutton on Counter.

    NOTE: When positioning the Rotary Table, always approach the final setting in the increasing direction. To determine Rotary Table indications, take the average of a set of five readings of the optigon arc-second scale, offsetting the vernier knob before each setting.

16. Set the tilt axis of the Rotary Table to 0° 00' 00" (±1").

B. PROCEDURE

1. Add each of the incremental angles in the following table to the ZRP established in JDC 10706. If the sum is greater than 360°, subtract 360°. Position the Rotary Table rotary axis to within ±1 arc second of each of the calculated angles. At each Rotary Table setting, perform the following steps:

DATE ______

JOB SCT TRUNNION ACCURACY TEST JDC 10710 REV PAGE 3 OF 4

SUBSYSTEM OPTICAL ASSY

a. Sight through the SCT eyepiece and use the TRUNNION SLEW CONTROL switch and COARSE and FINE GAIN CONTROL on the Remote Optics Controller to position the 2-1/2-inch autocollimator reticle at the center of the SCT reticle pattern as shown in figure 1. Use the SHAFT SLEW CONTROL switch and COARSE and FINE GAIN CONTROL to adjust the SCT shaft angle if necessary.

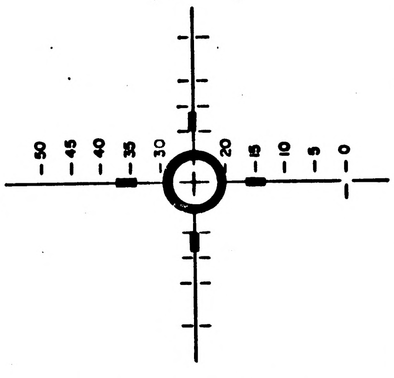

Figure 1. Coincident Reticles

b. Record 2X TRUNNION CDU, Counter, and SCT panel trunnion angle counter indications.

c. Monitor the PAVM to determine and record magnitude and sign of in-phase and quadrature components of SCT Trunnion 1X resolver error signal.

ROTARY TABLE INCREMENTS

(1)	0°	00'	00"
(2)	5°	00'	00"
(3)	10°	00'	00"
(4)	15°	00'	00"
(5)	20°	00'	00"
(6)	25°	00'	00"
(7)	30°	00'	00"
(8)	35°	00'	00"
(9)	40°	00'	00"
(10)	45°	00'	00"
(11)	50°	00'	00"
(12)	53°	00'	00"
(13)	57°	00'	00"
(14)	0°	00'	00"

2. Set SLAVE TELESCOPE switch on Remote Optics Controller to OFFSET 25°.
3. Sight through SCT eyepiece and adjust Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is centered on the 0 mark of the SCT reticle as shown in Figure 2. Record Rotary Table rotary axis readout.

DATE ______

JOB SCT TRUNNION ACCURACY TEST JDC 10710 REV PAGE 4 OF 4

SUBSYSTEM OPTICAL ASSY

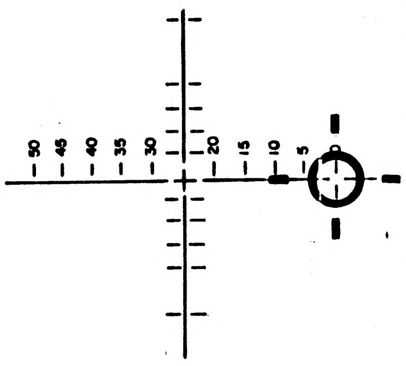

Figure 2. Reticles at 25° OFFSET

4. Sight through the SCT eyepiece and adjust the Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is positioned at the junction of the SCT reticle pattern crosshairs. Record Rotary Table rotary axis readout.
5. Subtract the value recorded in step B.3 from the value recorded in step B.4. Record the difference.
6. Subtract the Rotary Table ZRP recorded in JDC 10706 from the value recorded in step B.4. Record the difference.
7. Set SLAVE TELESCOPE switch to LDMK LOS position.
8. Sight through the SCT eyepiece and adjust the Rotary Table rotary axis until the reticle pattern of the 2-1/2-inch autocollimator is positioned at the junction of the SCT reticle pattern crosshairs. Record Rotary Table rotary axis readout.
9. Subtract the Rotary Table ZRP recorded in JDC 10706 from the value recorded in step B.8. Record the difference.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the G&N Indicator Control Panel is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON
OPTICS POWER ON
BLOCK I SERIES 100

NOTE: The PAVM and Counter shall have been energized for at least 15 minutes immediately prior to use in this test.

3. Set switches and selectors on G&N Indicator Control Panel as follows:

SLAVE TELESCOPE to STAR LOS
Mode Selector to MANUAL
TRACKER POWER to OFF
CONTROLLER SPEED to HI
CONTROLLER MODE to DIRECT.

4. Assure that the TRACKER pushbutton is not lighted.

5. Set FREQUENCY switch on PAVB to 800 ~ No. 1

B. PROCEDURE

1. Connect the SXT Shaft MDA Input Signal to the PAVM by setting Primary Signal Selector to 203.

2. With the Optics Hand Controller in its center position, monitor PAVM to determine and record in-phase and quadrature voltage indications.

3. Connect the SXT Trunnion MDA Input signal to the PAVM by setting Primary Signal Selector to 106.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ASSY

4. With the Optics Hand Controller in its center position, monitor PAVM to determine and record in-phase and quadrature voltage indications.

5. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

6. Set COUNTER INPUT "A" or "AB" selector switch to 16.

7. Set selectors on Counter to perform E/UT of A-B for one second time base as follows:

SAMPLE TIME (N_1) to 100000
DISPLAY TIME (N_2) to 10^5
CLOCK FREQUENCY DIVIDER to 1
CLOCK SELECTOR to INT
FUNCTION to E/UT x N_1
INPUT SELECTOR to A-B
SENSE SELECTOR to FWD
DISPLAY RESET to ZERO.

8. Set CONTROLLER SPEED switch on G&N Indicator Control Panel to LOW.

9. Hold the Optics Hand Controller at the upper limit while adjusting A channel ATTEN, SLOPE, and TRIGGER switches and controls on Counter as required.

10. Hold the Optics Hand Controller at the lower limit while adjusting B channel ATTEN, SLOPE, and TRIGGER switches and controls as required.

11. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.

12. After the CDU 's have zeroed, set the mode selector to MANUAL.

13. Set DIGITAL RECORDER SELECTOR switch on Primary Signal Selector panel to CTR.

14. Press PRINT pushbutton on Digital Recorder to disable Printer.

15. Perform following steps in sequence:

a. Press PRINT pushbutton on Digital Recorder to enable printer.
b. Press RESET pushbutton on Counter.
c. Hold the Optics Hand Controller at its upper limit.
d. Approximately 10 seconds after performing step B.15c, release the Optics Hand Controller.
e. Press PRINT pushbutton on Digital Recorder to disable printer.

16. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

17. Perform following steps in sequence:

a. Press PRINT pushbutton on Digital Recorder to enable printer.
b. Press RESET pushbutton on Counter.
c. Hold the Optics Hand Controller at its lower limit.
d. Approximately 10 seconds after performing step B.17c release the Optics Hand Controller.
e. Press PRINT pushbutton on Digital Recorder to disable printer.

18. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

19. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.

20. Set CONTROLLER SPEED switch to MED.

21. After the CDU's have zeroed, set the mode selector to MANUAL.

22. Repeat steps B.15 through B.19.

23. Set CONTROLLER SPEED switch to HI.

24. After the CDU's have zeroed, set the mode selector to MANUAL.

25. Repeat steps B.15 through B.19.

26. Set COUNTER INPUT "A" or "AB" selector switch to 17.

27. After the CDU's have zeroed, set the mode selector on the G&N Indicator Control Panel to MANUAL.

28. Perform following steps in sequence:

a. Press PRINT pushbutton on Digital Recorder to enable printer.
b. Press RESET pushbutton on Counter.
c. Hold the Optics Hand Controller at its right limit.
d. Approximately 10 seconds after performing step B.28c, release the Optics Hand Controller.
e. Press PRINT pushbutton on Digital Recorder to disable printer.

29. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

30. Perform following steps in sequence:

a. Press PRINT pushbutton on Digital Recorder to enable printer.
b. Press RESET pushbutton on Counter.
c. Hold the Optics Hand Controller at its left limit.
d. Approximately 10 seconds after performing step B.30c, release the Optics Hand Controller.
e. Press PRINT pushbutton on Digital Recorder to disable printer.

31. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

32. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.

33. Set CONTROLLER SPEED switch to MED.

34. Repeat steps B.27 through B.32.

35. Set CONTROLLER SPEED switch to LOW.

36. Repeat steps B.27 through B.32.

37. Connect the SCT Trunnion Tachometer output signal to the PAVM by setting Primary Signal Selector to 105.

38. Press the TRACKER pushbutton on the G&N Indicator Control Panel. The pushbutton shall light.

39. Hold the Optics Hand Controller at the upper limit and monitor PAVM. to determine and record the steady state in-phase voltage indication.

40. Hold the Optics Hand Controller at the lower limit and monitor PAVM to determine and record, the steady state in-phase voltage indication.

41. Set CONTROLLER SPEED switch to MED.

42. Repeat Steps B.39 and B.40.

43. Set CONTROLLER SPEED switch to HI.

44. Repeat steps B.39 through B.41.

45. Press the TRACKER pushbutton. The pushbutton shall go out.

46. Set the mode selector to MANUAL.

47. Hold the Optics Hand Controller at the upper limit while monitoring the 2X TRUNNION CDU to determine, and record, that it is driving in the direction of increasing angles.

48. Hold the Optics Hand Controller at the right limit while monitoring the SHAFT ANGLE CDU to determine, and record, that it is driving in the direction of increasing angles.

49. Connect the Remote Optics Controller to cable W87 as shown in JDC 10734.

50. Assure that the following pushbuttons and indicators on the Remote Optics Controller are lighted:

CONTROLLER DIRECT
ZERO OPTICS
SXT DRIVE NORMAL
SCT DRIVE NORMAL

51. Assure that the following pushbuttons are not lighted:

TRACKER
TRACKER POWER

52. Set switches and controls as follows:

SLAVE TELESCOPE to STAR LOS
COARSE GAIN CONTROL to HI
FINE GAIN CONTROL fully clockwise

53. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

54. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL, drive the SHAFT ANGLE CDU to 270.000 (±0.5).

55. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 20.000 (±0.5).

56. Set switches and controls as follows:

COARSE GAIN CONTROL to MED
FINE GAIN CONTROL fully clockwise

57. Press the CONTROLLER DIRECT/CONTROLLER RESOLVED pushbutton to light the CONTROLLER RESOLVED indicator.

NOTE: To determine angular excursion in steps B.58 and B.65, the background may be used as a reference. Sight through SCT eyepiece and use the scale on the numbered reticle line to establish background reference points on both sides of the reticle center.

DATE ________

SUBSYSTEM OPTICAL | ASSY

58. Sight through SCT eyepiece and observe horizontal motion of the center of the SCT reticle pattern when the TRUNNION SLEW CONTROL switch is set to INCR. Set the TRUNNION SLEW CONTROL switch to OFF after the 2X TRUNNION CDU indication is greater than 90.000. Record the estimated maximum angular excursion of the center of the SCT reticle pattern from vertical.

59. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

60. Press the CONTROLLER DIRECT/CONTROLLER RESOLVED pushbutton to light the CONTROLLER DIRECT indicator.

61. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

62. Repeat step B.55.

63. Set switches and controls as follows:
COARSE GAIN CONTROL to MED
FINE GAIN CONTROL fully clockwise.

64. Repeat Step B.57.

65. Sight through SCT eyepiece and observe vertical motion of center of SCT reticle pattern when the SHAFT SLEW CONTROL switch is set to INCR. Set the SHAFT SLEW CONTROL switch to OFF after the 2X TRUNNION CDU indication is greater than 90.000. Record the estimated maximum angular excursion of the center of the SCT reticle pattern from horizontal.

c. Hold the Optics Hand Controller at its lower limit.

d. Approximately 10 seconds after performing step B.17c release the Optics Hand Controller.

e. Press PRINT pushbutton on Digital Recorder to disable printer.

18. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

---

19. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.

20. Set CONTROLLER SPEED switch to MED.

21. After the CDU's have zeroed, set the mode selector to MANUAL.

22. Repeat steps B.15 through B.19.

23. Set CONTROLLER SPEED switch to HI.

24. After the CDU's have zeroed, set the mode selector to MANUAL.

25. Repeat steps B.15 through B.19.

26. Set COUNTER INPUT "A" or "AB" selector switch to 17.

27. After the CDU's have zeroed, set the mode selector on the G&N Indicator Control Panel to MANUAL.

28. Perform following steps in sequence:

a. Press PRINT pushbutton on Digital Recorder to enable printer.

b. Press RESET pushbutton on Counter.

c. Hold the Optics Hand Controller at its right limit.

d. Approximately 10 seconds after performing step B.28c, release the Optics Hand Controller.

e. Press PRINT pushbutton on Digital Recorder to disable printer.

29. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

30. Perform following steps in sequence:

a. Press PRINT pushbutton on Digital Recorder to enable printer.

b. Press RESET pushbutton on Counter.

c. Hold the Optics Hand Controller at its left limit.

d. Approximately 10 seconds after performing step B.30c, release the Optics Hand Controller.

e. Press PRINT pushbutton on Digital Recorder to disable printer.

31. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.

32. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.

33. Set CONTROLLER SPEED switch to MED.

34. Repeat steps B.27 through B.32.

35. Set CONTROLLER SPEED switch to LOW.

36. Repeat steps B.27 through B.32.

37. Connect the Remote Optics Controller to cable W87 as shown in JDC 10734.

38. Assure that the following pushbuttons and indicators on the Remote Optics Controller are lighted:

CONTROLLER DIRECT

ZERO OPTICS

SXT DRIVE NORMAL

SCT DRIVE NORMAL

---

39. Assure that the following pushbuttons are not lighted:

TRACKER

TRACKER POWER

40. Set switches and controls as follows:

SLAVE TELESCOPE to STAR LOS

COARSE GAIN CONTROL to HI

FINE GAIN CONTROL fully clockwise

41. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

42. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL, drive the SHAFT ANGLE CDU to 270.000 (±0.5).

43. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 20.000 (±0.5).

44. Set switches and controls as follows:

COARSE GAIN CONTROL to MED

FINE GAIN CONTROL fully clockwise

45. Press the CONTROLLER DIRECT/CONTROLLER RESOLVED pushbutton to light the CONTROLLER RESOLVED indicator.

NOTE: To determine angular excursion in steps B.46 and B.53, the background may be used as a reference. Sight through SCT eyepiece and use the scale on the numbered reticle line to establish background reference points on both sides of the reticle center.

46. Sight through SCT eyepiece and observe horizontal motion of the center of the SCT reticle pattern when the TRUNNION SLEW CONTROL switch is set to INCR. Set the TRUNNION SLEW CONTROL switch to OFF after the 2X TRUNNION CDU indication is greater than 90.000. Record the estimated maximum angular excursion of the center of the SCT reticle pattern from vertical.

47. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

48. Press the CONTROLLER DIRECT/CONTROLLER RESOLVED pushbutton to light the CONTROLLER DIRECT indicator.

49. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

50. Repeat step B.43.

51. Set switches and controls as follows:

COARSE GAIN CONTROL to MED

FINE GAIN CONTROL fully clockwise.

52. Repeat Step B.45.

53. Sight through SCT eyepiece and observe vertical motion of center of SCT reticle pattern when the SHAFT SLEW CONTROL switch is set to INCR. Set the SHAFT SLEW CONTROL switch to OFF after the 2X TRUNNION CDU indication is greater than 90.000. Record the estimated maximum angular excursion of the center of the SCT reticle pattern from horizontal.

JOB MAXIMUM DRIVE RATES AND RESOLVED MODE TEST
JDC 10711 REV. ____ PAGE 1 OF 4
INITIAL TDRR 19950 D.S. PGS 3
SUBSYSTEM OPTICAL
ASSY.

DESCRIPTION

Check of maximum drive rates, minimum output voltage of Optics Hand Controller, and Resolver Mode Operation.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES ATP 1009502, Paragraphs 3-3.11 and JDC 10734.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the G&N Indicator Contorl Panel is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:
    OIA ON/ISS POWER DISABLED
    OPTICS POWER ON
    BLOCK I SERIES 100
        Note: The PAVM and Counter shall have been energized for at least 15 minutes immediately prior to use in this test.
3. Set switches and selectors on G&N Indicator Control Panel as follows:
    SLAVE TELESCOPE to STAR LOS
    Mode Selector to MANUAL
    TRACKER POWER to OFF
    CONTROLLER SPEED to HI
    CONTROLLER MODE to DIRECT.
4. Assure that the TRACKER pushbutton is not lighted.
5. Set FREQUENCY switch on PAVM to 800~No.1.

B. PROCEDURE

1. Connect the SXT Shaft MDA Input signal to the PAVM by setting Primary Signal Selector to 203.
2. With the Optics Hand Controller in its center position, monitor PAVM to determine and record in-phase and quadrature voltage indications.
3. Connect the SXT Trunnion MDA Input signal to the PAVM by setting Primary Signal Selector to 106.
4. With the Optics Hand Controller in its center position, monitor PAVM to determine and record in-phase and quadrature voltage indications.
5. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.
6. Set COUNTER INPUT "A" or "AB" selector switch to 16.
7. Set selectors on Counter to perform E/UT of A-B for one second time base as follows:
    SAMPLE TIME (N_1) to 10000
    DISPLAY TIME (N_2) to 10^5

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

JOB MAXIMUM DRIVE RATES AND RESOLVED MODE TEST
JDC 10711 REV PAGE 2 OF 4
SUBSYSTEM OPTICAL
ASSY

    CLOCK FREQUENCY DIVIDER to 1
    CLOCK SELECTOR to INT
    FUNCTION to E/UT x N_1
    INPUT SELECTOR to A-B
    SENSE SELECTOR to FWD
    DISPLAY RESET to ZERO

8. Set CONTROLLER SPEED switch on G&N Indicator Control Panel to LOW.
9. Hold the Optics Hand Controller at the upper limit while adjusting A channel ATTEN, SLOPE, and TRIGGER switches and controls on Counter as required.
10. Hold the Optics Hand Controller at the lower limit while adjusting B channel ATTEN, SLOPE, and TRIGGER switches and controls as required.
11. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.
12. After the CDU's have zeroed, set the mode selector to MANUAL.
13. Set DIGITAL RECORDER SELECTOR switch on Primary Signal Selector panel to CTR.
14. Press PRINT pushbutton on Digital Recorder to disable Printer.
15. Perform following steps in sequence:
    a. Press PRINT pushbutton on Digital Recorder to enable printer.
    b. Press RESET pushbutton on Counter.
    c. Hold the Optics Hand Controller at its upper limit.
    d. Approximately 10 seconds after performing step B.15c, release the Optics Hand Controller.
    e. Press PRINT pushbutton on Digital Recorder to disable printer.
16. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.
17. Perform following steps in sequence:
    a. Press PRINT pushbutton on Digital Recorder to enable printer.
    b. Press RESET pushbutton on Counter.
    c. Hold the Optics Hand Controller at its lower limit.
    d. Approximately 10 seconds after performing step B.17c release the Optics Hand Controller.
    e. Press PRINT pushbutton on Digital Recorder to disable printer.
18. Select the three consecutive prinouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.
19. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.
20. Set CONTROLLER SPEED switch to MED.
21. After the CDU's have zeroed, set the mode selector to MANUAL.
22. Repeat steps B.15 through B.19.
23. Set CONTROLLER SPEED switch to HI.
24. After the CDU's have zeroed, set the mode selector to MANUAL.
25. Repeat steps B.15 through B.19.
26. Set COUNTER INPUT "A" or "AB" selector switch to 17.
27. After the CDU's have zeroed, set the mode selector on the G&N Indicator Control Panel to MANUAL.
28. Perform following steps in sequence:
    a. Press PRINT pushbutton on Digital Recorder to enable printer.
    b. Press RESET pushbutton on Counter.
    c. Hold the Optics Hand Controller at its right limit.
    d. Approximately 10 seconds after performing step B.28c, release the Optics Hand Controller.
    e. Press PRINT pushbutton on Digital Recorder to disable printer.
29. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.
30. Perform following steps in sequence:
    a. Press PRINT pushbutton on Digital Recorder to enable printer.
    b. Press RESET pushbutton on Counter.
    c. Hold the Optics Hand Controller at its left limit.
    d. Approximately 10 seconds after performing step B.30c, release the Optics Hand Controller.
    e. Press PRINT pushbutton on Digital Recorder to disable printer.

ASSY

31. Select the three consecutive printouts on Digital Recorder the values of which are most nearly equal and record the sum of the three selected printouts.
32. Set the mode selector on the G&N Indicator Control Panel to ZERO OPTICS.
33. Set CONTROLLER SPEED switch to MED.
34. Repeat steps B.27 through B.32.
35. Set CONTROLLER SPEED switch to LOW.
36. Repeat steps B.27 through B.32.
37. Connect the SCT Trunnion Tachometer output signal to the PAVM by setting Primary Signal Selector to 105.
38. Press the TRACKER pushbutton on the G&N Indicator Control Panel. The pushbutton shall light.
39. Hold the Optics Hand Controller at the upper limit and monitor PAVM, to determine and record the steady state in-phase voltage indication.
40. Hold the Optics Hand Controller at the lower limit and monitor PAVM to determine, and record, the steady state in-phase voltage indication.
41. Set CONTROLLER SPEED switch to MED.
42. Repeat Steps B.39 and B.40.
43. Set CONTROLLER SPEED switch to HI.
44. Repeat steps B.39 through B.41.
45. Press the TRACKER pushbutton, The pushbutton shall go out.
46. Set the mode selector to MANUAL.
47. Hold the Optics Hand Controller at the upper limit while monitoring the 2X TRUNNION CDU to determine, and record, that it is driving in the direction of increasing angles.
48. Hold the Optics Hand Controller at the right limit while monitoring the SHAFT ANGLE CDU to determine, and record, that it is driving in the direction of increasing angles.
49. Connect the Remote Optics Controller to cable W87 as shown in JDC 10734.
50. Assure that the following pushbuttons and indicators on the Remote Optics Controller are lighted:
    CONTROLLER DIRECT
    ZERO OPTICS
    SXT DRIVE NORMAL
    SCT DRIVE NORMAL
51. Assure that the following pushbuttons are not lighted:
    TRACKER
    TRACKER POWER
52. Set switches and controls as follows:
    SLAVE TELESCOPE to STAR LOS
    COARSE GAIN CONTROL to HI
    FINE GAIN CONTROL fully clockwise
53. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.
54. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL, drive the SHAFT ANGLE CDU to 270.000 (±0.5).
55. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 20.000 (±0.5).
56. Set switches and controls as follows:
    COARSE GAIN CONTROL to MED
    FINE GAIN CONTROL fully clockwise
57. Press the CONTROLLER DIRECT/CONTROLLER RESOLVED pushbutton to light the CONTROLLER RESOLVED indicator.
        Note: To determine angular excursion in steps B.58 and B.65, the background may be used as a reference. Sight through SCT eyepiece and use the scale on the numbered reticle line to establish background reference points on both sides of the reticle center.

58. Sight through SCT eyepiece and observe horizontal motion of the center of the SCT reticle pattern when the TRUNNION SLEW CONTROL switch is set to INCR. Set the TRUNNION SLEW CONTROL switch to OFF after the 2X TRUNNION CDU indication is greater than 90.000 . Record the estimated maximum angular excursion of the center of the SCT reticle pattern from vertical.
59. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.
60. Press the CONTROLLER DIRECT/CONTROLLER RESOLVED pushbutton to light the CONTROLLER DIRECT indicator.
61. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.
62. Repeat step B.55.
63. Set switches and controls as follows:
    COARSE GAIN CONTROL to MED
    FINE GAIN CONTROL fully clockwise.
64. Repeat Step B.57.
65. Sight through SCT eyepiece and observe vertical motion of center of SCT reticle pattern when the SHAFT SLEW CONTROL switch is set to INCR. Set the SHAFT SLEW CONTROL switch to OFF after the 2X TRUNNION CDU indication is greater than 90.000 . Record the estimated maximum angular excursion of the center of the SCT reticle pattern from horizontal.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

   OIA ON
   OPTICS POWER ON
   BLOCK I SERIES 100.

   NOTE: Assure that the Dual Beam Oscilloscope and PAVM have been energized at least 15 minutes immediately prior to use in this test.

3. Assure that the following indicators on the Remote Optics Controller are lighted:

   MANUAL
   CONTROLLER DIRECT
   SXT DRIVE DISABLED
   SCT DRIVE NORMAL.

4. Assure that the following pushbuttons are not lighted:

   TRACKER
   TRACKER POWER.

5. Set switches as follows:

   SLAVE TELESCOPE to STAR LOS
   COARSE GAIN CONTROL to LOW
   SHAFT SLEW CONTROL to OFF
   TRUNNION SLEW CONTROL to OFF.

6. Connect the SXT Trunnion MDA Input to the PAVM by setting the Primary Signal Selector to 106.

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

SUBSYSTEM OPTICAL
ASSY

7. Set FREQUENCY switch on PAVM to 800~ No. 1.

8. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to INCR and adjust the FINE GAIN CONTROL until the PAVM indicates 0.117 (±0.050) volts, 0 phase.

9. Set TRUNNION SLEW CONTROL switch to OFF.

10. Connect the 2X TRUNNION CDU encoder +Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers from jack J21 to jack J25 on Coaxial Distribution Panel and from jack J26 to jack J13.

11. Set the TRIGGER switch on Dual Beam Oscilloscope to EXT.

12. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

13. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.

14. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

B. PROCEDURE

1. Set the TRUNNION SLEW CONTROL switch to INCR.

   NOTE: Multiply value obtained for amplitude, backswing, and noise in step B.2 by 4.5 before recording on data sheet. See illustration for definition of pulse characteristics.

2. Synchronize output pulses on Dual Beam Oscilloscope. Record the following pulse characteristics:

   polarity
   amplitude - (volts)
   droop
   width - (at 50% amplitude)
   rise time - (10% - 90% amplitude)
   backswing
   noise level - (volts)

See illustration for definition of pulse characteristics.

3. Set the TRUNNION SLEW CONTROL switch to OFF.

4. Connect the 2X TRUNNION CDU encoder -Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers from jack J22 to jack J25 on Coaxial Distribution Panel and from jack J26 to jack J13.

5. Set the TRUNNION SLEW CONTROL switch to DECR.

6. Repeat steps B.2 and B.3.

7. Connect the SHAFT ANGLE CDU encoder +Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers from jack J23 to jack J25 on Coaxial Distribution Panel and from jack J26 to jack J13.

8. Set the SHAFT SLEW CONTROL switch to INCR.

9. Repeat step B.2.

10. Set SHAFT SLEW CONTROL switch to OFF.

11. Connect the SHAFT ANGLE CDU encoder -Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers from jack J24 to jack J25 on Coaxial Distribution Panel and from jack J26 to jack J13.

12. Set the SHAFT SLEW CONTROL switch to DECR.

13. Repeat steps B.2 and B.10.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:
   - OIA ON
   - OPTICS POWER ON
   - BLOCK I SERIES 100.

   NOTE: Assure that the Dual Beam Oscilloscope and PAVM have been energized at least 15 minutes immediately prior to use in this test.

3. Assure that the following indicators on the Remote Optics Controller are lighted:
   - MANUAL
   - CONTROLLER DIRECT
   - SXT DRIVE DISABLED
   - SCT DRIVE NORMAL.

4. Assure that the following pushbuttons are not lighted:
   - TRACKER
   - TRACKER POWER.

5. Set switches as follows:
   - SLAVE TELESCOPE to STAR LOS
   - COARSE GAIN CONTROL to LOW
   - SHAFT SLEW CONTROL to OFF
   - TRUNNION SLEW CONTROL to OFF.

6. Connect the SXT Trunnion MDA Input to the PAVM by setting the Primary Signal Selector to 106.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 11 JUN 65

JDC 10712 REV C PAGE 2 OF 3

SUBSYSTEM OPTICAL

ASSY

7. Set FREQUENCY switch on PAVM to 800~ No. 1.

8. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to INCR and adjust the FINE GAIN CONTROL until the PAVM indicates 0.117 (±0.050) volts.

9. Set TRUNNION SLEW CONTROL switch to OFF.

10. Connect the 2X TRUNNION CDU encoder +Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers either on Coaxial Distribution Panel from jack J21 to jack J25 and from Jack J26 to jack J13 or on Auxiliary Input Panel from jack J3C to jack J1K and from Jack J1M to jack J1A.

11. Set the TRIGGER switch on Dual Beam Oscilloscope to EXT.

12. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

13. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.

14. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

B. PROCEDURE

1. Set the TRUNNION SLEW CONTROL switch to INCR.

NOTE: Multiply value obtained for amplitude, backswing, and noise in step B.2 by 4.5 before recording on data sheet. See illustration for definition of pulse characteristics.

2. Synchronize output pulses on Dual Beam Oscilloscope. Record the following pulse characteristics:
   - polarity
   - amplitude - (volts)
   - droop
   - width - (at 50% amplitude)
   - rise time - (10% - 90% amplitude)
   - backswing
   - noise level - (volts)

See illustration for definition of pulse characteristics.

3. Set the TRUNNION SLEW CONTROL switch to OFF.

4. Connect the 2X TRUNNION CDU encoder -Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers either on Coaxial Distribution Panel from jack J22 to jack J25 and from jack J26 to jack J13 or on Auxiliary Input Panel from jack J3D to jack J1K and from jack J1M to jack J1A.

5. Set the TRUNNION SLEW CONTROL switch to DECR.

6. Repeat steps B.2 and B.3.

7. Connect the SHAFT ANGLE CDU encoder +Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers either on Coaxial Distribution Panel from jack J23 to jack J25 and from jack J26 to jack J13 or on Auxiliary Input Panel from jack J3A to jack J1K and from jack J1M to jack J1A.

8. Set the SHAFT SLEW CONTROL switch to INCR.

9. Repeat step B.2.

10. Set SHAFT SLEW CONTROL switch to OFF.

11. Connect the SHAFT ANGLE CDU encoder -Δθ output to Channel B1 of Dual Beam Oscilloscope by connecting jumpers either on Coaxial Distribution Panel from jack J24 to jack J25 and from jack J26 to jack J13 or on Auxiliary Input Panel from jack J3B to jack J1K and from jack J1M to J1A.

12. Set the SHAFT SLEW CONTROL switch to DECR.

13. Repeat steps B.2 and B.10.

Remote Optics Controller to light the MANUAL indicator.

B. PROCEDURE

1. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU in the direction of increasing angles to 180.000 (±5)°.

2. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

3. Set switches on Oscillograph Signal Selector panel as follows:

   a. CHANNEL 1 to 11 (2X TRUNNION CDU 16X resolver error)

   b. CHANNEL 2 to 12 (SXT TRUNNION Tachometer)

   c. CHANNEL 3 to 11 (2X TRUNNION CDU Tachometer)

   d. CHANNEL 4 to 12 (SCT TRUNNION 1X resolver error)

   e. CHANNEL 5 to 8 (SXT TRUNNION MDA output)

   f. CHANNEL 6 to 5 (SCT TRUNNION MDA output).

4. Assure that the following indicators are lighted:

   800~ 0 PH REFERENCE

   CH 3 AC

   CH 4 AC

   CH 5 AC

   CH 6 AC.

5. Set CHART DRIVE switch to MM/SEC.

6. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

7. After the 2X TRUNNION CDU has stopped, monitor and record the dial indication.

8. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

9. Monitor oscillograph chart CHANNEL 1 to determine and record the time for the 2X TRUNNION CDU 16X resolver error to reach steady-state.

10. Monitor oscillograph chart CHANNEL 4 to determine and record the time for the SCT Trunnion 1X resolver error to reach steady-state.

11. Monitor oscillograph chart CHANNEL 5 to determine and record the time for the SXT Trunnion MDA output to reach steady-state.

12. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

13. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL, drive the SHAFT ANGLE CDU in the direction of increasing angles to 180.000 (±5)°.

14. Set switches on Oscillograph Signal Selector panel as follows:

   a. CHANNEL 1 to 8 (SXT SHAFT MDA output)

    - TRUNNION SLEW CONTROL to OFF
    - COARSE GAIN CONTROL to HI
    - FINE GAIN CONTROL fully clockwise.

6. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 11 JUN 65

JOB TIME TO ZERO TEST

JDC 10713 **REV** B **PAGE** 2 **OF** 3

SUBSYSTEM OPTICAL

ASSY

B. PROCEDURE

1. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU in the direction of increasing angles to 180.000 (±5)°.

2. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

3. Set switches on Oscillograph Signal Selector panel as follows:
    - a. CHANNEL 1 to 11 (2X TRUNNION CDU 16X resolver error)
    - b. CHANNEL 2 to 12 (SXT TRUNNION Tachometer)
    - c. CHANNEL 3 to 11 (2X TRUNNION CDU Tachometer)
    - d. CHANNEL 4 to 12 (SCT TRUNNION 1X resolver error)
    - e. CHANNEL 5 to 8 (SXT TRUNNION MDA output)
    - f. CHANNEL 6 to 5 (SCT TRUNNION MDA output).

4. Assure that the following indicators are lighted:
    - 800~ 0 PH REFERENCE
    - CH 3 AC
    - CH 4 AC
    - CH 5 AC
    - CH 6 AC.

5. Set following sensitivities on Oscillograph Amplifier panels:
    - CHANNEL 1 - 50 MV/MM
    - CHANNEL 2 - 500 MV/MM
    - CHANNEL 3 - 500 MV/MM
    - CHANNEL 4 - 50 MV/MM
    - CHANNEL 5 - 500 MV/MM
    - CHANNEL 6 - 1000 MV/MM.
        - NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

6. Set CHART DRIVE switch to MM/SEC.

7. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

8. After the 2X TRUNNION CDU has stopped, monitor and record the dial indication.

9. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

10. Monitor oscillograph chart CHANNEL 1 to determine and record the time for the 2X TRUNNION CDU 16X resolver error to reach steady-state.

11. Monitor oscillograph chart CHANNEL 4 to determine and record the time for the SCT Trunnion 1X resolver error to reach steady-state

12. Monitor oscillograph chart CHANNEL 5 to determine and record the time for the SXT Trunnion MDA output to reach steady-state.

ASSY

13. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

14. Using the SHAFT SLEW CONTROL switch and the COARSE and FINE GAIN CONTROL, drive the SHAFT ANGLE CDU in the direction of increasing angles to 180.000 (±5)° and hold the SHAFT ANGLE CDU at that indication.

15. Set switches on Oscillograph Signal Selector panel as follows:
    - a. CHANNEL 1 to 8 (SXT SHAFT MDA output)
    - b. CHANNEL 2 to 11 (SCT SHAFT Tachometer)
    - c. CHANNEL 3 to 13 (SHAFT ANGLE CDU Tachometer)
    - d. CHANNEL 4 to 13 (SCT SHAFT 1X resolver error)
    - e. CHANNEL 5 to 19 (SHAFT ANGLE CDU 16X resolver error)
    - f. CHANNEL 6 to 10 (SXT SHAFT Tachometer).

16. Assure that the following indicators are lighted:
    - 800 ~ 0 PH REFERENCE
    - CH 3 AC
    - CH 4 AC
    - CH 5 AC
    - CH 6 AC.

17. Set following sensitivities on Oscillograph Amplifier panels:
    - CHANNEL 1 - 1000 MV/MM
    - CHANNEL 2 - 500 MV/MM
    - CHANNEL 3 - 500 MV/MM
    - CHANNEL 4 - 50 MV/MM
    - CHANNEL 5 - 50 MV/MM
    - CHANNEL 6 - 500 MV/MM.

18. Set CHART DRIVE switch to MM/SEC.

19. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

20. After the SHAFT ANGLE CDU has stopped, monitor and record the dial indication.

21. Set CHART DRIVE switch on Oscillograph Control panel to OFF.

22. Monitor oscillograph chart CHANNEL 1 to determine and record the time for the SXT Shaft MDA output to reach steady-state.

23. Monitor oscillograph chart CHANNEL 4 to determine and record the time for the SCT Shaft 1X resolver error to reach steady-state.

24. Monitor oscillograph chart CHANNEL 5 to determine and record the time for the SHAFT ANGLE CDU 16X resolver error to reach steady-state.

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

    OIA ON
    OPTICS POWER ON
    BLOCK I SERIES 100.

        NOTE: Assure that the Oscillograph Console and Digital Voltmeter (DVM) have been energized a minimum of 15 minutes prior to use in this test.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

    ZERO OPTICS
    CONTROLLER DIRECT
    SCT DRIVE NORMAL
    SXT DRIVE NORMAL

4. Assure that the following pushbuttons are not lighted:

    TRACKER
    TRACKER POWER.

5. Set switches as follows:

    SHAFT SLEW CONTROL to OFF
    TRUNNION SLEW CONTROL to OFF
    SLAVE TELESCOPE to STAR LOS
    COARSE GAIN CONTROL to HI.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

---

7. Connect the SXT trunnion MDA input to the DVM by setting the Primary Signal Selector to 106.

8. Set switches on Oscillograph Signal Selector panel as follows:

    a. CHANNEL 1 to 11 (2X TRUNNION CDU 16X resolver error)
    b. CHANNEL 2 to 12 (SXT Trunnion Tachometer)
    c. CHANNEL 3 to 11 (2X TRUNNION CDU Tachometer)
    d. CHANNEL 4 to 12 (SCT Trunnion 1X resolver error)
    e. CHANNEL 5 to 8 (SXT Trunnion MDA output)
    f. CHANNEL 6 to 12 (SXT Trunnion MDA input).

9. Assure that the following indicators are lighted:

    800 ~ 0 PH REFERENCE
    CH 3 AC
    CH 4 AC
    CH 5 AC
    CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 1 MV/ MM
    CHANNEL 2 - 50 MV/ MM
    CHANNEL 3 - 50 MV/ MM
    CHANNEL 4 - 1 MV/ MM
    CHANNEL 5 - 100 MV/ MM
    CHANNEL 6 - 50 MV/ MM.

        NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/ HR.

B. PROCEDURE

1. Press the MANUAL/ ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set the TRUNNION SLEW CONTROL switch to INCR.

4. Adjust the FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

    a. Set CHART DRIVE switch on Oscillograph Control panel to MM/ SEC.
    b. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.
    c. Approximately 10 seconds after performing B.5.b., press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

DATE ______

---

    d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

        NOTE: The "Steady State" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

7. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

8. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

9. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 175 (±5) degrees.

10. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

11. Set the TRUNNION SLEW CONTROL switch to DECR.

12. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

13. Repeat step B.5.

14. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

15. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

16. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

17. Set the TRUNNION SLEW CONTROL switch to INCR.

18. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

19. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 5 MV/MM
    CHANNEL 2 - 200 MV/MM
    CHANNEL 3 - 200 MV/MM
    CHANNEL 4 - 1 MV/MM
    CHANNEL 5 - 200 MV/MM
    CHANNEL 6 - 200 MV/MM.

20. Repeat step B.5.

21. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

22. Repeat steps B.7 through B.11.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

DATE ______

---

24. Repeat step B.5.

25. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

26. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

27. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

28. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

29. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 50 MV/MM
    CHANNEL 2 - 1000 MV/MM
    CHANNEL 3 - 1000 MV/MM
    CHANNEL 4 - 50 MV/MM
    CHANNEL 5 - 1000 MV/MM
    CHANNEL 6 - 500 MV/MM.

30. Repeat Step B.5.

31. Record time for the 2X TRUNNION CDU 16X resolver error signal to reach:

    a. The first zero crossover
    b. Steady state, from Oscillograph Chart (CHANNEL 1).

32. Record time for the SXT trunnion tachometer signal to reach steady state, from Oscillograph Chart (CHANNEL 2).

33. Record time for SCT trunnion 1X resolver error signal to reach:

    a. The first zero crossover
    b. Steady state, from Oscillograph Chart (CHANNEL 4).

34. Repeat steps B.7 through B.11.

35. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

36. Repeat steps B.5, B.31 through B.33.

37. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 90 (±5) degrees.

40. Set the COARSE GAIN CONTROL switch to LO and the FINE GAIN CONTROL fully counterclockwise.

41. Set CHANNEL 5 switch on the Oscillograph Signal Selector panel to 11 (SCT Trunnion Tachometer).

42. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 1 MV/MM
    CHANNEL 2 - 2 MV/MM
    CHANNEL 3 - 1 MV/MM
    CHANNEL 4 - 1 MV/MM
    CHANNEL 5 - 1 MV/MM
    CHANNEL 6 - 1 MV/MM.

43. Set the FILTER switches on CHANNEL 2, CHANNEL 3, and CHANNEL 5 DEMOD's to LO.

44. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

45. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the 2X TRUNNION CDU stops moving. Determine value of SXT trunnion tachometer signal from CHANNEL 2 of Oscillograph Chart.

NOTE: Deflection of the Oscillograph pen to the right indicates an increasing signal.

46. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts above the value determined in step B.45.

47. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

48. Set the TRUNNION SLEW CONTROL switch to OFF.

49. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:
- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3).

50. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:
- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3).

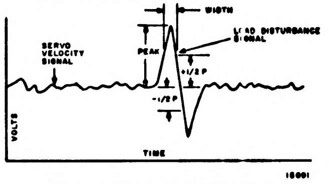

Figure 1. Tachometer Signals During Smoothness Test

51. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

52. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts below the value determined in step B.45.

53. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

54. Set TRUNNION SLEW CONTROL switch to OFF.

55. Repeat step B.49 and B.50.

56. Set switch on Oscillograph Signal Selector as follows:
- a. CHANNEL 1 to OFF

DATE ________

SUBSYSTEM OPTICAL | ASSY

- b. CHANNEL 2 to OFF
- c. CHANNEL 3 to OFF
- d. CHANNEL 4 to 12 (SCT Trunnion MDA Input)
- e. CHANNEL 5 to 11 (SCT Trunnion Tachometer)
- f. CHANNEL 6 to 5 (SCT Trunnion MDA Output).

57. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - OFF
CHANNEL 2 - OFF
CHANNEL 3 - OFF
CHANNEL 4 - 1000 MV/MM
CHANNEL 5 - 1000 MV/MM
CHANNEL 6 - 1000 MV/MM.

58. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE DISABLED indicator.

59. Set switches as follows:

COARSE GAIN CONTROL to HI
TRUNNION SLEW CONTROL to INCR.

60. Adjust FINE GAIN CONTROL until DVM indicates 10.0 (±0.2) volts.

61. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE to CM/HR.

62. Perform following steps in sequence:
- a. Set CHART DRIVE switch on Oscillograph Control Panel to MM/SEC.
- b. Press the TRACKER pushbutton on the Remote Optics Controller. The pushbutton shall light.
- c. Approximately 10 seconds after performing B.62.b press the TRACKER pushbutton. The pushbutton shall go out.
- d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

63. Record time for SCT Trunnion Tachometer output to reach steady state from Oscillograph Chart (CHANNEL 5).

64. Set the FILTER switch on CHANNEL 5 DEMOD to LO.

65. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

66. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

67. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

68. Press the TRACKER pushbutton on the Remote Optics Controller. The pushbutton shall light.

69. Set the TRUNNION SLEW CONTROL switch to either INCR or DECR, as necessary, and adjust FINE GAIN CONTROL until the SCT trunnion panel angle counter stops moving. Determine value of SCT Trunnion Tachometer signal from CHANNEL 5 of the Oscillograph Chart.

DATE ________

SUBSYSTEM OPTICAL | ASSY

70. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 5 until its nominal value is 8 millivolts above the value determined in step B.69.

71. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

72. Set the TRUNNION SLEW CONTROL switch to OFF.

73. Record:
- a. The maximum peak-to-peak variation in the Servo Velocity Signal (see figure 1).
- b. The signal width of the Load Disturbance Signal at approximately 1/2 positive peak and 1/2 negative peak (see figure 1) of the SCT trunnion tachometer signal from Oscillograph Chart CHANNEL 5.

74. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

75. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 5 until its nominal value is 8 millivolts below the value determined in step B.69.

76. Repeat steps B.71 through B.73.

REFERENCES ATP 1009502, Paragraph 3-3.11 and JDC 10734.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

   OIA ON

   OPTICS POWER ON

   BLOCK I SERIES 100.

   NOTE: Assure that the Oscillograph Console and Digital Voltmeter (DVM) have been energized a minimum of 15 minutes prior to use in this test.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

   ZERO OPTICS

   CONTROLLER DIRECT

   SCT DRIVE NORMAL

   SXT DRIVE NORMAL

4. Assure that the following pushbuttons are not lighted:

   TRACKER

   TRACKER POWER.

5. Set switches as follows:

   SHAFT SLEW CONTROL to OFF

   TRUNNION SLEW CONTROL to OFF

   SLAVE TELESCOPE to STAR LOS

   COARSE GAIN CONTROL to HI.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

7. Connect the SXT trunnion MDA input to the DVM by setting the Primary Signal Selector to 106.

8. Set switches on Oscillograph Signal Selector panel as follows:

   a. CHANNEL 1 to 11 (2X TRUNNION CDU 16X resolver error)

   b. CHANNEL 2 to 12 (SXT Trunnion Tachometer)

   c. CHANNEL 3 to 11 (2X TRUNNION CDU Tachometer)

   d. CHANNEL 4 to 12 (SCT Trunnion 1X resolver error)

   e. CHANNEL 5 to 8 (SXT Trunnion MDA output)

   f. CHANNEL 6 to 12 (SXT Trunnion MDA input).

9. Assure that the following indicators are lighted:

   800 ~ 0 PH REFERENCE

   CH 3 AC

   CH 4 AC

   CH 5 AC

   CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

   CHANNEL 1 - 1 MV/MM

   CHANNEL 2 - 50 MV/MM

   CHANNEL 3 - 50 MV/MM

   CHANNEL 4 - 1 MV/MM

   CHANNEL 5 - 100 MV/MM

   CHANNEL 6 - 50 MV/MM.

   NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set the TRUNNION SLEW CONTROL switch to INCR.

4. Adjust the FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

   a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

   b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

   c. Approximately 10 seconds after performing B.5.b., press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

   d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

   NOTE: The "Steady State" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

7. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

8. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

9. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 175 (±5) degrees.

10. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

11. Set the TRUNNION SLEW CONTROL switch to DECR.

12. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

13. Repeat step B.5.

14. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

15. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

16. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

17. Set the TRUNNION SLEW CONTROL switch to INCR.

18. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

19. Set following sensitivities on Oscillograph Amplifier panels:

   CHANNEL 1 - 5 MV/MM

   CHANNEL 2 - 200 MV/MM

   CHANNEL 3 - 200 MV/MM

   CHANNEL 4 - 1 MV/MM

   CHANNEL 5 - 200 MV/MM

   CHANNEL 6 - 200 MV/MM.

20. Repeat step B.5.

21. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

22. Repeat steps B.7 through B.11.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

24. Repeat step B.5.

25. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

26. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

27. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

28. Set the TRUNNION SLEW CONTROL switch to INCR and adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

29. Set following sensitivities on Oscillograph Amplifier panels:

   CHANNEL 1 - 50 MV/MM

   CHANNEL 2 - 1000 MV/MM

   CHANNEL 3 - 1000 MV/MM

   CHANNEL 4 - 50 MV/MM

   CHANNEL 5 - 1000 MV/MM

   CHANNEL 6 - 500 MV/MM.

30. Repeat Step B.5.

31. Record time for the 2X TRUNNION CDU 16X resolver error signal to reach:

   a. The first zero crossover

   b. Steady state, from Oscillograph Chart (CHANNEL 1).

32. Record time for the SXT trunnion tachometer signal to reach steady state, from Oscillograph Chart (CHANNEL 2).

33. Record time for SCT trunnion 1X resolver error signal to reach:

   a. The first zero crossover

   b. Steady state, from Oscillograph Chart (CHANNEL 4).

34. Repeat steps B.7 through B.11.

35. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

36. Repeat steps B.5, B.31 through B.33.

37. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 90 (±5) degrees.

40. Set the COARSE GAIN CONTROL switch to LO and the FINE GAIN CONTROL fully counterclockwise.

41. Set CHANNEL 5 switch on the Oscillograph Signal Selector panel to 11 (SCT Trunnion Tachometer).

42. Set following sensitivities on Oscillograph Amplifier panels:

   CHANNEL 1 - 1 MV/MM

   CHANNEL 2 - 2 MV/MM

   CHANNEL 3 - 1 MV/MM

   CHANNEL 4 - 1 MV/MM

   CHANNEL 5 - 1 MV/MM

   CHANNEL 6 - 1 MV/MM.

43. Set the FILTER switches on CHANNEL 2, CHANNEL 3, and CHANNEL 5 DEMOD's to LO.

44. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

45. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the 2X TRUNNION CDU stops moving. Determine value of SXT trunnion tachometer signal from CHANNEL 2 of Oscillograph Chart.

NOTE: Deflection of the Oscillograph pen to the right indicates an increasing signal.

46. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts above the value determined in step B.45.

47. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

48. Set the TRUNNION SLEW CONTROL switch to OFF.

49. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:
- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3).

50. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:
- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3).

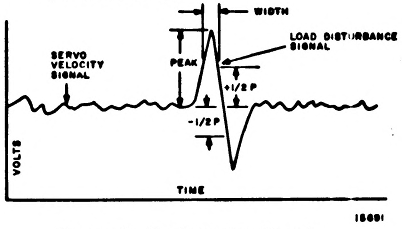

Figure 1. Tachometer Signals During Smoothness Test

51. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

52. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts below the value determined in step B.45.

53. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

54. Set TRUNNION SLEW CONTROL switch to OFF.

55. Repeat step B.49 and B.50.

56. Set switch on Oscillograph Signal Selector as follows:
- a. CHANNEL 1 to OFF

- b. CHANNEL 2 to OFF
- c. CHANNEL 3 to OFF
- d. CHANNEL 4 to 12 (SCT Trunnion MDA Input)
- e. CHANNEL 5 to 11 (SCT Trunnion Tachometer)
- f. CHANNEL 6 to 5 (SCT Trunnion MDA Output).

57. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - OFF
CHANNEL 2 - OFF
CHANNEL 3 - OFF
CHANNEL 4 - 1000 MV/MM
CHANNEL 5 - 1000 MV/MM
CHANNEL 6 - 1000 MV/MM.

58. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE DISABLED indicator.

59. Set switches as follows:

COARSE GAIN CONTROL to HI
TRUNNION SLEW CONTROL to INCR.

60. Adjust FINE GAIN CONTROL until DVM indicates 10.0 (±0.2) volts.

61. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE to CM/HR.

62. Perform following steps in sequence:
- a. Set CHART DRIVE switch on Oscillograph Control Panel to MM/SEC.
- b. Press the TRACKER pushbutton on the Remote Optics Controller. The pushbutton shall light.
- c. Approximately 10 seconds after performing B.62.b press the TRACKER pushbutton. The pushbutton shall go out.
- d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

63. Record time for SCT Trunnion Tachometer output to reach steady state from Oscillograph Chart (CHANNEL 5).

64. Set the FILTER switch on CHANNEL 5 DEMOD to LO.

65. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

66. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

67. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

68. Press the TRACKER pushbutton on the Remote Optics Controller. The pushbutton shall light.

69. Set the TRUNNION SLEW CONTROL switch to either INCR or DECR, as necessary, and adjust FINE GAIN CONTROL until the SCT trunnion panel angle counter stops moving. Determine value of SCT Trunnion Tachometer signal from CHANNEL 5 of the Oscillograph Chart.

---

70. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 5 until its nominal value is 8 millivolts above the value determined in step B.69.

71. Press CHART SPEEDS 20 pushbutton on the Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

72. Set the TRUNNION SLEW CONTROL switch to OFF.

73. Record:
- a. The maximum peak-to-peak variation in the Servo Velocity Signal (see figure 1).
- b. The signal width of the Load Disturbance Signal at approximately 1/2 positive peak and 1/2 negative peak (see figure 1) of the SCT trunnion tachometer signal from Oscillograph Chart CHANNEL 5.

74. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

75. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 5 until its nominal value is 8 millivolts below the value determined in step B.69.

76. Repeat steps B.71 through B.73.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON

OPTICS POWER ON

BLOCK I SERIES 100.

NOTE: Assure that the Oscillograph Console and Digital Voltmeter (DVM) have been energized a minimum of 15 minutes prior to use in this test.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

ZERO OPTICS

CONTROLLER DIRECT

SCT DRIVE NORMAL

SXT DRIVE NORMAL

4. Assure that the following pushbuttons are not lighted:

TRACKER

TRACKER POWER.

5. Set switches as follows:

SHAFT SLEW CONTROL to OFF

TRUNNION SLEW CONTROL to OFF

SLAVE TELESCOPE to STAR LOS

COARSE GAIN CONTROL to HI.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

JDC 10714 REV C PAGE 2 OF 5

SUBSYSTEM OPTICAL

ASSY

7. Connect the SXT trunnion MDA input to the DVM by setting the Primary Signal Selector to 106.

8. Set switches on Oscillograph Signal Selector panel as follows:

a. CHANNEL 1 to 11 (2X TRUNNION CDU 16X resolver error)

b. CHANNEL 2 to 12 (SXT Trunnion Tachometer)

c. CHANNEL 3 to 11 (2X TRUNNION CDU Tachometer)

d. CHANNEL 4 to 12 (SCT Trunnion 1X resolver error)

e. CHANNEL 5 to 8 (SXT Trunnion MDA output)

f. CHANNEL 6 to 12 (SXT Trunnion MDA input).

9. Assure that the following indicators are lighted:

800 ~ 0 PH REFERENCE

CH 3 AC

CH 4 AC

CH 5 AC

CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1 MV/MM

CHANNEL 2 - 50 MV/MM

CHANNEL 3 - 50 MV/MM

CHANNEL 4 - 1 MV/MM

CHANNEL 5 - 100 MV/MM

CHANNEL 6 - 50 MV/MM.

NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set the TRUNNION SLEW CONTROL switch to INCR.

4. Adjust the FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

c. Approximately 10 seconds after performing B.5.b., press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

DATE 11 JUN 65

JOB TRUNNION SERVO LOOP TEST

JDC 10714 REV C PAGE 3 OF 5

SUBSYSTEM OPTICAL

ASSY

d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

NOTE: The "Steady State" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

7. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

8. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

9. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 175 (±5) degrees.

10. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

11. Set the TRUNNION SLEW CONTROL switch to DECR.

12. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

13. Repeat step B.5.

14. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

15. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

16. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

17. Set the TRUNNION SLEW CONTROL switch to INCR.

18. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

19. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 5 MV/MM

CHANNEL 2 - 200 MV/MM

CHANNEL 3 - 200 MV/MM

CHANNEL 4 - 1 MV/MM

CHANNEL 5 - 200 MV/MM

CHANNEL 6 - 200 MV/MM.

20. Repeat step B.5.

21. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

22. Repeat steps B.7 through B.11.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

DATE 11 JUN 65

JOB TRUNNION SERVO LOOP TEST

JDC 10714 REV C PAGE 4 OF 5

SUBSYSTEM OPTICAL

ASSY

24. Repeat step B.5.

25. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

26. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

27. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

28. Set the TRUNNION SLEW CONTROL switch to INCR and adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

29. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 50 MV/MM

CHANNEL 2 - 1000 MV/MM

CHANNEL 3 - 1000 MV/MM

CHANNEL 4 - 50 MV/MM

CHANNEL 5 - 1000 MV/MM

CHANNEL 6 - 500 MV/MM.

30. Repeat Step B.5.

31. Record time for the 2X TRUNNION CDU 16X resolver error signal to reach:

a. The first zero crossover

b. Steady state, from Oscillograph Chart (CHANNEL 1).

32. Record time for the SXT trunnion tachometer signal to reach steady state, from Oscillograph Chart (CHANNEL 2).

33. Record time for SCT trunnion 1X resolver error signal to reach:

a. The first zero crossover

b. Steady state, from Oscillograph Chart (CHANNEL 4).

34. Repeat steps B.7 through B.11.

35. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

36. Repeat steps B.5, B.31 through B.33.

37. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 90 (±5) degrees.

40. Set the COARSE GAIN CONTROL switch to LO and the FINE GAIN CONTROL fully counterclockwise.

41. Set CHANNEL 5 switch on the Oscillograph Signal Selector panel to 11 (SCT Trunnion Tachometer).

42. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1 MV/MM

CHANNEL 2 - 2 MV/MM

CHANNEL 3 - 1 MV/MM

CHANNEL 4 - 1 MV/MM

CHANNEL 5 - 1 MV/MM

CHANNEL 6 - 1 MV/MM.

DATE 11 JUN 65

JOB TRUNNION SERVO LOOP TEST | JDC 10714 REV B PAGE 5 OF 5

SUBSYSTEM OPTICAL | ASSY

43. Set the FILTER switches on CHANNEL 2, CHANNEL 3, and CHANNEL 5 DEMOD's to LO.

44. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

45. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the 2X TRUNNION CDU stops moving. Determine value of SXT trunnion tachometer signal from CHANNEL 2 of Oscillograph Chart.

NOTE: Deflection of the Oscillograph pen to the right indicates an increasing signal.

46. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts above the value determined in step B.45.

47. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

48. Set the TRUNNION SLEW CONTROL switch to OFF.

49. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:

- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3).

50. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:

- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3).

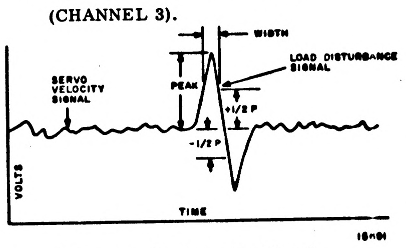

Figure 1. Tachometer Signals During Smoothness Test

51. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

52. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts below the value determined in step B.45.

53. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

54. Set TRUNNION SLEW CONTROL switch to OFF.

55. Repeat step B.49 and B.50.

56. thru B.76. (Deleted)

SLAVE TELESCOPE to STAR LOS
COARSE GAIN CONTROL to HI.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

---

7. Connect the SXT trunnion MDA input to the DVM by setting the Primary Signal Selector to 106.

8. Press the MANUAL/ ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.

9. Set switches on Oscillograph Signal Selector panel as follows:

   a. CHANNEL 1 to 11 (2X TRUNNION CDU 16X resolver error)
   b. CHANNEL 2 to 12 (SXT Trunnion Tachometer)
   c. CHANNEL 3 to 11 (2X TRUNNION CDU Tachometer)
   d. CHANNEL 4 to 12 (SCT Trunnion 1X resolver error)
   e. CHANNEL 5 to 8 (SXT Trunnion MDA output)
   f. CHANNEL 6 to 12 (SXT Trunnion MDA input).

10. Assure that the following indicators are lighted:

800 ~ 0 PH REFERENCE
CH 3 AC
CH 4 AC
CH 5 AC
CH 6 AC.

11. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1 MV/ MM
CHANNEL 2 - 50 MV/ MM
CHANNEL 3 - 50 MV/ MM
CHANNEL 4 - 1 MV/ MM
CHANNEL 5 - 100 MV/ MM
CHANNEL 6 - 50 MV/ MM.

NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

12. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/ HR.

B. PROCEDURE

1. Press the MANUAL/ ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set the TRUNNION SLEW CONTROL switch to INCR.

4. Adjust the FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

   a. Set CHART DRIVE switch on Oscillograph Control panel to MM/ SEC.
   b. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.
   c. Approximately 10 seconds after performing B.5.b., press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

DATE ______

---

   d. Set CHART DRIVE switch on Oscillograph Control panel to CM/ HR.

6. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

7. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

8. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

9. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 175 (±5) degrees.

10. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

11. Set the TRUNNION SLEW CONTROL switch to DECR.

12. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.84 volts. Record DVM voltage indication.

13. Repeat step B.5.

14. Record 2X TRUNNION CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 1).

15. Press the MANUAL/ ZERO OPTICS pushbutton on Remote Optics Controller to light the ZERO OPTICS indicator.

16. After the CDU's have zeroed, press the MANUAL/ ZERO OPTICS pushbutton to light the MANUAL indicator.

17. Set the TRUNNION SLEW CONTROL switch to INCR.

18. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

19. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 5 MV/ MM
CHANNEL 2 - 200 MV/ MM
CHANNEL 3 - 200 MV/ MM
CHANNEL 4 - 1 MV/ MM
CHANNEL 5 - 200 MV/ MM
CHANNEL 6 - 200 MV/ MM.

20. Repeat step B.5.

21. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

22. Repeat steps B.7 through B.11.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 3.58 volts. Record DVM voltage indication.

24. Repeat step B.5.

25. Record SCT TRUNNION 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

26. Press the MANUAL/ ZERO OPTICS pushbutton on Remote Optics Controller to light the ZERO OPTICS indicator.

27. After the CDU's have zeroed, press the MANUAL/ ZERO OPTICS pushbutton to light the MANUAL indicator.

DATE ______

---

28. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

29. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 10 MV/ MM
CHANNEL 2 - 1000 MV/ MM
CHANNEL 3 - 1000 MV/ MM
CHANNEL 4 - 10 MV/ MM
CHANNEL 5 - 1000 MV/ MM
CHANNEL 6 - 500 MV/ MM.

30. Repeat step B.5.

31. Record time for the 2X TRUNNION CDU 16X resolver error signal to reach steady state, from Oscillograph Chart (CHANNEL 1).

32. Record time for the SXT trunnion tachometer signal to reach steady state, from Oscillograph Chart (CHANNEL 2).

33. Record time for SCT trunnion 1X resolver error signal to reach steady state, from Oscillograph Chart (CHANNEL 4).

34. Repeat steps B.7 through B.11.

35. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

36. Repeat steps B.5, B.31 through B.33.

37. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to OFF.

38. Press the SXT DRIVE NORMAL/ SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL, drive the 2X TRUNNION CDU to 90 (±5) degrees.

40. Set the COARSE GAIN CONTROL switch to LO and the FINE GAIN CONTROL fully counterclockwise.

41. Set CHANNEL 5 switch on the Oscillograph Signal Selector panel to 11 (SCT Trunnion Tachometer).

42. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1 MV/ MM
CHANNEL 2 - 2 MV/ MM
CHANNEL 3 - 1 MV/ MM
CHANNEL 4 - 1 MV/ MM
CHANNEL 5 - 1 MV/ MM
CHANNEL 6 - 1 MV/ MM.

43. Set the FILTER switches on CHANNEL 2, CHANNEL 3, and CHANNEL 5 DEMOD's to LO.

44. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/ SEC.

45. Set the TRUNNION SLEW CONTROL switch on the Remote Optics Controller to either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the 2X TRUNNION CDU stops moving. Determine value of SXT trunnion tachometer signal from CHANNEL 2 of Oscillograph Chart.

DATE ______

NOTE: Deflection of the Oscillograph pen to the right indicates an increasing signal.

46. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts above the value determined in step B.45.

47. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

48. Set the TRUNNION SLEW CONTROL switch to OFF.

49. Record the maximum peak-to-peak variation of the following signals:
- a. SXT trunnion tachometer (CHANNEL 2)
- b. 2X TRUNNION CDU tachometer (CHANNEL 3)
- c. SCT trunnion tachometer (CHANNEL 5).

50. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

51. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 2 until its nominal value is 7 millivolts below the value determined in step B.45.

52. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

53. Set TRUNNION SLEW CONTROL switch to OFF.

54. Repeat step B.49.

55. Set switches on Oscillograph Signal Selector as follows:
- a. CHANNEL 1 to OFF
- b. CHANNEL 2 to OFF
- c. CHANNEL 3 to OFF
- d. CHANNEL 4 to 12 (SCT Trunnion MDA Input)
- e. CHANNEL 5 to 11 (SCT Trunnion Tachometer)
- f. CHANNEL 6 to 5 (SCT Trunnion MDA Output).

56. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - OFF
CHANNEL 2 - OFF
CHANNEL 3 - OFF
CHANNEL 4 - 1000 MV/MM
CHANNEL 5 - 1000 MV/MM
CHANNEL 6 - 1000 MV/MM.

57. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE DISABLED indicator.

58. Set switches as follows:

COARSE GAIN CONTROL to HI
TRUNNION SLEW CONTROL to INCR.

59. Adjust FINE GAIN CONTROL until DVM indicates 10.0 (±0.2) volts.

DATE ________

---

60. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE to CM/HR.

61. Perform following steps in sequence:
- a. Set CHART DRIVE switch on Oscillograph Control Panel to MM/SEC.
- b. Press the TRACKER pushbutton on the Remote Optics Controller. The pushbutton shall light.
- c. Approximately 10 seconds after performing B.61.b., press the TRACKER pushbutton. The pushbutton shall go out.
- d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

62. Record value of SCT Trunnion Tachometer steady state signal from Oscillograph Chart (CHANNEL 5).

63. Record time for SCT Trunnion Tachometer output to reach steady state from Oscillograph Chart (CHANNEL 5).

64. Set the FILTER switch on CHANNEL 5 DEMOD to LO.

65. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

66. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

67. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

68. Press the TRACKER pushbutton on the Remote Optics Controller. The pushbutton shall light.

69. Set the TRUNNION SLEW CONTROL switch to either INCR or DECR, as necessary, and adjust FINE GAIN CONTROL until the SCT trunnion panel angle counter stops moving. Determine value of SCT Trunnion Tachometer signal from CHANNEL 5 of the Oscillograph Chart.

70. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 5 until its nominal value is 8 millivolts above the value determined in step B.69.

71. Press CHART SPEEDS 10 pushbutton on the Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

72. Set the TRUNNION SLEW CONTROL switch to OFF.

73. Record the maximum peak-to-peak variation of the SCT trunnion tachometer signal from Oscillograph Chart CHANNEL 5.

74. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

75. Using the TRUNNION SLEW CONTROL switch and the FINE GAIN CONTROL on the

DATE ________

Remote Optics Controller, decrease the tachometer signal on CHANNEL 5 until its nominal value is 8 millivolts below the value determined in step B.69.

76. Repeat steps B.71 through B.73.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON
OPTICS POWER ON
BLOCK 1 SERIES 100.

NOTE: Assure that the Oscillograph Console and Digital Voltmeter (DVM) have been energized a minimum of 15 minutes immediately prior to use in this test.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

ZERO OPTICS
CONTROLLER DIRECT
SCT DRIVE NORMAL
SXT DRIVE NORMAL

4. Assure that the following pushbuttons are not lighted:

TRACKER
TRACKER POWER.

5. Set switches as follows:

SHAFT SLEW CONTROL to OFF
TRUNNION SLEW CONTROL to OFF
SLAVE TELESCOPE to STAR LOS
COARSE GAIN CONTROL to MED.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ______

---

7. Connect the SXT Shaft MDA Input to the DVM by setting the Primary Signal Selector to 203.

8. Set switches on Oscillograph Signal Selector panel as follows:

a. CHANNEL 1 to 8 (SXT shaft MDA Output)

b. CHANNEL 2 to 13 (SXT shaft MDA input)

c. CHANNEL 3 to 13 (SHAFT ANGLE CDU tachometer)

d. CHANNEL 4 to 13 (SCT shaft 1X resolver error)

e. CHANNEL 5 to 10 (SHAFT ANGLE CDU 16X resolver error)

f. CHANNEL 6 to 10 (SXT shaft tachometer).

9. Assure that the following indicators are lighted:

800~ 0 PH REFERENCE
CH 3 AC
CH 4 AC
CH 5 AC
CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 100 MV/MM
CHANNEL 2 - 100 MV/MM
CHANNEL 3 - 100 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 100 MV/MM.

NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set SHAFT SLEW CONTROL switch to INCR.

4. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.606 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

c. Approximately 10 seconds after performing step B.5.b, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

DATE ______

NOTE: The "steady state" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

7. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

8. Record DVM voltage indication.

9. Repeat step B.5.

10. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

11. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on the Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

12. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

13. Set switches as follows:

COARSE GAIN CONTROL to HI
SHAFT SLEW CONTROL to INCR.

14. Adjust the FINE GAIN CONTROL until DVM indicates approximately 1.82 volts. Record DVM voltage indication.

15. Set the following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 200 MV/MM
CHANNEL 2 - 200 MV/MM
CHANNEL 3 - 200 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 5 MV/MM
CHANNEL 6 - 200 MV/MM.

16. Repeat step B.5.

17. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

18. Repeat steps B.7 and B.8.

19. Repeat step B.5.

20. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

21. Repeat steps B.11 and B.12.

22. Set SHAFT SLEW CONTROL switch to INCR.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

24. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1000 MV/MM
CHANNEL 2 - 500 MV/MM

DATE ______

CHANNEL 3 - 1000 MV/MM
CHANNEL 4 - 50 MV/MM
CHANNEL 5 - 50 MV/MM
CHANNEL 6 - 1000 MV/MM.

25. Repeat step B.5.

26. Record time for the SXT shaft tachometer output to reach steady state, from Oscillograph Chart (CHANNEL 6).

27. Record time for the SCT shaft 1X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 4).

28. Record time for the SHAFT ANGLE CDU 16X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 5).

29. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

30. Record DVM voltage indication.

31. Repeat steps B.5, B.26, B.27 and B.28.

32. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

33. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 20 MV/MM
CHANNEL 2 - 1 MV/MM
CHANNEL 3 - 1 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

34. Set the FILTER switches on CHANNEL 4, CHANNEL 5, and CHANNEL 6 DEMOD's to LO.

35. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

36. Set CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 (SCT shaft tachometer).

37. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

40. Set the SHAFT SLEW CONTROL switch on either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the SHAFT ANGLE CDU stops moving. Determine value of SXT shaft tachometer signal from CHANNEL 6 of the Oscillograph Chart.

NOTE: Deflection of the Oscillograph to the right indicates an increasing signal.

41. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts above the value determined in step B.40.

DATE ______

SUBSYSTEM OPTICAL | ASSY

42. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

43. Set the SHAFT SLEW CONTROL switch to OFF.

44. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:

- a. SCT shaft tachometer (CHANNEL 1)
- b. SHAFT ANGLE CDU tachometer (CHANNEL 3)
- c. SXT shaft tachometer (CHANNEL 6).

45. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:

- a. SCT shaft tachometer (CHANNEL 1)
- b. SHAFT ANGLE CDU tachometer (CHANNEL 3)
- c. SXT shaft tachometer (CHANNEL 6)

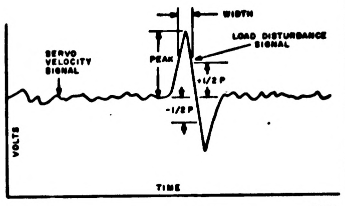

Figure 1

Tachometer Signals During Smoothness Test

46. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

47. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts below the value determined in step B.40.

48. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

49. Set the SHAFT SLEW CONTROL switch to OFF.

50. Repeat step B.44.

JDC 10715 REV B PAGE 2 OF 5
SUBSYSTEM OPTICAL
ASSY

7. Connect the SXT Shaft MDA Input to the DVM by setting the Primary Signal Selector to 203.

8. Set switches on Oscillograph Signal Selector panel as follows:

a. CHANNEL 1 to 8 (SXT shaft MDA Output)

b. CHANNEL 2 to 13 (SXT shaft MDA input)

c. CHANNEL 3 to 13 (SHAFT ANGLE CDU tachometer)

d. CHANNEL 4 to 13 (SCT shaft 1X resolver error)

e. CHANNEL 5 to 10 (SHAFT ANGLE CDU 16X resolver error)

f. CHANNEL 6 to 10 (SXT shaft tachometer).

9. Assure that the following indicators are lighted:

800~ 0 PH REFERENCE
CH 3 AC
CH 4 AC
CH 5 AC
CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 100 MV/MM
CHANNEL 2 - 100 MV/MM
CHANNEL 3 - 100 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 100 MV/MM.

NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set SHAFT SLEW CONTROL switch to INCR.

4. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.606 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

c. Approximately 10 seconds after performing step B.5.b, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

DATE 11 JUN 65

JDC 10715 REV B PAGE 3 OF 5
SUBSYSTEM OPTICAL
ASSY

NOTE: The "steady state" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

7. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

8. Record DVM voltage indication.

9. Repeat step B.5.

10. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

11. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on the Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

12. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

13. Set switches as follows:

COARSE GAIN CONTROL to HI
SHAFT SLEW CONTROL to INCR.

14. Adjust the FINE GAIN CONTROL until DVM indicates approximately 1.82 volts. Record DVM voltage indication.

15. Set the following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 200 MV/MM
CHANNEL 2 - 200 MV/MM
CHANNEL 3 - 200 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 5 MV/MM
CHANNEL 6 - 200 MV/MM.

16. Repeat step B.5.

17. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

18. Repeat steps B.7 and B.8.

19. Repeat step B.5.

20. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

21. Repeat steps B.11 and B.12.

22. Set SHAFT SLEW CONTROL switch to INCR.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

24. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1000 MV/MM
CHANNEL 2 - 500 MV/MM

DATE 11 JUN 65

JOB SHAFT SERVO LOOP TEST
JDC 10715 REV B PAGE 4 OF 5
SUBSYSTEM OPTICAL
ASSY

CHANNEL 3 - 1000 MV/MM
CHANNEL 4 - 50 MV/MM
CHANNEL 5 - 50 MV/MM
CHANNEL 6 - 1000 MV/MM.

25. Repeat step B.5.

26. Record time for the SXT shaft tachometer output to reach steady state, from Oscillograph Chart (CHANNEL 6).

27. Record time for the SCT shaft 1X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 4).

28. Record time for the SHAFT ANGLE CDU 16X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 5).

29. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

30. Record DVM voltage indication.

31. Repeat steps B.5, B.26, B.27 and B.28.

32. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

33. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 20 MV/MM
CHANNEL 2 - 1 MV/MM
CHANNEL 3 - 1 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

34. Set the FILTER switches on CHANNEL 4, CHANNEL 5, and CHANNEL 6 DEMOD's to LO.

35. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

36. Set CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 (SCT shaft tachometer).

37. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

40. Set the SHAFT SLEW CONTROL switch on either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the SHAFT ANGLE CDU stops moving. Determine value of SXT shaft tachometer signal from CHANNEL 6 of the Oscillograph Chart.

NOTE: Deflection of the Oscillograph to the right indicates an increasing signal.

41. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts above the value determined in step B.40.

DATE 11 JUN 65

SUBSYSTEM OPTICAL | ASSY

42. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

43. Set the SHAFT SLEW CONTROL switch to OFF.

44. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:

a. SCT shaft tachometer (CHANNEL 1)

b. SHAFT ANGLE CDU tachometer (CHANNEL 3)

c. SXT shaft tachometer (CHANNEL 6).

45. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:

a. SCT shaft tachometer (CHANNEL 1)

b. SHAFT ANGLE CDU tachometer (CHANNEL 3)

c. SXT shaft tachometer (CHANNEL 6)

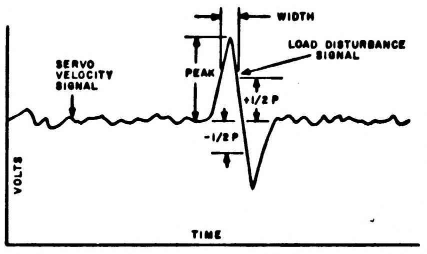

Figure 1

Tachometer Signals During Smoothness Test

46. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

47. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts below the value determined in step B.40.

48. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

49. Set the SHAFT SLEW CONTROL switch to OFF.

50. Repeat step B.44.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON
OPTICS POWER ON
BLOCK 1 SERIES 100.

NOTE: Assure that the Oscillograph Console and Digital Voltmeter (DVM) have been energized a minimum of 15 minutes immediately prior to use in this test.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

ZERO OPTICS
CONTROLLER DIRECT
SCT DRIVE NORMAL
SXT DRIVE NORMAL

4. Assure that the following pushbuttons are not lighted:

TRACKER
TRACKER POWER.

5. Set switches as follows:

SHAFT SLEW CONTROL to OFF
TRUNNION SLEW CONTROL to OFF
SLAVE TELESCOPE to STAR LOS
COARSE GAIN CONTROL to MED.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

7. Connect the SXT Shaft MDA Input to the DVM by setting the Primary Signal Selector to 203.

8. Set switches on Oscillograph Signal Selector panel as follows:

a. CHANNEL 1 to 8 (SXT shaft MDA Output)

b. CHANNEL 2 to 13 (SXT shaft MDA input)

c. CHANNEL 3 to 13 (SHAFT ANGLE CDU tachometer)

d. CHANNEL 4 to 13 (SCT shaft 1X resolver error)

e. CHANNEL 5 to 10 (SHAFT ANGLE CDU 16X resolver error)

f. CHANNEL 6 to 10 (SXT shaft tachometer).

9. Assure that the following indicators are lighted:

800~ 0 PH REFERENCE
CH 3 AC
CH 4 AC
CH 5 AC
CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 100 MV/MM
CHANNEL 2 - 100 MV/MM
CHANNEL 3 - 100 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 100 MV/MM.

NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set SHAFT SLEW CONTROL switch to INCR.

4. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.606 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

c. Approximately 10 seconds after performing step B.5.b, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

NOTE: The "steady state" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

7. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

8. Record DVM voltage indication.

9. Repeat step B.5.

10. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

11. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on the Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

12. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

13. Set switches as follows:

COARSE GAIN CONTROL to HI
SHAFT SLEW CONTROL to INCR.

14. Adjust the FINE GAIN CONTROL until DVM indicates approximately 1.82 volts. Record DVM voltage indication.

15. Set the following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 200 MV/MM
CHANNEL 2 - 200 MV/MM
CHANNEL 3 - 200 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 5 MV/MM
CHANNEL 6 - 200 MV/MM.

16. Repeat step B.5.

17. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

18. Repeat steps B.7 and B.8.

19. Repeat step B.5.

20. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

21. Repeat steps B.11 and B.12.

22. Set SHAFT SLEW CONTROL switch to INCR.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

24. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1000 MV/MM
CHANNEL 2 - 500 MV/MM

CHANNEL 3 - 1000 MV/MM
CHANNEL 4 - 50 MV/MM
CHANNEL 5 - 50 MV/MM
CHANNEL 6 - 1000 MV/MM.

25. Repeat step B.5.

26. Record time for the SXT shaft tachometer output to reach steady state, from Oscillograph Chart (CHANNEL 6).

27. Record time for the SCT shaft 1X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 4).

28. Record time for the SHAFT ANGLE CDU 16X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 5).

29. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

30. Record DVM voltage indication.

31. Repeat steps B.5, B.26, B.27 and B.28.

32. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

33. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 20 MV/MM
CHANNEL 2 - 1 MV/MM
CHANNEL 3 - 1 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

34. Set the FILTER switches on CHANNEL 4, CHANNEL 5, and CHANNEL 6 DEMOD's to LO.

35. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

36. Set CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 (SCT shaft tachometer).

37. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

40. Set the SHAFT SLEW CONTROL switch on either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the SHAFT ANGLE CDU stops moving. Determine value of SXT shaft tachometer signal from CHANNEL 6 of the Oscillograph Chart.

NOTE: Deflection of the Oscillograph to the right indicates an increasing signal.

41. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts above the value determined in step B.40.

JOB SHAFT SERVO LOOP TEST | JDC 10715 REV C PAGE 5 OF 5

SUBSYSTEM OPTICAL | ASSY

42. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

43. Set the SHAFT SLEW CONTROL switch to OFF.

44. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:

- a. SCT shaft tachometer (CHANNEL 1)
- b. SHAFT ANGLE CDU tachometer (CHANNEL 3)
- c. SXT shaft tachometer (CHANNEL 6).

45. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:

- a. SCT shaft tachometer (CHANNEL 1)
- b. SHAFT ANGLE CDU tachometer (CHANNEL 3)
- c. SXT shaft tachometer (CHANNEL 6)

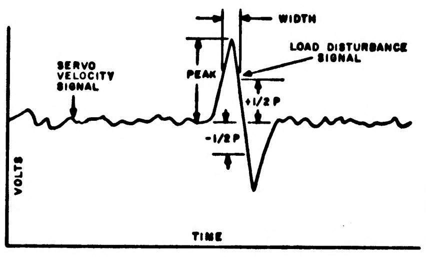

Figure 1

Tachometer Signals During Smoothness Test

46. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

47. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts below the value determined in step B.40.

48. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

49. Set the SHAFT SLEW CONTROL switch to OFF.

50. Repeat step B.44.

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the Remote Optics Controller is connected to cable W87 as shown in JDC 10734.

2. Assure that the following pushbuttons on the Test Control panel are lighted:

OIA ON
OPTICS POWER ON
BLOCK 1 SERIES 100.

NOTE: Assure that the Oscillograph Console and Digital Voltmeter (DVM) have been energized a minimum of 15 minutes immediately prior to use in this test.

3. Assure that the following pushbutton and indicators on the Remote Optics Controller are lighted:

ZERO OPTICS
CONTROLLER DIRECT
SCT DRIVE NORMAL
SXT DRIVE NORMAL

4. Assure that the following pushbuttons are not lighted:

TRACKER
TRACKER POWER.

5. Set switches as follows:

SHAFT SLEW CONTROL to OFF
TRUNNION SLEW CONTROL to OFF
SLAVE TELESCOPE to STAR LOS
COARSE GAIN CONTROL to MED.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

7. Connect the SXT Shaft MDA Input to the DVM by setting the Primary Signal Selector to 203.

8. Set switches on Oscillograph Signal Selector panel as follows:

a. CHANNEL 1 to 8 (SXT shaft MDA Output)

b. CHANNEL 2 to 13 (SXT shaft MDA input)

c. CHANNEL 3 to 13 (SHAFT ANGLE CDU tachometer)

d. CHANNEL 4 to 13 (SCT shaft 1X resolver error)

e. CHANNEL 5 to 10 (SHAFT ANGLE CDU 16X resolver error)

f. CHANNEL 6 to 10 (SXT shaft tachometer).

9. Assure that the following indicators are lighted:

800~ 0 PH REFERENCE
CH 3 AC
CH 4 AC
CH 5 AC
CH 6 AC.

10. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 100 MV/MM
CHANNEL 2 - 100 MV/MM
CHANNEL 3 - 100 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 100 MV/MM.

NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

11. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set SHAFT SLEW CONTROL switch to INCR.

4. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.606 volts. Record DVM voltage indication.

5. Perform following steps in sequence:

a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.

c. Approximately 10 seconds after performing step B.5.b, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

NOTE: The "steady state" signal is defined as the average value of that signal obtained after the initial transients die out. To find the average value of the signal, it may be necessary to take the average of approximately twenty equally spaced (in time) readings over approximately two seconds of the steady state signal.

6. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

7. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

8. Record DVM voltage indication.

9. Repeat step B.5.

10. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

11. Press the MANUAL/ZERO OPTICS and SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbuttons on the Remote Optics Controller to light the ZERO OPTICS and SXT DRIVE NORMAL indicators.

12. After the CDU's have zeroed, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED and MANUAL/ZERO OPTICS pushbuttons to light the SXT DRIVE DISABLED and MANUAL indicators.

13. Set switches as follows:

COARSE GAIN CONTROL to HI
SHAFT SLEW CONTROL to INCR.

14. Adjust the FINE GAIN CONTROL until DVM indicates approximately 1.82 volts. Record DVM voltage indication.

15. Set the following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 200 MV/MM
CHANNEL 2 - 200 MV/MM
CHANNEL 3 - 200 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 5 MV/MM
CHANNEL 6 - 200 MV/MM.

16. Repeat step B.5.

17. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

18. Repeat steps B.7 and B.8.

19. Repeat step B.5.

20. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

21. Repeat steps B.11 and B.12.

22. Set SHAFT SLEW CONTROL switch to INCR.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

24. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 1000 MV/MM
CHANNEL 2 - 500 MV/MM

CHANNEL 3 - 1000 MV/MM
CHANNEL 4 - 50 MV/MM
CHANNEL 5 - 50 MV/MM
CHANNEL 6 - 1000 MV/MM.

25. Repeat step B.5.

26. Record time for the SXT shaft tachometer output to reach steady state, from Oscillograph Chart (CHANNEL 6).

27. Record time for the SCT shaft 1X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 4).

28. Record time for the SHAFT ANGLE CDU 16X resolver error to reach (a) the first zero crossover, and (b) steady state, from Oscillograph Chart (CHANNEL 5).

29. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

30. Record DVM voltage indication.

31. Repeat steps B.5, B.26, B.27 and B.28.

32. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

33. Set following sensitivities on Oscillograph Amplifier panels:

CHANNEL 1 - 20 MV/MM
CHANNEL 2 - 1 MV/MM
CHANNEL 3 - 1 MV/MM
CHANNEL 4 - 1 MV/MM
CHANNEL 5 - 1 MV/MM
CHANNEL 6 - 1 MV/MM.

34. Set the FILTER switches on CHANNEL 4, CHANNEL 5, and CHANNEL 6 DEMOD's to LO.

35. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

36. Set CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 (SCT shaft tachometer).

37. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

38. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

39. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

40. Set the SHAFT SLEW CONTROL switch on either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the SHAFT ANGLE CDU stops moving. Determine value of SXT shaft tachometer signal from CHANNEL 6 of the Oscillograph Chart.

NOTE: Deflection of the Oscillograph to the right indicates an increasing signal.

41. Using the FINE GAIN CONTROL on the Remote Optics Controller, increase the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts above the value determined in step B.40.

42. Press CHART SPEEDS 20 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

43. Set the SHAFT SLEW CONTROL switch to OFF.

44. Record the maximum peak-to-peak variation in the Servo Velocity Signal (see Figure 1) of the following:

a. SCT shaft tachometer (CHANNEL 1)

b. SHAFT ANGLE CDU tachometer (CHANNEL 3)

c. SXT shaft tachometer (CHANNEL 6).

45. Record the signal width of the Load Disturbance Signal (see Figure 1) at approximately 1/2 positive peak and 1/2 negative peak of the following:

a. SCT shaft tachometer (CHANNEL 1)

b. SHAFT ANGLE CDU tachometer (CHANNEL 3)

c. SXT shaft tachometer (CHANNEL 6)

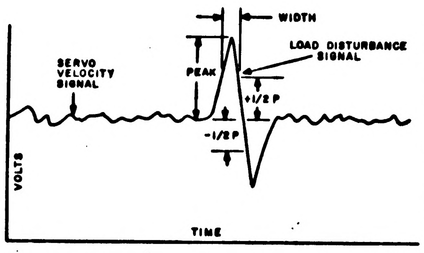

Figure 1

Tachometer Signals During Smoothness Test

46. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

47. Using the SHAFT SLEW CONTROL switch and the FINE GAIN CONTROL on the Remote Optics Controller, decrease the tachometer signal on CHANNEL 6 until its nominal value is 7 millivolts below the value determined in step B.40.

48. Press CHART SPEEDS 10 pushbutton on Oscillograph Control panel and allow chart to drive for approximately one minute. Set the CHART DRIVE switch to OFF.

49. Set the SHAFT SLEW CONTROL switch to OFF.

50. Repeat step B.44.

    SHAFT SLEW CONTROL to OFF
    TRUNNION SLEW CONTROL to OFF
    SLAVE TELESCOPE to STAR LOS
    COARSE GAIN CONTROL to MED.

6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to OFF.

7. Connect the SXT Shaft MDA Input to the DVM by setting the Primary Signal Selector to 203.

8. Press the MANUAL/ZERO OPTICS pushbutton to light the ZERO OPTICS indicator.

9. Set switches on Oscillograph Signal Selector panel as follows:

    a. CHANNEL 1 to 8 (SXT shaft MDA Output)
    b. CHANNEL 2 to 13 (SXT shaft MDA input)
    c. CHANNEL 3 to 13 (SHAFT ANGLE CDU tachometer)
    d. CHANNEL 4 to 13 (SCT shaft 1X resolver error)
    e. CHANNEL 5 to 10 (SHAFT ANGLE CDU 16X resolver error)
    f. CHANNEL 6 to 10 (SXT shaft tachometer).

10. Assure that the following indicators are lighted:

    800~0 PH REFERENCE
    CH 3 AC
    CH 4 AC
    CH 5 AC
    CH 6 AC.

11. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 100 MV/MM
    CHANNEL 2 - 100 MV/MM
    CHANNEL 3 - 100 MV/MM
    CHANNEL 4 - 1 MV/MM
    CHANNEL 5 - 1 MV/MM
    CHANNEL 6 - 100 MV/MM.

    NOTE: Oscillograph sensitivities given are nominal and may be adjusted at the discretion of the operator.

12. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to CM/HR.

B. PROCEDURE

1. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the MANUAL indicator.

2. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.

3. Set SHAFT SLEW CONTROL switch to INCR.

4. Adjust FINE GAIN CONTROL until DVM indicates approximately 0.606 volts. Record DVM voltage indication.

DATE ______

---

5. Perform following steps in sequence:

    a. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.
    b. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton on the Remote Optics Controller to light the SXT DRIVE NORMAL indicator.
    c. Approximately 10 seconds after performing step B.5.b, press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE DISABLED indicator.
    d. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR.

6. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

7. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

8. Record DVM voltage indication.

9. Repeat step B.5.

10. Record SHAFT ANGLE CDU 16X resolver error steady state signal from Oscillograph Chart (CHANNEL 5).

11. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

12. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

13. Set switches as follows:

    COARSE GAIN CONTROL to HI
    SHAFT SLEW CONTROL to INCR.

14. Adjust the FINE GAIN CONTROL until DVM indicates approximately 1.82 volts. Record DVM voltage indication.

15. Set the following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 200 MV/MM
    CHANNEL 2 - 200 MV/MM
    CHANNEL 3 - 200 MV/MM
    CHANNEL 4 - 1 MV/MM
    CHANNEL 5 - 5 MV/MM
    CHANNEL 6 - 200 MV/MM.

16. Repeat step B.5.

17. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

18. Repeat steps B.7 and B.8.

19. Repeat step B.5.

20. Record SCT Shaft 1X resolver error steady state signal from Oscillograph Chart (CHANNEL 4).

21. Repeat steps B.11 and B.12.

22. Set SHAFT SLEW CONTROL switch to INCR.

23. Adjust the FINE GAIN CONTROL until DVM indicates approximately 10.00 volts. Record DVM voltage indication.

DATE ______

---

24. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 1000 MV/MM
    CHANNEL 2 - 500 MV/MM
    CHANNEL 3 - 1000 MV/MM
    CHANNEL 4 - 10 MV/MM
    CHANNEL 5 - 10 MV/MM
    CHANNEL 6 - 1000 MV/MM.

25. Repeat step B.5.

26. Record time for the SXT shaft tachometer output to reach steady state, from Oscillograph Chart (CHANNEL 6).

27. Record time for the SCT shaft 1X resolver error to reach steady state, from Oscillograph Chart (CHANNEL 4).

28. Record time for the SHAFT ANGLE CDU 16X resolver error to reach steady state, from Oscillograph Chart (CHANNEL 5).

29. Set SHAFT SLEW CONTROL switch on the Remote Optics Controller to DECR.

30. Record DVM voltage indication.

31. Repeat steps B.5, B.26, B.27 and B.28.

32. Set the COARSE GAIN CONTROL switch on the Remote Optics Controller to LO and the FINE GAIN CONTROL fully counterclockwise.

33. Set following sensitivities on Oscillograph Amplifier panels:

    CHANNEL 1 - 20 MV/MM
    CHANNEL 2 - 1 MV/MM
    CHANNEL 3 - 1 MV/MM
    CHANNEL 4 - 1 MV/MM
    CHANNEL 5 - 1 MV/MM
    CHANNEL 6 - 1 MV/MM.

34. Set the FILTER switches on CHANNEL 4, CHANNEL 5, and CHANNEL 6 DEMOD's to LO.

35. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

36. Set CHANNEL 1 switch on the Oscillograph Signal Selector panel to 13 (SCT shaft tachometer).

37. Press the MANUAL/ZERO OPTICS pushbutton on the Remote Optics Controller to light the ZERO OPTICS indicator.

38. After the CDU's have zeroed, press the MANUAL/ZERO OPTICS pushbutton to light the MANUAL indicator.

39. Press the SXT DRIVE NORMAL/SXT DRIVE DISABLED pushbutton to light the SXT DRIVE NORMAL indicator.

40. Set the SHAFT SLEW CONTROL switch to either INCR or DECR as necessary, and adjust FINE GAIN CONTROL until the SHAFT ANGLE CDU stops moving. Determine value of SXT shaft tachometer signal from CHANNEL 6 of the Oscillograph chart.

    NOTE: Deflection of the Oscillograph to the right indicates an increasing signal.

41. Using the FINE GAIN CONTROL on the

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the G&N Indicator Control panel is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:
   OIA ON
   OPTICS POWER ON
   BLOCK I SERIES 100.

   NOTE: Assure that the Counter has been energized at least 15 minutes immediately prior to use in this test.
3. Set switches and selectors on G&N Indicator Control panel as follows:
   mode selector to ZERO OPTICS.
4. After CDU's have zeroed, set the OPTICS mode selector on the G&N Indicator Control panel to COMPUTER.
5. Set switches and controls on the Counter as follows to obtain a 10-second sampling time:
   FUNCTION to E/UT X N_1
   INPUT SELECTOR to A-B
   SENSE SELECTOR to FWD
   DISPLAY RESET to ZERO
   SAMPLE TIME (N_1) to 100000
   CLOCK FREQUENCY DIVIDER to 10
   CLOCK PULSE SELECTOR to INT
   DISPLAY TIME TO 10^5.

6. Set DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to CTR.

B. PROCEDURE

1. Connect the 2X TRUNNION CDU $+\Delta\theta$ and $-\Delta\theta$ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 16.
2. Apply 4 positive input pulses per burst to the Trunnion DAC by setting switches on the Apollo Computer Simulator panel as follows:
   burst control to STEADY BURST
   PULSES/BURST to 4
   POLARITY to +
   DRIVE SELECT to X OPT
3. Monitor the Counter to determine and record the 2X TRUNNION CDU encoder output pulses during the 10-second periods. Discount the first reading and record the second reading.
4. Apply 4 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch on the Apollo Computer Simulator panel to -.
5. Repeat step B.3 for the negative input pulses.
6. Apply 16 positive input pulses per burst to the Trunnion DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 16.
7. Repeat step B.3 for the 16 positive input pulses per burst.
8. Apply 16 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch to -.
9. Repeat step B.3 for the 16 negative input pulses per burst.
10. Apply 64 positive input pulses per burst to the Trunnion DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 64.
11. Repeat step B.3 for the 64 positive input pulses per burst.
12. Apply 64 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch to -.
13. Repeat step B.3 for the 64 negative input pulses per burst.
14. Apply 256 positive input pulses per burst to the Trunnion DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 256.
15. Repeat step B.3 for the 256 positive input pulses per burst.

16. Apply 256 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch to -.
17. Repeat step B.3 for the 256 negative input pulses per burst.
18. Connect the SHAFT ANGLE CDU $+\Delta\theta$ and $-\Delta\theta$ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 17.
19. Apply 4 positive input pulses per burst to the Shaft DAC by setting switches on the Apollo Computer Simulator panel as follows:
    PULSES/BURST switch to 4
    POLARITY switch to +
    DRIVE SELECT switch to Y OPT
20. Monitor the Counter to determine and record the SHAFT ANGLE CDU encoder output pulses during the 10-second periods. Discount the first reading and record the second reading.
21. Apply 4 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch on the Apollo Computer Simulator panel to -.
22. Repeat step B.20 for the negative input pulses.
23. Apply 16 positive input pulses per burst to the Shaft DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 16.
24. Repeat step B.20 for the 16 positive input pulses per burst.
25. Apply 16 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch to -.
26. Repeat step B.20 for the 16 negative input pulses per burst.
27. Apply 64 positive input pulses per burst to the Shaft DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 64.
28. Repeat step B.20 for the 64 positive input pulses per burst.
29. Apply 64 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch to -.
30. Repeat step B.20 for the 64 negative input pulse per burst.
31. Apply 256 positive input pulses per burst to the Shaft DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 256.
32. Repeat step B.20 for the 256 positive input pulses per burst.
33. Apply 256 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch to -.
34. Repeat step B.20 for the 256 negative input pulses per burst.

JOB DAC SENSITIVITY TEST

JDC 10716 REV. ____ PAGE 1 OF 3

INITIAL TDRR 19950 D.S. PGS 3

SUBSYSTEM OPTICAL

ASSY.

DESCRIPTION DAC Sensitivity is tested by pulsing the DAC and monitoring encoder output pulses.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES ATP 1009502, Paragraph 3-3.17.1 JDC 10734

IMPORTANT JDC 10702 shall have been performed.

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the G&N Indicator Control panel is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:
   - OIA ON/ISS POWER DISABLED
   - OPTICS POWER ON
   - BLOCK I SERIES 100.

   NOTE: Assure that the Counter has been energized at least 15 minutes immediately prior to use in this test.
3. Set switches and selectors on G&N Indicator Control panel as follows:
   mode selector to ZERO OPTICS.
4. After CDU's have zeroed, set the OPTICS mode selector on the G&N Indicator Control panel to COMPUTER.
5. Set switches and controls on the Counter as follows to obtain a 10-second sampling time:
   - FUNCTION to E/UT X N_1
   - INPUT SELECTOR to A-B
   - SENSE SELECTOR to FWD
   - DISPLAY RESET to ZERO
   - SAMPLE TIME (N_1) to 100000
   - CLOCK FREQUENCY DIVIDER to 10
   - CLOCK PULSE SELECTOR to INT
   - DISPLAY TIME TO 10^5.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

JOB DAC SENSITIVITY TEST

ASSY

6. Set DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to CTR.

B. PROCEDURE

1. Connect the 2X TRUNNION CDU +Δθ and -Δθ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 16.
2. Apply one positive input pulse per burst to the Trunnion DAC by setting switches on the Apollo Computer Simulator panel as follows:
   - burst control to STEADY BURST
   - PULSES/BURST to 1
   - POLARITY to +
   - DRIVE SELECT to X OPT
3. Monitor the Counter to determine and record the 2X TRUNNION CDU encoder output pulses during the 10-second periods. Discount the first reading and record the second reading.
4. Apply one negative input pulse per burst to the Trunnion DAC by setting the POLARITY switch on the Apollo Computer Simulator panel to -.
5. Repeat step B.3 for the negative input pulses.
6. Apply 16 positive input pulses per burst to the Trunnion DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 16.
7. Repeat step B.3 for the 16 positive input pulses per burst.
8. Apply 16 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch to -.
9. Repeat step B.3 for the 16 negative input pulses per burst.
10. Apply 64 positive input pulses per burst to the Trunnion DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 64.
11. Repeat step B.3 for the 64 positive input pulses per burst.
12. Apply 64 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch to -.
13. Repeat step B.3 for the 64 negative input pulses per burst.
14. Apply 256 positive input pulses per burst to the Trunnion DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 256.
15. Repeat step B.3 for the 256 positive input pulses per burst.

DATE ________

16. Apply 256 negative input pulses per burst to the Trunnion DAC by setting the POLARITY switch to -.
17. Repeat step B.3 for the 256 negative input pulses per burst.
18. Connect the SHAFT ANGLE CDU +Δθ and -Δθ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 17.
19. Apply one positive input pulse per burst to the Shaft DAC by setting switches on the Apollo Computer Simulator panel as follows:
   - PULSES/BURST switch to 1
   - POLARITY switch to +
   - DRIVE SELECT switch to Y OPT
20. Monitor the Counter to determine and record the SHAFT ANGLE CDU encoder output pulses during the 10-second periods. Discount the first reading and record the second reading.
21. Apply one negative input pulse per burst to the Shaft DAC by setting the POLARITY switch on the Apollo Computer Simulator panel to -.
22. Repeat step B.20 for the negative input pulses.
23. Apply 16 positive input pulses per burst to the Shaft DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 16.
24. Repeat step B.20 for the 16 positive input pulses per burst.
25. Apply 16 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch to -.
26. Repeat step B.20 for the 16 negative input pulses per burst.
27. Apply 64 positive input pulses per burst to the Shaft DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 64.
28. Repeat step B.20 for the 64 positive input pulses per burst.
29. Apply 64 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch to -.
30. Repeat step B.20 for the 64 negative input pulse per burst.
31. Apply 256 positive input pulses per burst to the Shaft DAC by setting the POLARITY switch to + and the PULSES/BURST switch to 256.
32. Repeat step B.20 for the 256 positive input pulses per burst.
33. Apply 256 negative input pulses per burst to the Shaft DAC by setting the POLARITY switch to -.
34. Repeat step B.20 for the 256 negative input pulses per burst.

TOOLS AND MATERIAL

A. PREPARATION

1. Assure that the G & N Indicator Control panel is connected to cable W87 as shown in JDC 10734.
2. Assure that the following pushbuttons on the Test Control panel are lighted:
   OIA ON
   OPTICS POWER ON
   BLOCK I SERIES 100.

   NOTE: Assure that the Counter has been energized at least 15 minutes immediately prior to use in this test.
3. Set switches and selectors on G & N Indicator Control panel as follows:
   mode selector to ZERO OPTICS.
4. After CDU's have zeroed, set the Optics mode selector on G & N Indicator Control panel to COMPUTER.
5. Set the Counter to count for 19.7754 seconds by setting switches and controls as follows:
   FUNCTION to E/UT X N_1
   SAMPLE TIME (N_1) to 197754
   INPUT SELECTOR to A-B
   CLOCK FREQUENCY DIVIDER to 10
   SENSE SELECTOR to FWD
   DISPLAY RESET to ZERO
   DISPLAY TIME (N_2) to 10^5.
6. Set the DIGITAL RECORDER SELECTOR switch on the Primary Signal Selector panel to CTR.

B. PROCEDURE

1. Connect the 2X TRUNNION CDU $+\Delta\theta$ and $-\Delta\theta$ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 16.
2. Press RESET pushbutton on Counter.

   NOTE: The Counter readout is equal to the CDU drift rate in $\widehat{sec}$/sec as shown by the following equation:

$$\text{CDU drift rate} = \frac{\text{pulses} \times 19.7754\ \widehat{sec}/\text{pulse}}{19.7754\ \text{sec}}$$

3. Monitor the Counter to determine and record the CDU drift rate.
4. Connect the SHAFT ANGLE CDU $+\Delta\theta$ and $-\Delta\theta$ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 17.
5. Set the counter to count for 39.5508 seconds by setting SAMPLE TIME (N1) to 395508.
6. Repeat steps B.2 and B.3 for the SHAFT ANGLE CDU.

   NOTE: The Counter readout is equal to the CDU drift rate in $\widehat{sec}$/sec as shown by the following equation:

$$\text{CDU drift rate} = \frac{\text{pulses} \times 39.5508\ \widehat{sec}/\text{pulse}}{39.5508\ \text{sec}}$$

ASSY

B. PROCEDURE

1. Connect the 2X TRUNNION CDU $+\Delta\theta$ and $-\Delta\theta$ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 16.
2. Press RESET pushbutton on Counter.

   NOTE: The Counter readout is equal to the CDU drift rate in $\widehat{\text{sec}}$/sec as shown by the following equation:

$$\text{CDU drift rate} = \frac{\text{pulses x } 19.7754\ \widehat{\text{sec}}/\text{pulse}}{19.7754\ \text{sec}}$$

3. Monitor the Counter to determine and record the CDU drift rate.
4. Connect the SHAFT ANGLE CDU $+\Delta\theta$ and $-\Delta\theta$ signals to the Counter by setting the COUNTER INPUT "A" OR "AB" switch on the Primary Signal Selector panel to 17.
5. Set the counter to count for 39.5508 seconds by setting SAMPLE TIME (N1) to 395508.
6. Repeat steps B.2 and B.3 for the SHAFT ANGLE CDU.

   NOTE: The Counter readout is equal to the CDU drift rate in $\widehat{\text{sec}}$/sec as shown by the following equation:

$$\text{CDU drift rate} = \frac{\text{pulses x } 39.5508\ \widehat{\text{sec}}/\text{pulse}}{39.5508\ \text{sec}}$$

TOOLS AND MATERIAL

NOTE: To lift the Shaft Accuracy Tester (SAT) Rotary Table and Mirror Assembly, attach the hoist to the three eyebolts on the jig plate assembly. Assure that the hoist chains do not strain against the SAT Rotary Table.

1. Install the SAT Rotary Table and Mirror Assembly on the SAT Base Assembly by mounting the three leveling pad retainers to the SAT Base Assembly with the 12 screws and lockwashers provided.

2. Adjust the height of the Turntable Base to 17 7/8 (±1/8) inches below the surface of the Rotary Table as shown in figure 1, using the threaded studs on the jig plate assembly.

3. Connect the transducer of the Electronic Level (Talyvel) to the meter. Set the meter selector switch to the "8" (minutes scale) position.

4. Depress the BATTERY VOLTS button inside the access door at the rear of the Talyvel meter. The meter dial shall deflect past the red battery test mark. If not, replace the batteries.

NOTE: Select one of the three jig plate assembly leveling pads as a reference pad and consider as pad No. 1. Consider the remaining two leveling pads as pads No. 2 and 3 numbered in a counterclockwise sequence as shown in figure 2. Consider the Talyvel transducer micrometer adjust knob nearest to the Talyvel meter interconnect cord as the left knob. Consider deflection of the Talyvel meter dial to the right of the zero position as positive.

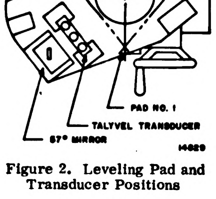

Figure 2. Leveling Pad and Transducer Positions

5. Position the SAT Rotary Table such that the surface of the 57° mirror is approximately parallel to a line between leveling pads No. 1 and 3. Note the SAT Rotary Table setting.

6. Place the Talyvel transducer on the two machined surfaces on the Turntable Base directly in front of the 57° mirror (see figure 2) with the transducer axis parallel to a line between leveling pads No. 1 and 3 oriented with the left micrometer knob nearest to pad No. 1.

7. Set both micrometer adjust knobs on the transducer to zero by aligning the zero indications on the drums to the centers of the top horizontal scribe marks on the shafts.

NOTE: Clockwise adjustment of the right micrometer knob on the transducer will cause positive deflection of the meter pointer; clockwise adjustment of the left knob will cause negative deflection of the meter pointer.

8. Set the Talyvel meter to zero by clockwise adjustment of the right or left micrometer knob, as required. Note the indications of both micrometers.

DATE 11 JUN 65

JOB INSTALLATION OF SHAFT ACCURACY TESTER ROTARY TABLE

JDC 10733 **REV** A **PAGE** 4 **OF** 5

SUBSYSTEM OPTICAL

ASSY

NOTE: To determine Talyvel meter indications in steps 9 and 11 when the pointer is off-scale in the 8 arc minute range, adjust the required micrometer knob in the clockwise direction until the meter indication is zero. The meter indication in micrometer units is the difference between initial and final indications of the adjusted micrometer (positive if the pointer was off-scale to the right, negative if off-scale to the left).

9. Drive the SAT Rotary Table through 120 degrees in the increasing direction. Monitor and note the Talyvel meter indication as R_1, using the most sensitive scale possible.

10. If one of the micrometer adjustment knobs was adjusted in step 9, reset the micrometer to the value noted in step 8.

11. Drive the SAT Rotary Table through 120 degrees in the increasing direction. Monitor and note the Talyvel meter indication as R_2, using the most sensitive scale possible.

NOTE: If one of the measured meter indications (R_1 or R_2) is in micrometer units and the second is in arc minutes or arc seconds, treat the second indication as zero in step 12.

12. Calculate and note leveling pad corrections as follows:

$$\beta_3 = \frac{R_1 + R_2}{3}$$

$$\beta_2 = \frac{R_2 - 2R_1}{3}$$

If both β_2 and β_3 are equal to or less than 5 arc seconds, proceed to step 22.

13. Set both micrometer indications to zero.

14. Adjust the right or left micrometer knob, as required, to set the meter indication to zero. Note both micrometer indications.

15. Adjust the right or left micrometer knob, as required, to set the meter indication to β_3. If β_3 is in micrometer units, adjust the required micrometer knob through β_3 micrometer units.

NOTE: Raise leveling pad No. 3 in step 16 if β_3 is negative.

16. Adjust leveling pad No. 3 until the meter indication is zero.

17. Repeat steps 13 and 14.

18. Adjust the right or left micrometer knob, as required, to set the meter indication to β_2. If β_2 is in micrometer units, adjust the required micrometer knob through β_2 micrometer units.

DATE 11 JUN 65

SUBSYSTEM OPTICAL | ASSY

NOTE: Raise leveling pad No. 2 in step 19 if β_2 is positive.

19. Adjust leveling pad No. 2 until the meter indication is zero.
20. Drive the SAT Rotary Table through 120 degrees in the increasing direction to the position noted in step 5.
21. Repeat steps 7 through 21.
22. Record R_1, R_2, β_2 and β_3.
23. Set the Talyvel meter selector switch to OFF, tighten the two micrometer adjustment knobs fully clockwise, and store the Talyvel.

TOOLS AND MATERIAL Mercury pool

A. PREPARATION

1. Assure that the Alignment Certification Fixture is resting on a suitably stable surface.
2. Inspect the Alignment Certification Fixture mounting pads and azimuth alignment pins to insure that they are not damaged and are free of dirt. Carefully wipe pads and pins with lint free lens paper or a camel's hair brush.
3. Connect the transducer of the Electronic Level (Talyvel) to the meter. Set the meter selector switch to the "8" (minutes scale) position and depress the BATTERY VOLTS button inside the rear access door of the Talyvel meter. The meter dial shall deflect past the red battery test mark. If not, replace the batteries.
4. Place the transducer on the machined pads between the two azimuth alignment pins on the Alignment Certification Fixture (Talyvel position No. 1 shown in figure 1).
5. Set both micrometer adjust knobs on the transducer to zero by aligning the zero indications on the drums to the centers of the top horizontal scribe marks on the shafts.
6. Adjust one of the two micrometer adjustment knobs on the transducer, as required, in the clockwise direction to set the meter indication to zero. Note both micrometer settings.
7. Rotate the transducer 180 degrees.

NOTE: If the meter pointer is off-scale on the 8 arc

VERIFICATION WITH SIDL REQUIRED BEFORE USE **DATE** ______

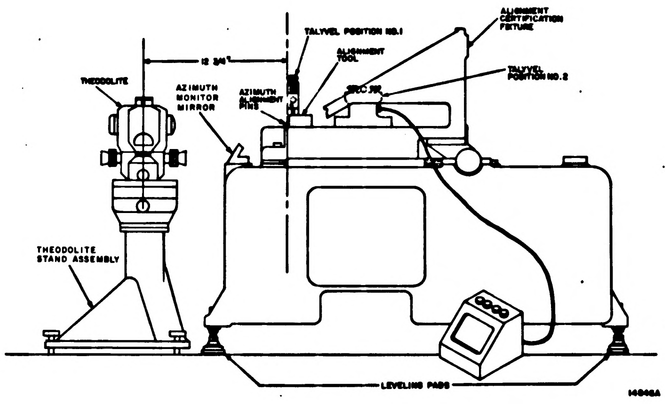

Figure 1. Alignment Equipment Location

DATE ______

---

minute scale in steps A.8 or A.13, adjust the required micrometer knob in the clockwise direction until the meter indication is zero. Note the difference between the initial and final indications of the adjusted micrometer.

8. Monitor and note the meter indication using the most sensitive scale possible. If the meter indication is within ±2 arc seconds of zero, proceed to step A.11; if not, adjust one of the two micrometer knobs, as required, to set the meter indication to one-half of the value noted.
9. Adjust one of the two front leveling pads on the Alignment Certification Fixture to set the meter indication to zero.
10. Rotate the transducer 180 degrees and repeat steps A.5 through A.10.
11. Place the transducer on the machined pads oriented 90 degrees from a line between the two azimuth alignment pins on the Alignment Certification Fixture (Talyvel position No. 2 shown in figure 1).
12. Repeat steps A.5 through A.7.
13. Monitor and note the meter indication using the most sensitive scale possible. If the meter indication is within ±2 arc seconds of zero, proceed to step A.16; if not, adjust one of the two micrometer knobs, as required, to set the meter indication to one-half of the value noted.
14. Adjust the single rear leveling pad on the Alignment Certification Fixture to set the meter indication to zero.
15. Rotate the transducer 180 degrees and repeat steps A.12 through A.15.
16. Remove the Talyvel transducer and meter.
17. Attach the theodolite to the Theodolite Base Assembly and position the base assembly as shown in figure 1 such that the vertical axis of the theodolite is approximately 12-3/4 inches from the Alignment Certification Fixture azimuth alignment pins and 1-1/2 inches to the left of the right alignment pin as viewed from the end of the Alignment Certification Fixture closest to the alignment pins.
18. Energize the theodolite reticle and adjust the objective focus to infinity (adjustment knob fully clockwise).

NOTE: The theodolite reticle shall have been energized for at least 15 minutes prior to performing step A.21.

19. Level the theodolite base to the plate spirit level and the theodolite telescope to the altitude level.
20. Carefully place the Alignment Tool on the Alignment Certification Fixture with the reference surface against the azimuth alignment pins as shown in figure 1.
21. Sight through the theodolite eyepiece and adjust the theodolite in azimuth and elevation

DATE ______

---

as required until the image reflected from the Alignment Tool is visible.

22. Clamp the theodolite coarse azimuth and elevation controls
23. Sight through the theodolite eyepiece and adjust the theodolite in azimuth and elevation using the fine positioning controls, as required, until the theodolite reticle is aligned to the reflected image.
24. Read the azimuth indication of the theodolite five times, offsetting the theodolite in azimuth and realigning the reticle to its reflected image before each reading. Record the average of the five readings.
25. Loosen the theodolite coarse elevation control, sight through the theodolite eyepiece, and depress the theodolite telescope until the image reflected from the Azimuth Monitor Mirror is visible.
26. Clamp the theodolite coarse elevation control.
27. Repeat steps A.23 and A.24.
28. Remove the Alignment Tool.
29. Inspect the Alignment Mirror Assembly (AMA) mounting pads to insure that they are not damaged and are free of dirt. Carefully wipe pads with lint free lens paper or a camel's hair brush.

NOTE: Extreme care must be exercised in step A.30 to prevent damage to mounting pads and alignment pins or disturbance of Alignment Certification Fixture position.

30. Loosen the two positioning clamp screws on the AMA (see figure 2) sufficiently to allow assembly to pass over the azimuth alignment pins on the Alignment Certification Fixture. Position the AMA carefully on the Alignment Certification Fixture with the position adjusting blocks against the azimuth alignment pins.
31. Tighten the two positioning clamp screws snug to hold the adjusting blocks firmly against the azimuth alignment pins on the Alignment Certification Fixture..
32. Tighten the 4 captive screws on the Alignment Mirror Assembly to the Alignment Certification Fixture to finger tightness.
33. Tighten the two positioning clamp screws to a torque of 9 (±0.5) pound-inches as shown in figure 2. Tighten the 45° positioning clamp first.
34. In increments of approximately 20 pound-inches and using a uniform torquing pattern (1, 3, 2, 4) as shown in figure 2, tighten the 4 captive screws on the Alignment Mirror Assembly to the Alignment Certification Fixture to a torque of 100 (±5) pound-inches.
35. Repeat steps A.23 and A.24.
36. Subtract the average of the five readings recorded in step A.35 (A.24) from the average of the five readings recorded in step A.27 (A.24) and record. If magnitude of the recorded value is

DATE ______

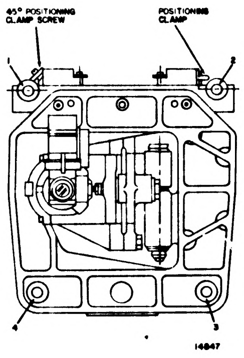

Figure 2. Mounting and Torquing Sequence

greater than 10 seconds, remove the AMA from the Alignment Certification Fixture and repeat steps A.19 through A.36. If the magnitude of recorded value is less than or equal to 10 seconds proceed to step A.37.

37. Subtract the value recorded in step A.36 from the value recorded in step A.24 and record.

38. Adjust the theodolite azimuth fine positioning control until the theodolite azimuth indicator indicates the value recorded in step A.37.

39. Loosen the theodolite coarse elevation control and depress the theodolite telescope to approximately 33 degrees from horizontal. Clamp the elevation axis.

40. Set the pellicle detent on the AMA to the 28.5° position.

41. Position the Light Housing of the AMA autocollimator parallel to a line between the two azimuth alignment pins such that the Light Housing points to the right as viewed from the end of the Certification Fixture closest to the alignment pins.

B. PROCEDURE

> NOTE: To determine AMA autocollimator micrometer indications in steps B.1, B.4 and B.6, take the average of a set of five readings, offsetting the micrometer drum before each reading. Always approach the final setting through clockwise rotation of the micrometer drum.

1. Sight through the AMA autocollimator and adjust the micrometer drum so that the adjustable filar reticle is aligned to the projected reticle of the theodolite. Adjust the theodolite in elevation if required (assuming that the azimuth indication does not change

DATE ________

---

from the value recorded in step A.37). Record the AMA autocollimator micrometer indication as ZR_z.

2. Turn off the theodolite reticle.

3. Energize the AMA autocollimator reticle and place the mercury pool directly under the autocollimator line of sight. Wait at least 15 minutes before performing step B.4.

4. Sight through the AMA autocollimator and adjust the micrometer drum so that the adjustable filar reticle is centered on the return image of the fixed reticle. Record the autocollimator micrometer indication as ZR_x.

5. Position the Light Housing of the AMA autocollimator perpendicular to and pointing toward a line between the two azimuth alignment pins.

6. Sight through the AMA autocollimator and adjust the micrometer drum so that the adjustable filar reticle is centered on the return image of the fixed reticle. Record the autocollimator micrometer indication as ZR_y.

7. Remove and store the theodolite, Theodolite Base Assembly, Talyvel, Alignment Tool and mercury pool.

The meter dial shall deflect past the red battery test mark. If not, replace the batteries.
4. Place the transducer on the machined pads between the two azimuth alignment pins on the Alignment Certification Fixture (Talyvel position No. 1 shown in figure 1).
5. Set both micrometer adjust knobs on the transducer to zero by aligning the zero indications on the drums to the centers of the top horizontal scribe marks on the shafts.
6. Adjust one of the two micrometer adjustment knobs on the transducer, as required, in the clockwise direction to set the meter indication to zero. Note both micrometer settings.
7. Rotate the transducer 180 degrees.

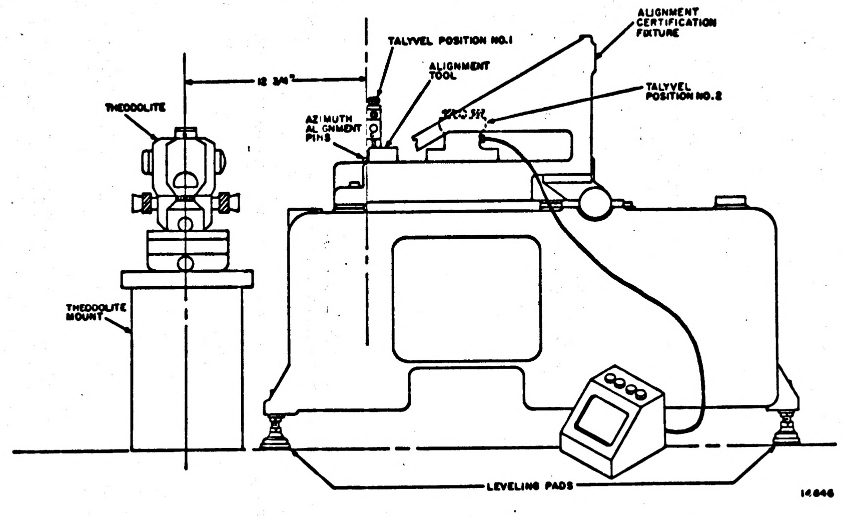

Figure 1. Alignment Equipment Location

NOTE: If the meter pointer is off-scale on the 8 arc minute scale in steps A.8 or A.13, adjust the required micrometer knob in the clockwise direction until the meter indication is zero. Note the difference between the initial and final indications of the adjusted micrometer.

8. Monitor and note the meter indication using the most sensitive scale possible. If the meter indication is within ±2 arc seconds of zero, proceed to step A.11; if not, adjust one of the two micrometer knobs, as required, to set the meter indication to one-half of the value noted.
9. Adjust one of the two front leveling pads on the Alignment Certification Fixture to set the meter indication to zero.
10. Rotate the transducer 180 degrees and repeat steps A.5 through A.10.
11. Place the transducer on the machined pads oriented 90 degrees from a line between the two azimuth alignment pins on the Alignment Certification Fixture (Talyvel position No. 2 shown in figure 1).
12. Repeat steps A.5 through A.7.
13. Monitor and note the meter indication using the most sensitive scale possible. If the meter indication is within ±2 arc seconds of zero, proceed to step A.15; if not, adjust one of the two micrometer knobs, as required, to set the meter indication to one-half of the value noted.
14. Adjust the single rear leveling pad on the Alignment Certification Fixture to set the meter indication to zero.
15. Remove the Talyvel transducer and meter.
16. Attach the theodolite to the Theodolite Base Assembly and position the base assembly as shown in figure 1 such that the vertical axis of the theodolite is approximately 12-3/4 inches from the Alignment Certification Fixture azimuth alignment pins and 1-1/2 inches to the left of the right alignment pin as viewed from the end of the Alignment Certification Fixture closest to the alignment pins.
17. Energize the theodolite reticle and adjust the objective focus to infinity (adjustment knob fully clockwise).

NOTE: The theodolite reticle shall have been energized for at least 15 minutes prior to performing step A.20.

18. Level the theodolite base to the plate spirit level and the theodolite telescope to the altitude level.
19. Carefully place the Alignment Tool on the Alignment Certification Fixture with the reference surface against the azimuth alignment pins as shown in figure 1.

20. Sight through the theodolite eyepiece and adjust the theodolite in azimuth and elevation, as required, until the theodolite reticle is aligned to the image reflected from the Alignment Tool. Record the horizontal scale reading of the theodolite.
21. Clamp the azimuth axis of the theodolite, assuring that the horizontal scale reading does not change.
22. Remove the Alignment Tool.
23. Depress the theodolite telescope through approximately 33 degrees as indicated by the vertical scale. Clamp the elevation axis.
24. Inspect the Alignment Mirror Assembly (AMA) mounting pads to insure that they are not damaged and are free of dirt. Carefully wipe pads with lint free lens paper or a camel's hair brush.

NOTE: Extreme care must be exercized in step A.25 to prevent damage to mounting pads and alignment pins or disturbance of Alignment Certification Fixture position.

25. Loosen the two positioning clamp screws on the AMA (see figure 2) sufficiently to allow assembly to pass over the azimuth alignment pins on the Alignment Certification Fixture. Position the AMA carefully on the Alignment Certification Fixture with the position adjusting blocks against the azimuth alignment pins.
26. Tighten the two positioning clamp screws snug to hold the adjusting blocks firmly against the azimuth alignment pins on the Alignment Certification Fixture.
27. Tighten the 4 captive screws on the Alignment Mirror Assembly to the Alignment Certification Fixture to finger tightness.
28. Tighten the two positioning clamp screws to a torque of 9 (±0.5) pound-inches as shown in figure 2. Tighten the 45° positioning clamp first.
29. In increments of approximately 20 pound-inches and using a uniform torquing pattern (1, 3, 2, 4) as shown in figure 2, tighten the 4 captive screws on the Alignment Mirror Assembly to the Alignment Certification Fixture to a torque of 100 (±5) pound-inches.

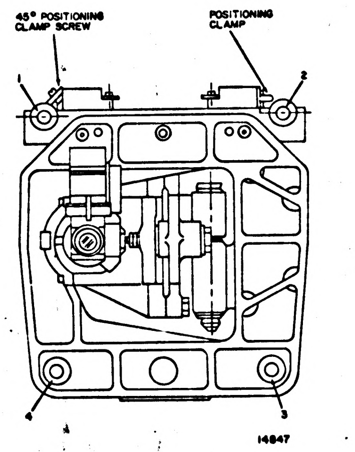

Figure 2. Mounting and Torquing Sequence

JOB CALIBRATION OF ALIGNMENT MIRROR ASSEMBLY

JDC 10739 REV PAGE 5 OF 5

SUBSYSTEM OPTICAL

ASSY

30. Set the pellicle detent on the AMA to the 28.5° position.

31. Position the Light Housing of the AMA autocollimator parallel to a line between the two azimuth alignment pins such that the Light Housing points to the right as viewed from the end of the Certification Fixture closest to the alignment pins.

B. PROCEDURE

> NOTE: To determine AMA autocollimator micrometer indications in steps B.1, B.4 and B.6, take the average of a set of five readings, offsetting the micrometer drum before each reading. Always approach the final setting through clockwise rotation of the micrometer drum.

1. Sight through the AMA autocollimator and adjust the micrometer drum so that the adjustable filar reticle is aligned to the projected reticle of the theodolite. Adjust the theodolite in elevation if required (assuring that the horizontal scale indication does not change from the value recorded in step A.20). Record the AMA autocollimator micrometer indication as ZR_z.

2. Turn off the theodolite reticle.

3. Energize the AMA autocollimator reticle and place the mercury pool directly under the autocollimator line of sight. Wait at least 15 minutes before performing step B.4.

4. Sight through the AMA autocollimator and adjust the micrometer drum so that the adjustable filar reticle is centered on the return image of the fixed reticle. Record the autocollimator micrometer indication as ZR_x.

5. Position the Light Housing of the AMA autocollimator perpendicular to and pointing toward a line between the two azimuth alignment pins.

6. Sight through the AMA autocollimator and adjust the micrometer drum so that the adjustable filar reticle is centered on the return image of the fixed reticle. Record the autocollimator micrometer indication as ZR_y.

7. Remove and store the theodolite, Theodolite Base Assembly, Talyvel, Alignment Tool and mercury pool.

TOOLS AND MATERIAL:

A. PREPARATION

1. Place assembly in vibration fixture to vibrate along the radial axis of the encapsulated components as shown in the figure.

2. Connect pins 21 to 8, 1 to 24, 13 to 16, 9 to 12, 23 to 22, and 11 to 14.

3. The test conditions and recommended test setup shall be as specified in Specification FTM1007522.

4. Apply a 3.00±0.03V rms 800 cps signal between pins 1 (Hi) and 22 (Lo) and between 9 (Hi) and 14 (Lo).

ASSY:

B. PROCEDURE

1. Monitor the output voltage between the following pins with electrical measuring equipment capable of measuring out-of-tolerance conditions which exist for a period of 1 msec.

18 (Hi) and 10 (Lo)
19 (Hi) and 10 (Lo)
17 (Hi) and 2 (Lo)
5 (Hi) and 2 (Lo)
15 (Hi) and 2 (Lo)
20 (Hi) and 10 (Lo)

2. Vibrate the assembly with simple harmonic motion swept from 10 to 1000 cps at a rate of one octave per 15 seconds. The magnitude of vibration shall be 6.0g rms limited to a 0.4 inch pp constant displacement from 10 cps to the crossover frequency.

C. RECORD

Use Data Sheet 11043 to record:

1. The output voltage deviations during vibration that are ≥ 10 percent.

2. Discrepancies in assembly workmanship evident after vibration.

ASSY:

3. Adjust the 800 cps test signal to obtain a 5V rms output between pins A9P1-S2 and A9P1-T2.
4. Measure the 800 cps test signal voltage at pins A9P1-B8 and A9P1-B7.
5. Calculate the difference between the voltages recorded in B.2.b and B.4.
6. Adjust the 800 cps test signal for 0.10V rms between pins A9P1-B8 and A9P1-B7.
7. Measure the output between the pins specified in Table II.

TABLE II

TEST PINS

STEP	HIGH	LOW
a	A9P1-M3	A9P1-L3
b	A9J1-18	A9J1-19

8. Disconnect pin A9P1-A9 from pin A9P1-B9.
9. Apply an 800 cps, modulated test signal source between pins A9P1-A9 and A9P1-B9.
10. Adjust the 800 cps test signal from pins A9P1-B8 and A9P1-B7 to obtain a null at pins A9P1-S2 and A9P1-T2 with the modulated test signal set at zero volts.
11. Adjust the 800 cps, modulated test signal to obtain a 35V pp output between pins A9P1-S2 and A9P1-T2.
12. Measure the signal between pins A9P1-A9 and A9P1-B9.
13. Remove the 800 cps test signal from pins A9P1-B8 and A9P1-B7.
14. Connect pins A9P1-B8 and A9P1-B7.
15. Remove the 800 cps modulated test signal from pins A9P1-A9 and A9P1-B9.
16. Apply a 0.10V, 800 cps test signal between pins A9P1-A9 and A9P1-B9.
17. Measure the output between the pins specified in Table III.

TABLE III

TEST PINS

STEP	HIGH	LOW
a	A9P1-M4	A9P1-L4
b.	A9J1-2	A9J1-1

18. Remove the 800 cps test signal from pins A9P1-A9 and A9P1-B9.
19. Connect pins A9P1-A9 and A9P1-B9.
20. Disconnect pin A9P1-C8 from pin A9P1-C9.
21. Apply an 800 cps, test signal between pins A9P1-C8 and A9P1-C9.
22. Adjust the test signal to 9V rms, between pins A9P1-C8 and A9P1-C9.
23. Measure the output from between pins A9P1-S2 and A9P1-T2.

Return all connections to original conditions upon conclusion of this test.

INTERVAL:

TOOLS AND MATERIAL:

A. PREPARATION

1. Apply 27.5±0.1 vdc between pins A10P1-T5 and A10P1-P4.
2. Disconnect pin A9P1-B8 from pin A9P1-B7.
3. Apply an 800 cps, test signal between pins A9P1-B8 and A9P1-B7.

B. PROCEDURE

1. Adjust the 800 cps signal to obtain a 12V rms output between pins A9P1-S2 and A9P1-T2.

   NOTE: Adjust the test signal amplitude and phase (π or 0), so that the voltage from pin A9P1-S2 to pin A9P1-T2 can be nulled if there is an output with no signal applied. Increase the test signal so that the voltage from pin A9P1-S2 to pin A9P1-T2 passes through the null, reverses phase and is increased to 12V rms.

2. Measure the signal between the pins specified in Table I.

1. Adjust the 800 cps signal to obtain a 12V rms output between pins A9P1-S1 and A9P1-T1.

   NOTE: Adjust the test signal amplitude and phase (0 or π) such that the voltage between pins A9P1-S1 and A9P1-T1 is nulled if there is an output signal with no input signal applied. Increase the test (input) signal so that the voltage between pins A9P1-S1 and A9P1-T1 passes through the null, reverses phase and increases to 12V rms.

2. Measure the signal between the pins specified in Table I.

12. Adjust the 800 cps test signal to obtain a 12V rms output between pins A8P1-S5 and A8P1-T5.

    NOTE: Adjust the test signal amplitude and phase (0 or π) such that the voltage between pins A8P1-S5 and A8P1-T5 is nulled if there is an output signal with no input signal applied. Increase the test (input) signal so that the voltage between pins A8P1-S5 and A8P1-T5 passes through the null, reverses phase and increases to 12V rms.

13. Measure the signal between the pins specified in Table III.

41. Disconnect pin A8P1-A9 from pin A8P1-B9.
42. Connect an 800 cps modulated test signal source between pins A8P1-A9 and A8P1-B9.
43. Adjust the 800 cps test signal from pins A8P1-C2 and A8P1-C1 to obtain a null at pins A8P1-S6 and A8P1-T6 with the modulated signal set at zero volts.
44. Adjust the 800 cps modulated signal to obtain a 35V pp output between pins A8P1-S6 and A8P1-T6.
45. Measure the input voltage between pins A8P1-A9 and A8P1-B9.

REFERENCES:

IMPORTANT: Return all connections to original conditions at the conclusion of this test.

INTERVAL:

TOOLS AND MATERIAL:

A. PREPARATION

1. Apply 27.5±0.1 vdc to pins A10P1-T5 and A10P1-P4.
2. Remove the connection from pins A8P1-A9 and A8P1-B9.
3. Connect an 800 cps test signal to pins A8P1-A9 and A8P1-B9.

B. PROCEDURE

1. Adjust the 800 cps test signal to obtain a 12V rms output between pins A8P1-S6 and A8P1-T6.

   NOTE: Adjust the test signal amplitude and phase (0 or π) such that the voltage between pins A8P1-S6 and A8P1-T6 is nulled if there is an output signal with no input signal applied. Increase the test (input) signal so that the voltage between A8P1-S6 and A8P1-T6 passes through the null, reverses phase and increases to 12V rms.

2. Measure the signal between pins specified in Table I.

TABLE I

TOOLS AND MATERIAL

IMPORTANT: Insure that the G & N System has been finished in a thorough workmanship like manner without subassembly separation.

PROCEDURE

1. Inspect the following equipment in accordance with step 2 without G & N System Subassembly separation:

   NOTE: If continuing from ISS Testing and/or OSS Testing do not inspect items a, b, c, d, p, q, and r.

   a. Inertial Measurement Unit
   b. PIPA Electronics Assembly
   c. Coupling Display Unit
   d. Power Servo Assembly
   e. Command Guidance Computer

      NOTE: System testing may be performed with one DSKY if two DSKY's are not available.

   f. Nav DSKY
   g. Main DSKY
   h. G & N Interconnect Harness "A" Assembly
   i. G & N Interconnect Harness "B" Assembly
   j. G & N Interconnect Harness "C" Assembly
   k. G & N Interconnect Harness "D" Assembly

TOOLS AND MATERIAL

IMPORTANT: Insure that the G & N System has been finished in a thorough workmanship like manner without subassembly separation.

PROCEDURE

1. Inspect the following equipment in accordance with step 2 without G & N System Subassembly separation:

NOTE: If continuing from ISS Testing and/or OSS Testing do not inspect items a, b, c, d, p, q, and r.

a. Inertial Measurement Unit
b. PIPA Electronics Assembly
c. Coupling Display Unit
d. Power Servo Assembly
e. Command Guidance Computer

NOTE: System testing may be performed with one DSKY if two DSKY's are not available.

f. Nav DSKY
g. Main DSKY
h. G & N Interconnect Harness "A" Assembly
i. G & N Interconnect Harness "B" Assembly
j. G & N Interconnect Harness "C" Assembly
k. G & N Interconnect Harness "D" Assembly
l. G & N Interconnect Harness "E" Assembly

VERIFICATION WITH SIDL REQUIRED BEFORE USE

n. G & N Interconnect Harness "G" Assembly
o. G & N Interconnect Harness "H" Assembly
p. G & N Indicator Control Panel
q. Nav Base Assembly
r. Optical Unit Assembly

2. Record the indications resulting from the following inspections performed on the equipment called out in step 1.

a. Insure that all units have met their respective subassembly requirements by a review of inspection status indications such as tags and stamps.
b. Harnesses for nicks, scratches, wire abrasions, loose lacing, dents, encapsulant defects, and pin condition.
c. Mating surfaces for cracks and foreign material.
d. Markings for legibility, appearance and proper registration.
e. Surfaces for scratches, dents, nicks or other obvious defects.
f. All potting material for condition.
g. All plugs and jacks for pin conditions.

G & N SYSTEM TEST TIME

3. Observe and record the following ETI readings indicated on the Power Supply Load Panel:

a. ISS OPERATE
b. WHEEL
c. AGC/LGC
d. OPTICS
e. OIA ON
f. ISS STANDBY

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Insure that the G & N System has been finished in a thorough workmanship like manner without subassembly separation.

PROCEDURE

1. Inspect the following equipment in accordance with step 2 without G & N System Subassembly separation:

NOTE: If continuing from ISS Testing and/or OSS Testing do not inspect items a, b, c, d, p, q, and r.

a. Inertial Measurement Unit
b. PIPA Electronics Assembly
c. Coupling Display Unit
d. Power Servo Assembly
e. Command Guidance Computer

NOTE: System testing may be performed with one DSKY if two DSKY's are not available.

f. Nav DSKY
g. Main DSKY
h. G & N Interconnect Harness "A" Assembly
i. G & N Interconnect Harness "B" Assembly

NOTE: In handling microdot connectors, observe the following precautions. At all times, keep in mind the fact that microdot connectors have a locking action which is

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM VISUAL INSPECTION
JDC 12200 REV D PAGE 2 OF 3
SUBSYSTEM G & N SYSTEM
ASSY

opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. When the plug is disengaged from the receptacle, the ENGAGE marks on the locking ring and main connector body should be aligned and the locking ring should be immovable under light pressure. (If the ENGAGE marks are not aligned at disengagement and/or the locking ring can be rotated, the connector is defective.)

2. The plug is mated to the receptacle using straight-line, push-in, hand pressure. Full engagement is indicated by an audible click. After engagement, the locking ring should be free to rotate 1/8 turn to lock position when the plug and receptacle are aligned. (If the ring cannot be rotated, the plug and receptacle are not fully engaged. If the connection does not hold with the ring in the LOCK position, the connector is defective.)

3. Connectors are disengaged using special tool FA 757702-006 or special tool FA 757702-007. The locking ring is rotated from LOCK to ENGAGE and the finger blade(s) of the tool are inserted between plug and receptacle. Pressure on the tool handle(s) forces connectors apart. Manual disconnection is not recommended since connector damage may result. (If the connector halves can be separated without rotating the ring to engage or if the ring will not rotate from LOCK to ENGAGE, the connector is defective.)

4. Protective covers for exposed microdot connectors are inserted by hand pressure but should be removed using special connector cover removal tool FA 757702-005.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Insure that the G & N System has been finished in a thorough workmanship like manner without subassembly separation.

PROCEDURE

1. Inspect the following equipment in accordance with step 2 without G & N System Subassembly separation:
   - a. Inertial Measurement Unit
   - b. PIPA Electronics Assembly
   - c. Coupling Display Unit
   - d. Power Servo Assembly
   - e. Command Guidance Computer
   - f. Nav DSKY
   - g. Main DSKY
   - h. G & N Interconnect Harness "A" Assembly
   - i. G & N Interconnect Harness "B" Assembly
   - j. G & N Interconnect Harness "C" Assembly
   - k. G & N Interconnect Harness "D" Assembly
   - l. G & N Interconnect Harness "E" Assembly
   - m. G & N Interconnect Harness "F" Assembly
   - n. G & N Interconnect Harness "G" Assembly

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

JOB G & N SYSTEM VISUAL INSPECTION | JDC 12200 REV - PAGE 2 OF 2

SUBSYSTEM G & N SYSTEM | ASSY

   - o. G & N Interconnect Harness "H" Assembly
   - p. G & N Indicator Control Panel
   - q. Nav Base Assembly
   - r. Optical Unit Assembly

2. Record the indications resulting from the following inspections performed on the equipment called out in step 1.
   - a. Insure that all units have met their respective subassembly requirements by a review of inspection status indications such as tags and stamps.
   - b. Harnesses for nicks, scratches, wire abrasions, loose lacing, dents, encapsulant defects, and pin condition.
   - c. Mating surfaces for cracks and foreign material.
   - d. Markings for legibility, appearance and proper registration.
   - e. Surfaces for scratches, dents, nicks or other obvious defects.
   - f. All potting material for condition.
   - g. All plugs and jacks for pin conditions.

G & N SYSTEM TEST TIME

3. **Observe and record the following ETI readings indicated on the Power Supply Load Panel:**
   - a. **ISS OPERATE**
   - b. **WHEEL**
   - c. **AGC/LGC**
   - d. **OPTICS**
   - e. **OIA ON**
   - f. **ISS STANDBY**

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV A PAGE 2 OF 13

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-24) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV A PAGE 3 OF 3

SUBSYSTEM G & N SYSTEM

ASSY

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

18. Connect 56P18 of the "B" Harness to 45J5 of the PSA using Gasket (FD770054) between connectors 56P18 and 45J5. Torque connector screws sequentially to 14 ± 1 inch-pounds.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Connect 56P27 of the "H" Harness to 45J8 of the PSA using Gasket (FD770054) between connectors 56P27 and 45J8. Torque connector screws sequentially to 14 ± 1 inch-pounds.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Connect 56P19 of the "C" Harness to 45J6 of the PSA using Gasket (FD770054) between connectors 56P19 and 45J6. Torque connector screws sequentially to 14 ± 1 inch-pounds.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Connect 56P29 of the "G" Harness to 45J10 of the PSA using Gasket (FD770054) between connectors 56P29 and 45J10. Torque connector screws sequentially to 14 ± 1 inch-pounds.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Connect 56P28 of the "F" Harness to 45J9 of the PSA using Gasket (FD770054) between connectors 56P28 and 45J9. Torque the connector screws sequentially to 14 ± 1 inch-pounds.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

Figure 2. Mounting Hardware

28. Connect 56P26 of the "E" Harness to 45J7 of the PSA using Gasket (FD770054) between connectors 56P26 and 45J7. Torque the connector screws sequentially to 14 ± 1 inch-pounds.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Connect 56P17 of the "D" Harness to connector GN F J2, on the back wall of the Cradle Assembly using Gasket (FD770054) between connectors 56P17 and GN F J2. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P29 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

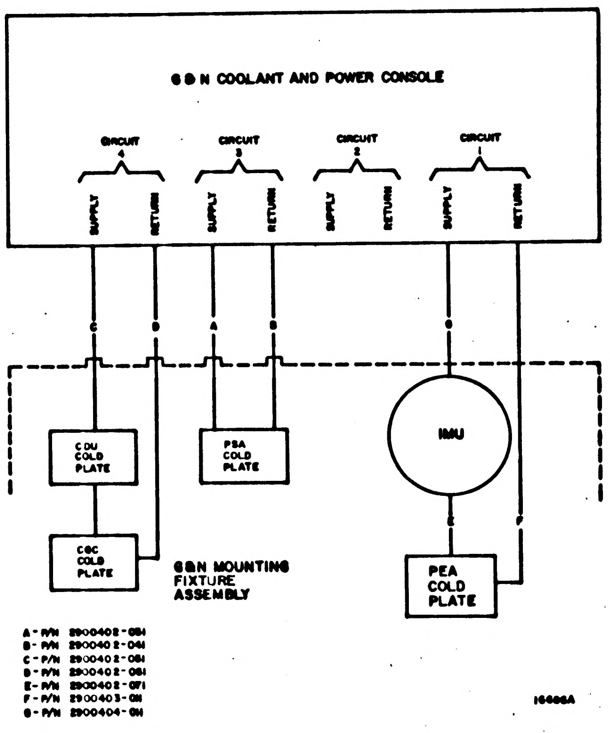

Figure 3.

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF NAV DSKY

50. Position Nav DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect J25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the

G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 27 (±3) inch-pounds in approximately 10 inch-pound increments.

82. Connect 56P33 of the "F" Harness and 56P3 of the "B" Harness to the Optics Assembly. Connect 56P14 of the "B" Harness to 65A1J2 of the Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

MAIN PANEL DSKY INSTALLATION

87. Position the MAIN DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

REFERENCES

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-24) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM

ASSY

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C4-6).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

DATE

SUBSYSTEM G & N SYSTEM

ASSY

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

DATE 30 JUN 66

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connett harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J9 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P19 on guide pins of GN F J2, ease the harness plug onto

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P29 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF NAV DSKY

50. Position Nav DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect J25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

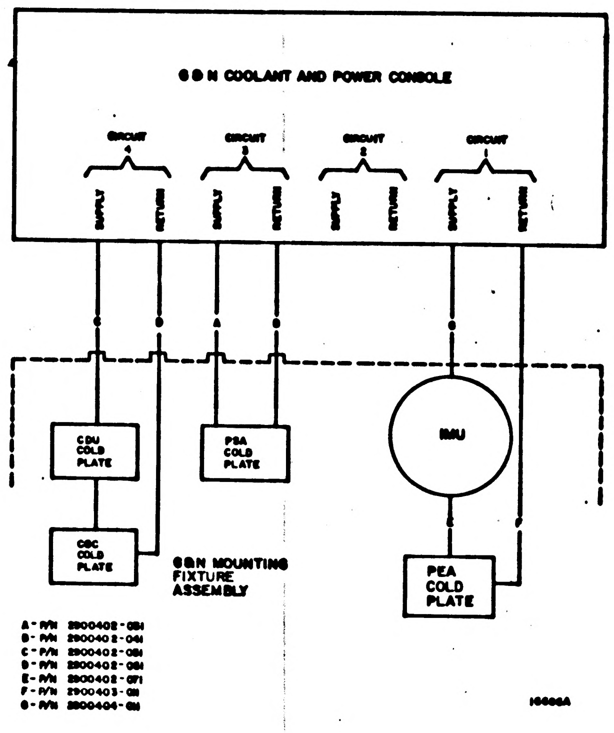

Figure 3.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

> NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

> NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 56J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

MAIN PANEL DSKY INSTALLATION

87. Position the MAIN DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the MAIN DSKY.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV C PAGE 2 OF 16

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-24) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV C PAGE 3 OF 16

SUBSYSTEM G & N SYSTEM

ASSY

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

JDC 12201 REV C PAGE 4 OF 16

SUBSYSTEM G & N SYSTEM

ASSY

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

DATE 30 JUN 66

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connett harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J9 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P19 on guide pins of GN F J2, ease the harness plug onto

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P29 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect J25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

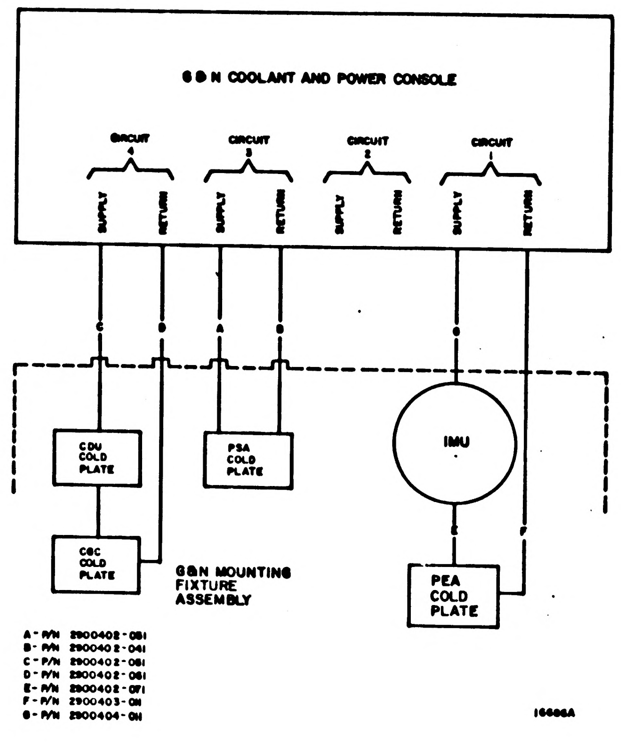

Figure 3.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

---

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

DATE 30 JUN 66

---

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

DATE

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV D PAGE 2 OF 16

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

SUBSYSTEM G & N SYSTEM

ASSY

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

DATE 30 JUN 66

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connect harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J9 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P19 on guide pins of GN F J2, ease the harness plug onto

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P29 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect J25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

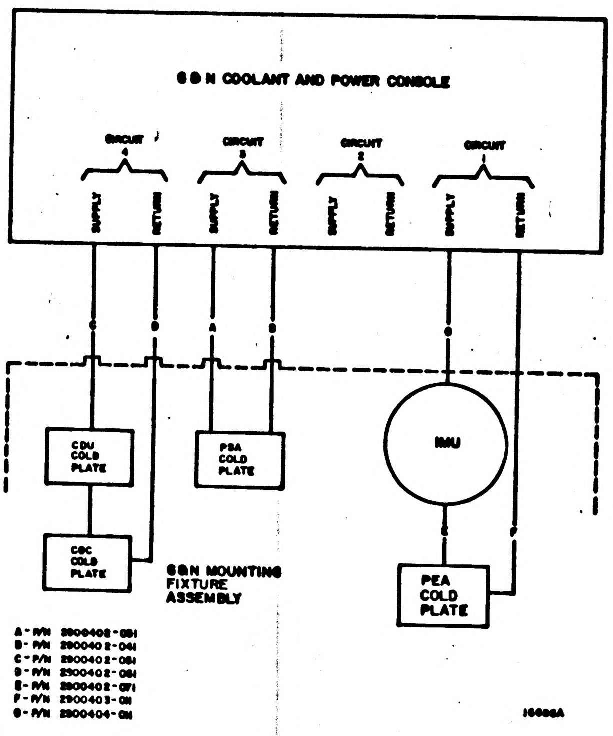

Figure 3.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

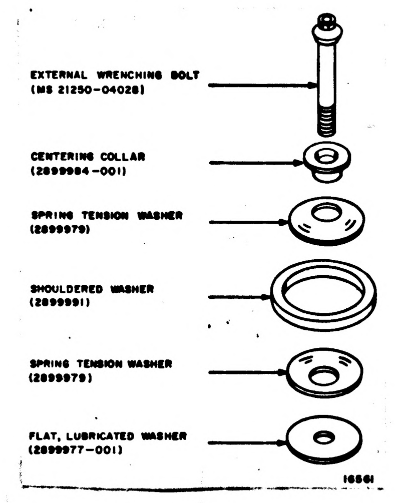
64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.



EXTERNAL WRENCHING BOLT (MS 21250-04028)
CENTERING COLLAR (2899984-001)
SPRING TENSION WASHER (2899979)
SHOULDERED WASHER (2899991)

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect J25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

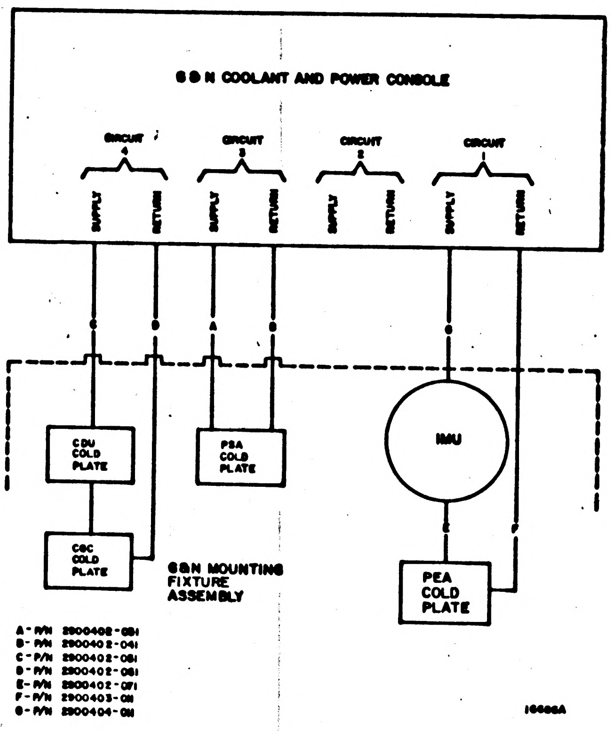

Figure 3.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

---

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

Performance of this JDC required [illegible] during steps

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

DATE 30 JUN 66

---

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C416).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

DATE ______

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV E PAGE 2 OF 16

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

DATE 30 JUN 66

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connett harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P17 on guide pins of GN F J2, ease the harness plug onto

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connect harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P17 on guide pins of GN F J2, ease the harness plug onto

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 1.

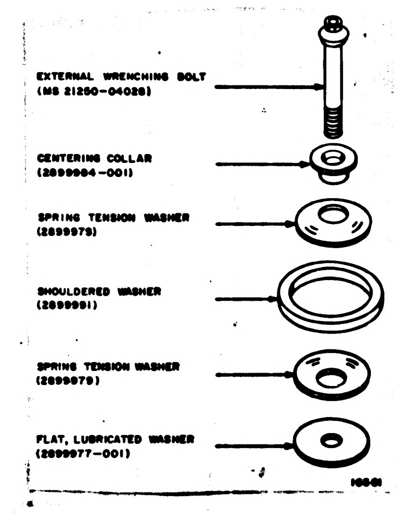

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp. (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in outout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

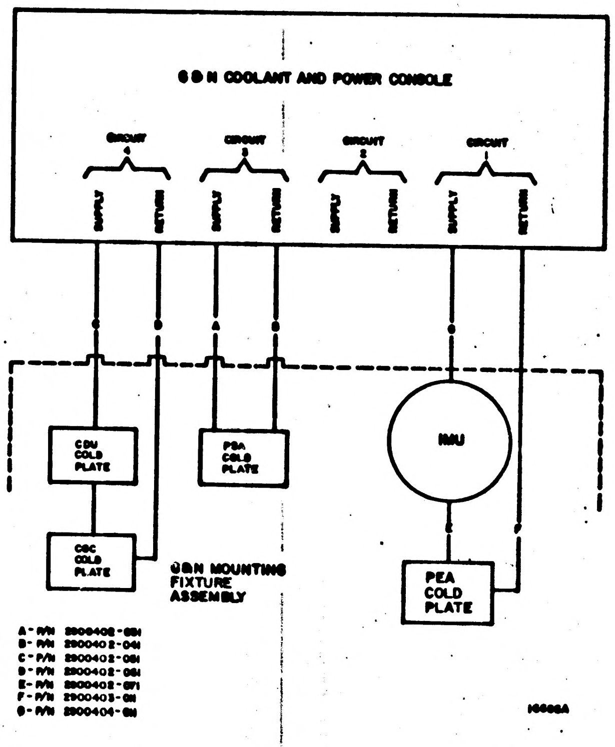

Figure 3.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

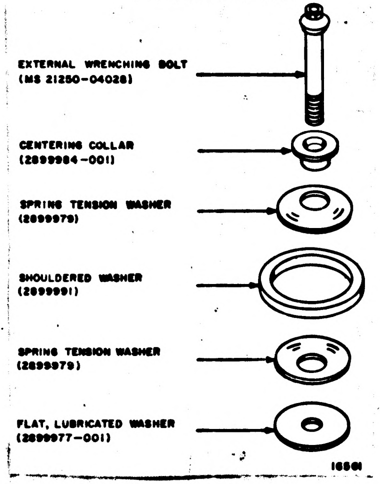
64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.



EXTERNAL WRENCHING BOLT (MS 21250-04028)

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp. (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

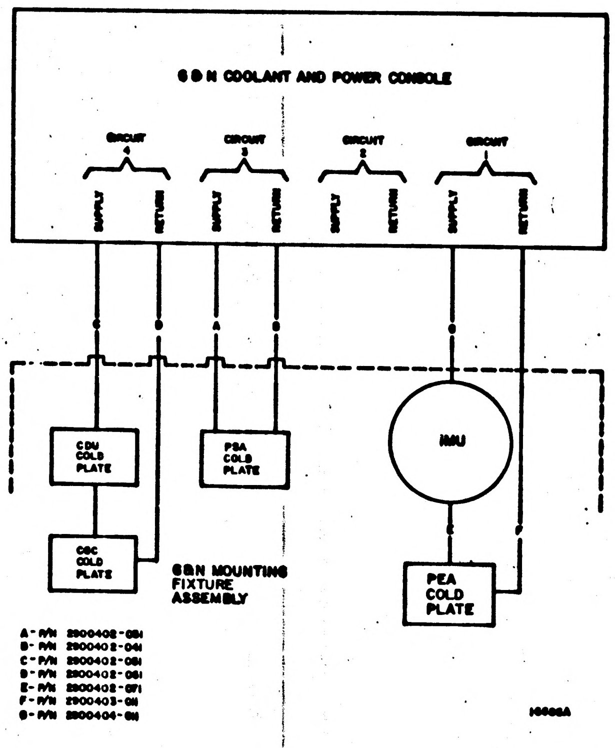

Figure 3.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

---

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. F PAGE 1 OF 16

INITIAL TDRR 29882 DS PGS -

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G.S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

4.A. Install three Fixed Memory Rope Modules and one Fixed Memory Jumper Module in CGC as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

NOTE: Once these modules have been installed, they should remain in the CGC unless replacement is required due to malfunction.

B1 Fixed Memory Rope Module	B2 Fixed Memory Rope Module
B3 Fixed Memory Rope Module	B4 Fixed Memory Jumper Module
B5 Vacant	B6 Vacant

Figure 1.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connett harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P17 on guide pins of GN F J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

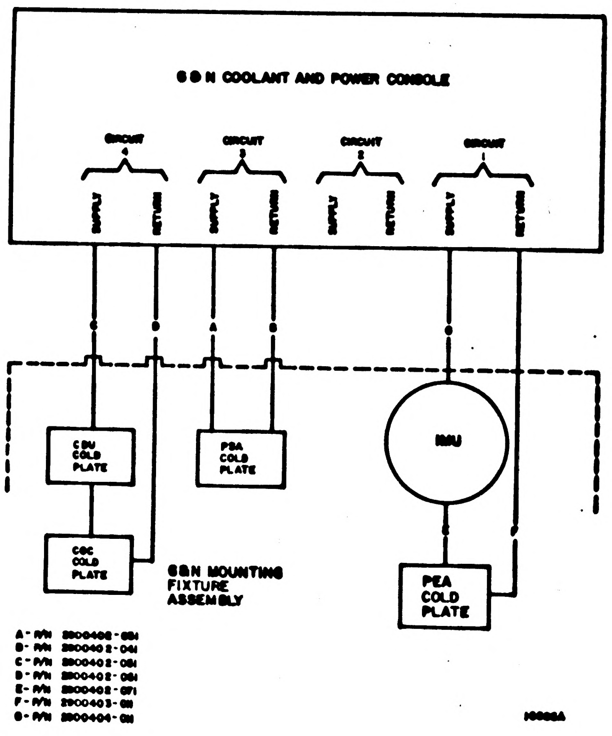

Figure 3.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

---

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. G PAGE 1 OF 16
INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

							TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV G PAGE 2 OF 16

SUBSYSTEM G & N SYSTEM | ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Grease (G. S. #53087)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

4.A. Install three Fixed Memory Rope Modules and one Fixed Memory Jumper Module in CGC as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

NOTE: Once these modules have been installed, they should remain in the CGC unless replacement is required due to malfunction.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV G PAGE 3 OF 16

SUBSYSTEM G & N SYSTEM | ASSY

B1 Fixed Memory Rope Module	B2 Fixed Memory Rope Module
B3 Fixed Memory Rope Module	B4 Fixed Memory Jumper Module
B5 Vacant	B6 Vacant

Figure 1.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV G PAGE 4 OF 16

SUBSYSTEM G & N SYSTEM | ASSY

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

DATE 30 JUN 66

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connect harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P17 on guide pins of GN F J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

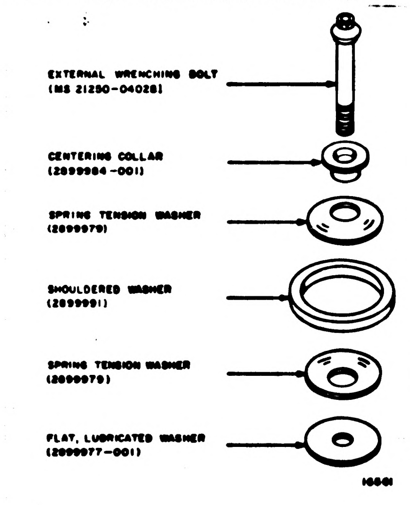
32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 3.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).



EXTERNAL WRENCHING BOLT (MS 21250-04028)
CENTERING COLLAR (2899984-001)
SPRING TENSION WASHER (2899979)
SHOULDERED WASHER (2899991)
SPRING TENSION WASHER (2899979)
FLAT, LUBRICATED WASHER (2899977-001)
16661

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

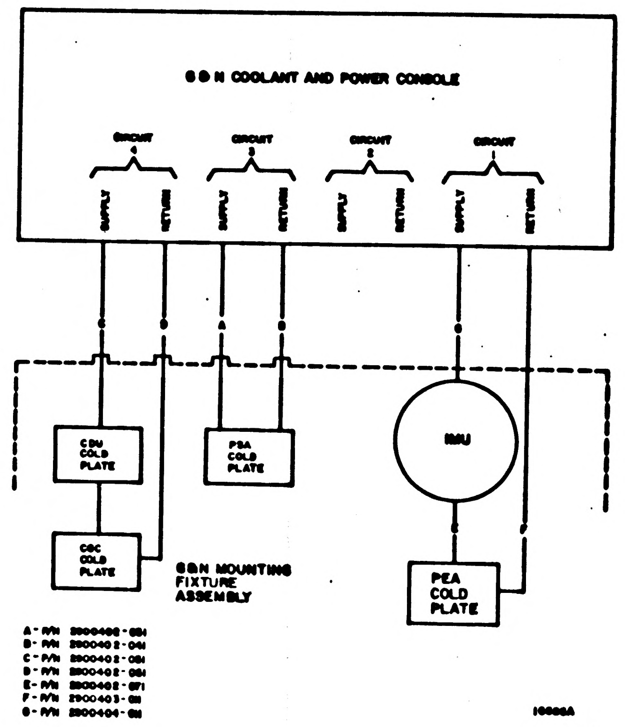


Figure 3.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. H PAGE 1 OF 16

INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

FORM 00143
Chg. 7-23-65

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

4.A. Install three Fixed Memory Rope Modules and one Fixed Memory Jumper Module in CGC as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

NOTE: Once these modules have been installed, they should remain in the CGC unless replacement is required due to malfunction.

B1 Fixed Memory Rope Module	B2 Fixed Memory Rope Module
B3 Fixed Memory Rope Module	B4 Fixed Memory Jumper Module
B5 Vacant	B6 Vacant

Figure 1.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket FD770054 on PSA connector 45J6 and connect harness plug 56P19 to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket FD770054 on PSA connector 45J5 and connect harness plug 56P18 to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket FD770054 on PSA connector 45J10 and connect harness plug 56P29 to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket FD770054 on PSA connector 45J8 and connett harness plug 56P27 to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

26. Place gasket FD770054 on PSA connector 45J9 and connect harness plug 56P28 to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket FD770054 on PSA connector 45J7 and connect harness plug 56P26 to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place a gasket FD770054 on connector GN F J2 (on the back wall of the Cradle Assembly) and connect harness plug 56P17 to GN F J2 as follows:

a. Carefully locate 56P17 on guide pins of GN F J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

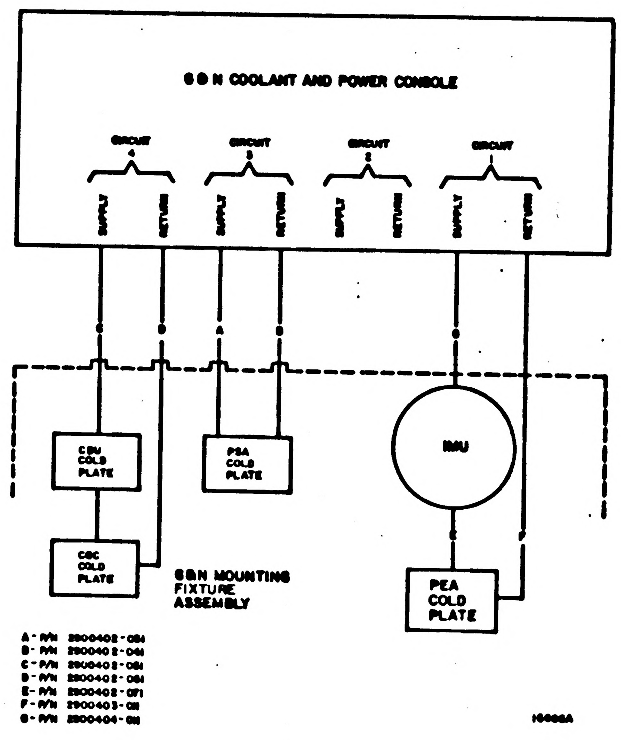

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. J PAGE 1 OF 16
INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

Rev. Let.	Date	TDRR NO.	PAGES REVISED JDC	PAGES REVISED D.S.	APPROVAL MIT	APPROVAL NASA	REFERENCES

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 00143
Chg 7-23-65

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

4.A. Install three Fixed Memory Rope Modules and one Fixed Memory Jumper Module in CGC as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

NOTE: Once these modules have been installed, they should remain in the CGC unless replacement is required due to malfunction.

B1 Fixed Memory Rope Module	B2 Fixed Memory Rope Module
B3 Fixed Memory Rope Module	B4 Fixed Memory Jumper Module
B5 Vacant	B6 Vacant

Figure 1.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Table I (Cont.)

GSE-GSE Interconnections

From	Conn. No.		Cable and Drawing No.	Conn. No.		To
"G" Harness	P20	J5	GNF "C" Harness (2900924)	J3	P2	W165
	P21	J4		P7	J2	SCM, when applicable
				P8	J1	
	P22	J6	GNF "D" Harness (2900925)	P9	J3	
Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

Figure 2

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

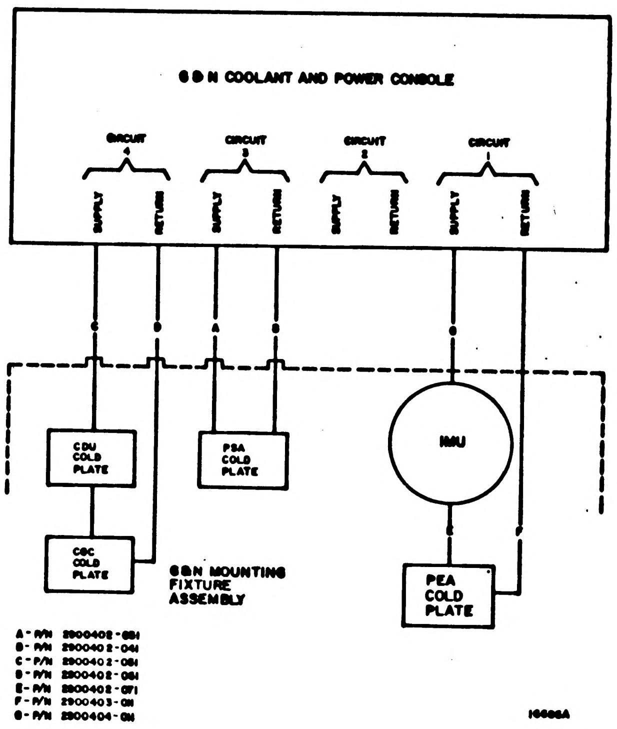

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

> NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

> NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.
>
> Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

> NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

> NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. K PAGE 1 OF 16
INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

4A. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown on Figure 1. Tighten screws on modules to 15-19 in-lbs.

DATE 30 JUN 66

B1 Fixed Memory Rope Module	B2 Fixed Memory Rope Module
B3 Fixed Memory Rope Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-323).

DATE 30 JUN 66

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

Figure 2

DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

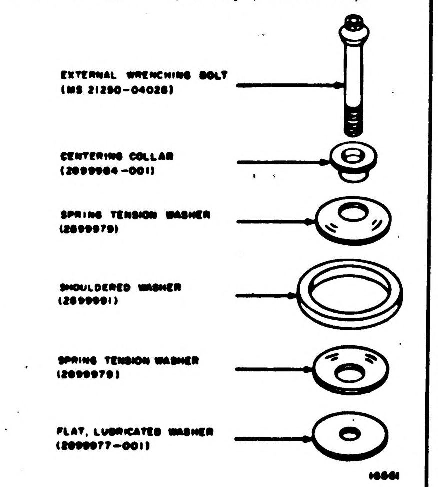

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

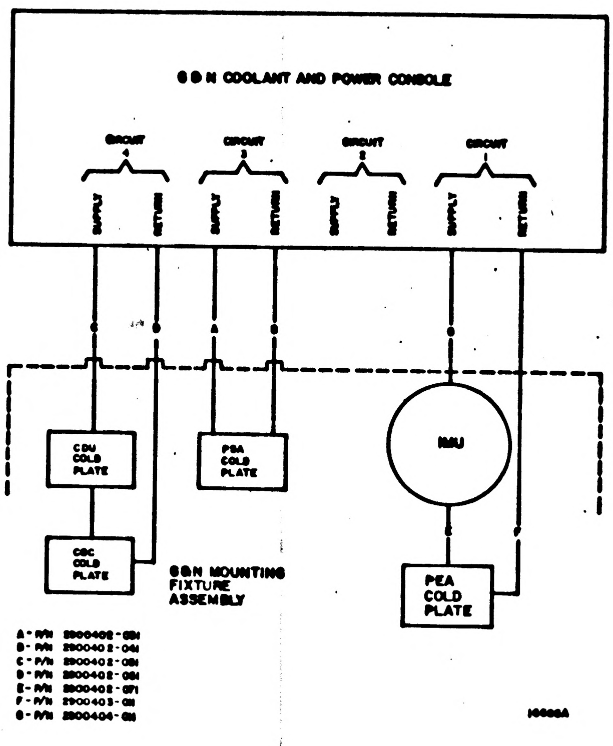

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs. Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. L PAGE 1 OF 16

REFERENCES

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 00143
Chg. 1-23-65

JOB G & N SYSTEM FOR TESTING | JDC 12201 REV L PAGE 2 OF 16

SUBSYSTEM G & N SYSTEM | ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

4A. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown on Figure 1. Tighten screws on modules to 15-19 in-lbs.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV L PAGE 3 OF 16

SUBSYSTEM G & N SYSTEM | ASSY

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV L PAGE 4 OF 16

SUBSYSTEM G & N SYSTEM | ASSY

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

DATE 30 JUN 66

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

Figure 2

DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

16961

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-322) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

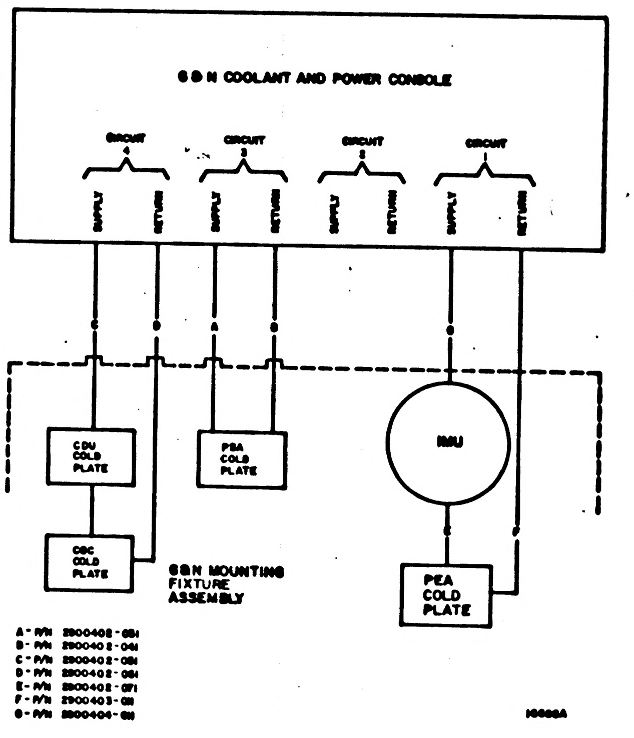

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt, (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

REFERENCES

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

ASSEMBLY AND PREPARATION OF
JOB G & N SYSTEM FOR TESTING | JDC 12201 REV M PAGE 10 OF 16
SUBSYSTEM G & N SYSTEM | ASSY

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

Figure 2

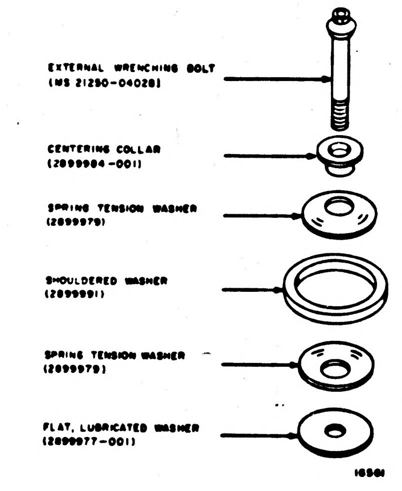
DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).



EXTERNAL WRENCHING BOLT (MS 21250-04028)

FLAT, LUBRICATED WASHER (2899977-001)
16561

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

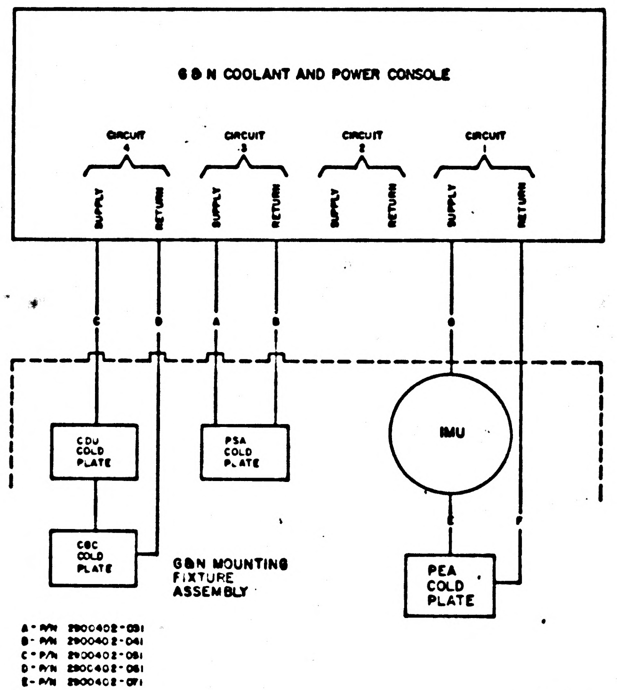

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV. N PAGE 1 OF 17

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

FORM 0-143
Chg. 7-23-66

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35306-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

---

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV N PAGE 11 OF 17

SUBSYSTEM G & N SYSTEM | ASSY

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

Figure 2

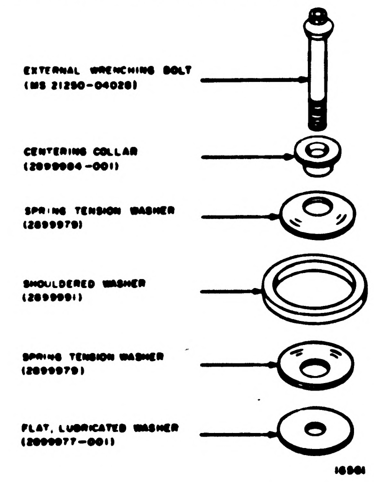
DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).



EXTERNAL WRENCHING BOLT (MS 21250-04026)

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

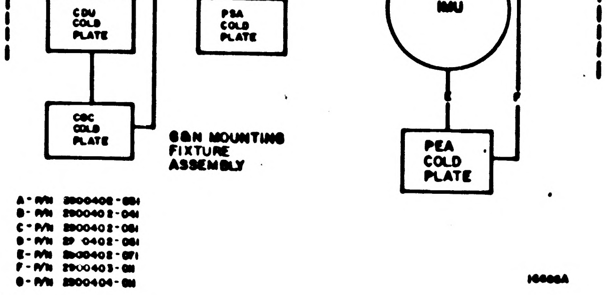

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-063). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten, in numerical sequence, to 50-55 inch-pounds in approximately 10 inch-pound increments. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM FOR TESTING

JDC 12201 REV P PAGE 2 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

SUBSYSTEM G & N SYSTEM

ASSY

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV P PAGE 4 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

DATE 30 JUN 66

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

---

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20 25 inch-pounds.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING	JDC 12201 REV P PAGE 11 OF 17
SUBSYSTEM G & N SYSTEM	ASSY

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

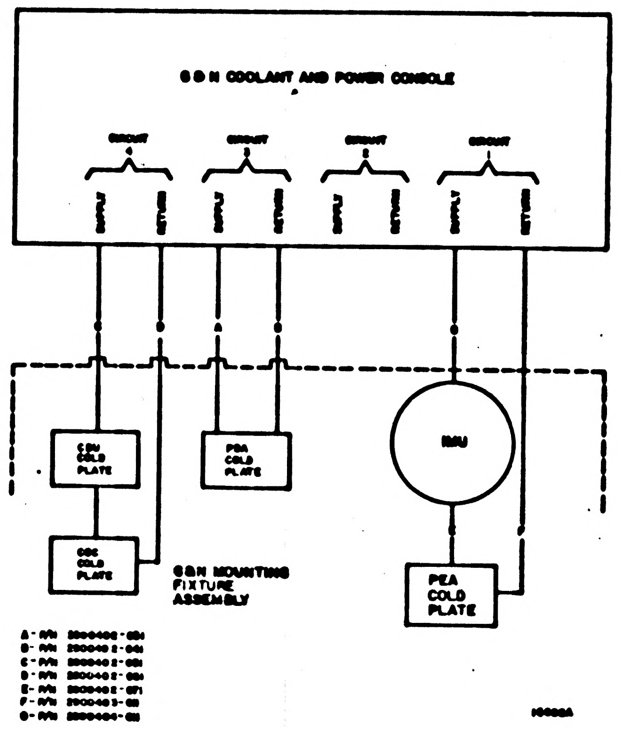

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-063). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten three bolts to 50-55 inch-pounds in 10 inch-pound increments, starting with SXT side, then SCT side, and then center. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV. R PAGE 1 OF 17
INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components. Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Lubricant (MIL M7866) (Alphamolykote type Z NAA Spec MA 0112-02)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P5 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

	P22	J6	GNF "D" Harness (2900925)	P9	J3	
Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

ASSEMBLY AND PREPARATION OF JOB G & N SYSTEM FOR TESTING	JDC 12201 REV R PAGE 11 OF 17
SUBSYSTEM G & N SYSTEM	ASSY

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

Figure 2

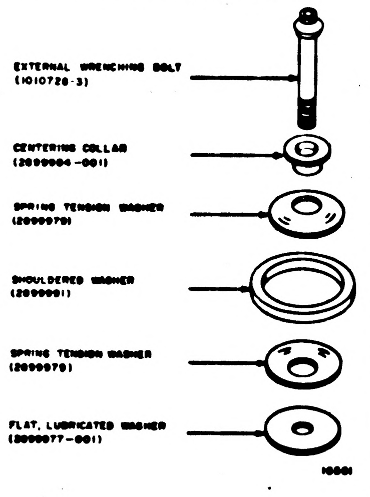
DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).



EXTERNAL WRENCHING BOLT (1010728-3)

16661

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

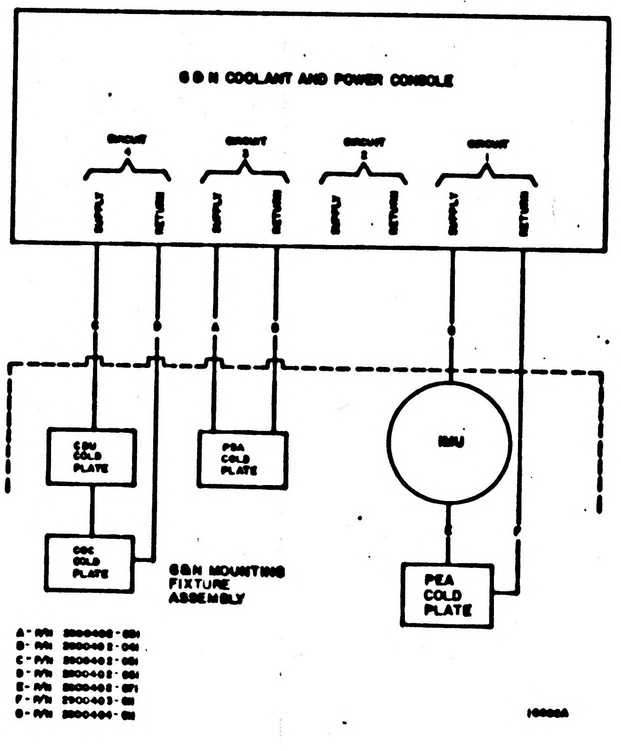

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-063). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds). A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of lubricant (MIL M7866) on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten three bolts to 50-55 inch-pounds in 10 inch-pound increments, starting with SXT side, then SCT side, and then center. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Powder, Molybdenum Disulfide SCD 1008955 (Molykote powder)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P8 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Deleted.

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

---

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35306-322).

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

Figure 2

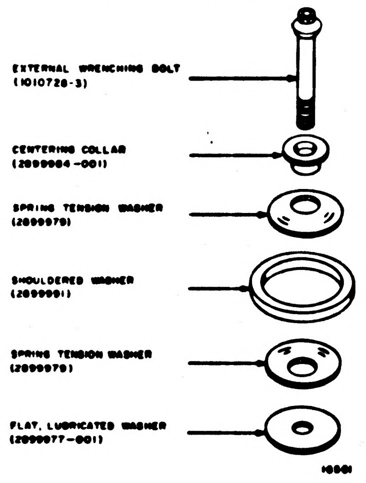
DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).



EXTERNAL WRENCHING BOLT (1010728-3)

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

---

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

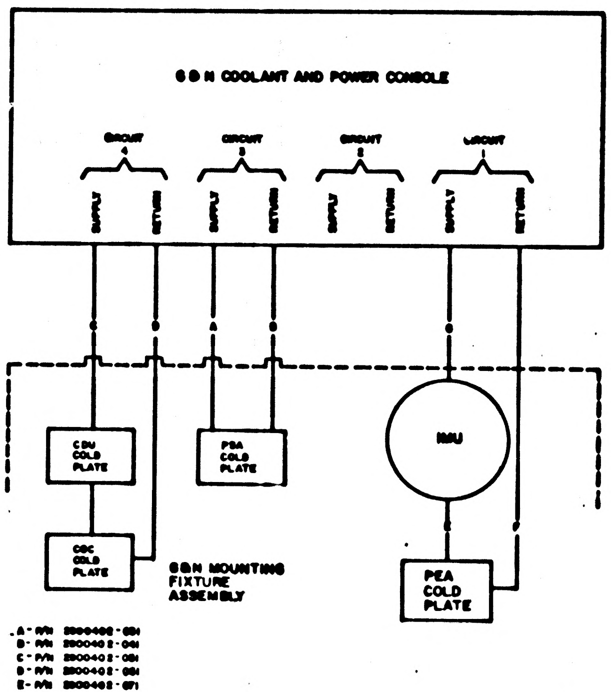

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-063). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds. A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds).

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place thin coating of Molykote powder on the mounting bolt threads. Wipe off all but a thin coating with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten three bolts to 50-55 inch-pounds in 10 inch-pound increments, starting with SXT side, then SCT side, and then center. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: 1. The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

2. Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

3. Refer to JDC 17104 for removal and replacement procedures when complete G & N System disassembly or component removal is to be accomplished.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM FOR TESTING

JDC 12201 REV T PAGE 2 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Powder, Molybdenum Disulfide SCD 1008955 (Molykote powder)

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P8 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Deleted.

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV T PAGE 4 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C448).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

DATE 30 JUN 66

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

---

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly [illegible]re on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

Figure 2

DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

16561

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

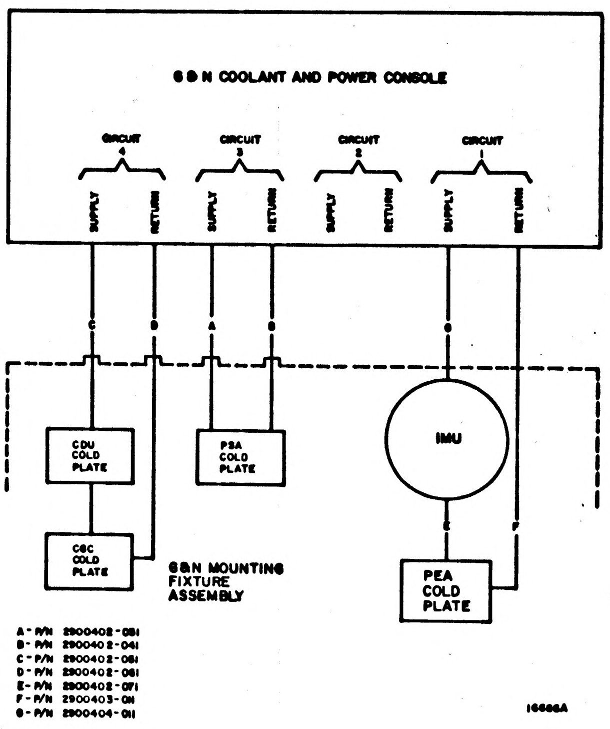

Figure 4.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds. A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds).

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place thin coating of Molykote powder on the mounting bolt threads. Wipe off all but a thin coating with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten three bolts to 50-55 inch-pounds in 10 inch-pound increments, starting with SXT side, then SCT side, and then center. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

---

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: 1. The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

2. Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

3. Refer to JDC 17104 for removal and replacement procedures when complete G & N System disassembly or component removal is to be accomplished.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

JOB G & N SYSTEM FOR TESTING

JDC 12201 REV U PAGE 2 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Powder, Molybdenum Disulfide SCD 1008955 (Molykote powder)
1	Polyurethane foam cleanroom wiper

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV U PAGE 3 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P8 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Deleted.

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV U PAGE 4 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

DATE 30 JUN 66

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

---

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING | JDC 12201 REV U PAGE 11 OF 17

SUBSYSTEM G & N SYSTEM | ASSY

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

DATE 30 JUN 66

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

> CAUTION: Use polyurethane foam cleanroom wiper to prevent coolant spillage on airborne equipment by wrapping wiper around quick-disconnect during mating and demating operations.

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

FLAT, LUBRICATED WASHER (2899977-001)
16861

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA Coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

---

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the Inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

> NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

> CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

> NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

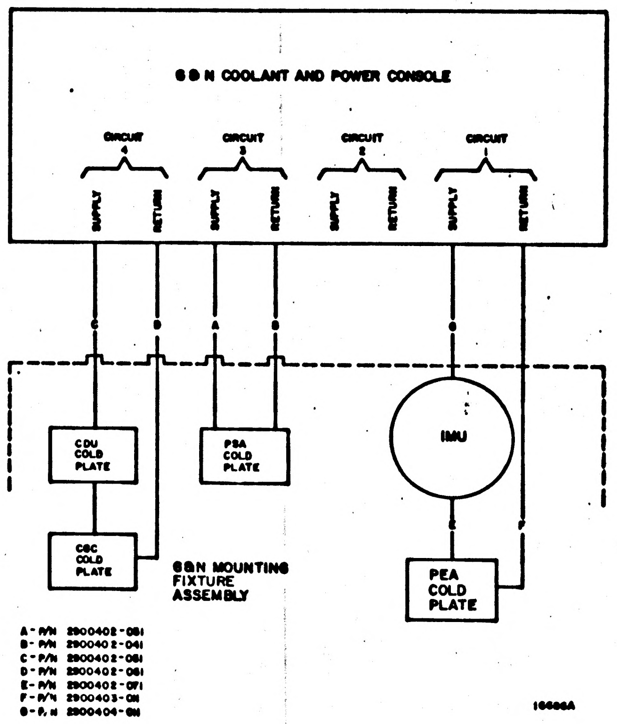

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds. A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds).

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

> NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place thin coating of Molykote powder on the mounting bolt threads. Wipe off all but a thin coating with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

CAUTION: Use polyurethane foam cleanroom wiper to prevent coolant spillage on airborne equipment by wrapping wiper around quick-disconnect during mating and demating operations.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the FTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs. Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten three bolts to 50-55 inch-pounds in 10 inch-pound increments, starting with SXT side, then SCT side, and then center. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV. V PAGE 1 OF 17

INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: 1. The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

2. Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

3. Refer to JDC 17104 for removal and replacement procedures when complete G & N System disassembly or component removal is to be accomplished.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 0014A
Chg. 1 - 8-66

JOB G & N SYSTEM FOR TESTING

JDC 12201 REV V PAGE 2 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054) or environmental gaskets
1	Navigation Base Assembly Sling and Handling Fixture
1	G & N System Equipment (2015000).
	Powder, Molybdenum Disulfide SCD 1008955 (Molykote powder)
1	Polyurethane foam cleanroom wiper

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 2.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

CAUTION: During the installation of assets the G&N Mounting Fixture may be positioned for convenience and accessibility. Use extreme care when tilting the G&N Mounting Fixture to insure that components do not strike cradle locking handles.

3. Tilt Cradle to a Horizontal position. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly.

4. Install three fixed memory rope modules and either one or three jumper modules in CGC as specified on Drawing 2021104 and as shown in Figure 1. Tighten screws on modules to 15-19 in-lbs.

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM

ASSY

B1 Fixed Memory Module	B2 Fixed Memory Module
B3 Fixed Memory Module	B4 Jumper Module
B5 Vacant or Jumper Module	B6 Vacant or Jumper Module

Figure 1.

4A. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-25) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU as follows:

a. Visually inspect connectors 56P9 and 56P10 and the connectors on the CGC and CDU to insure that pins and sockets are not bent or damaged.

b. Carefully locate 56P10 on the guide pins of the CGC connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

e. Carefully locate 56P9 on the guide pins of the CDU connector, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

f. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

g. On the sides of the harness plug, tighten two captive screws and torque to 19±1 in-lbs.

7. Connectors 56P1 through 56P8 will be connected in a later step. Use some means to protect these connectors until they are connected.

8. Deleted.

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

DATE 30 JUN 66

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV V PAGE 4 OF 17

SUBSYSTEM G & N SYSTEM

ASSY

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF "B" Harness P6 to 45J4 on PSA.

NOTE: Before connecting any harness plugs visually inspect the pins and sockets to insure that they are not bent or damaged.

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position

DATE 30 JUN 66

when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.) CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

18. Place gasket on PSA connector 45J6 and connect plug 56P19 of "C" Harness to 45J6 as follows:

a. Carefully locate 56P19 on the guide pins of 45J6, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

19. Attach "B" Harness of the G and N Harness Assembly to the left hand wall of the G and N Fixture Cradle Assembly using four hinged loop clamps.

20. Place gasket on PSA connector 45J5 and connect plug 56P18 of "B" Harness to 45J5 as follows:

a. Carefully locate 56P18 on the guide pins of 45J5, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

21. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322).

---

22. Place gasket on PSA connector 45J10 and connect plug 56P29 of "G" Harness to 45J10 as follows:

a. Carefully locate 56P29 on guide pins of 45J10, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

23. Attach "C" Harness to the left hand wall of the G and N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

24. Place gasket on PSA connector 45J8 and connect plug 56P27 of "H" Harness to 45J8 as follows:

a. Carefully locate 56P27 on guide pins of 45J8, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

25. Attach "G" Harness to the right hand wall using two clamps and bracket assemblies and two hinged loop clamps.

26. Place gasket on PSA connector 45J9 and connect plug 56P28 of "F" Harness to 45J9 as follows:

a. Carefully locate 56P28 on the guide pins of 45J9, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

28. Place gasket on PSA connector 45J7 and connect plug 56P26 of "E" Harness to 45J7 as follows:

a. Carefully locate 56P26 on guide pins of 45J7, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

Temp Ind. (GBD)	A1J3	P1	W145 (2900589)	P2	J1	W171 (GNF "A" Harness)

NOTE: * Do not connect cable W65. This connection will be made later in accordance with specified procedures.

** Cable W26 must be connected before cable W85.

*** GNF "A" Harness connection P4 to J1 of PSA coldplate must be connected after installation of PSA.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Place gasket on GNF "B" Harness connector J2 (on the back wall of the Cradle Assembly) and connect plug 56P17 of "D" Harness to J2 as follows:

a. Carefully locate 56P17 on guide pins of J2, ease the harness plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four jackscrews until finger tight.

b. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged torque each jackscrew to 19±1 in-lbs.

c. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs. Connect 56P1, P2, P3, P4, and P5 of the "A" Harness to connectors 56J1, J2, J3, J4, and J5 on connector bracket (2900935).

NOTE: Do not fasten hinged loop clamp on branch to P17 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

NOTE: *To be connected as required in JDC procedures.

**If computer test set is not present, connector assembly (2003099) must be installed on CGC test connector.

***If test station does not contain a Rotary Table, eliminate W64 connection and connect cables W37, W130, W127, W168, and W128 (2 cables) directly to E1 on GNB. If test station does not contain a Subsystem Mounting Fixture, eliminate W129 connection and make W128 connection directly to E3 on GSE Distribution Box.

NOTE: Insure that all GSE cable shielding pigtails are properly connected to the G & N Mounting Fixture.

Figure 2

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

CAUTION: Use polyurethane foam cleanroom wiper to prevent coolant spillage on airborne equipment by wrapping wiper around quick-disconnect during mating and demating operations.

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See figure 4.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

Figure 3. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA Coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

---

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF DSKY

NOTE: Perform steps 50 and 51 if one or two DSKY's are being used for system tests.

50. Position DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

CAUTION: Use extreme care when installing connector to J9 on the DSKY to prevent pin damage. Adapter cables may be used on the DSKY connector J9 to facilitate harness connections and to prevent pin damage.

51. Connect 56P25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

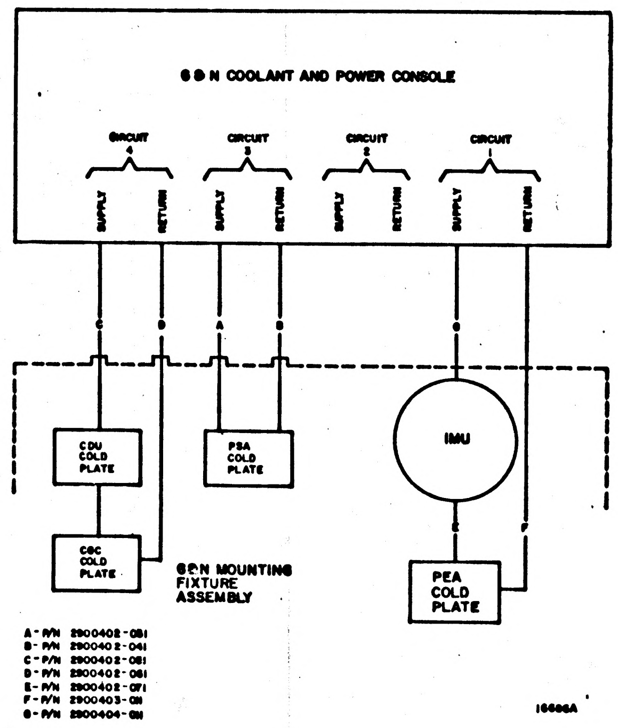

Figure 4.

---

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque tight (not to exceed 65 inch-pounds). Torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds. A torque wrench cannot be used because of space limitations so above torque requirement is for reference only.

56. Install all four Internal Wrenching bolts (1010727-1) and washers (1897006-063) to the right hand and left hand mount assemblies and torque tight (not to exceed 150 inch-pounds).

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place thin coating of Molykote powder on the mounting bolt threads. Wipe off all but a thin coating with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

69. Remove Plug Gage from the lower left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole, insert sleeve bushing (2021204), and insert mounting bolt (NAS 674V19). Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

CAUTION: Use polyurethane foam cleanroom wiper to prevent coolant spillage on airborne equipment by wrapping wiper around quick-disconnect during mating and demating operations.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU and connect coolant hoses to IMU.

NOTE: The following three steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY ON NAV BASE

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs. Set the G&N Mounting Fixture Tilt Axis to the required position to insure correct installation of precision balls in step 79.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 3. Tighten three bolts to 50-55 inch-pounds in 10 inch-pound increments, starting with SXT side, then SCT side, and then center. Back off the bolts approximately 75 degrees.

NOTE: Return G&N Mounting Fixture Tilt Axis to approximately 32.5°.

82. Connect 56P23 of "F" Harness and 56P13 of "B" Harness to Optics Assembly. Connect 56P14 of "B" Harness to 65A1J2 of Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 of "E" Harness to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

INSTALLATION OF SECOND DSKY

NOTE: Perform steps 87 and 88 only if two DSKY's are being used for system tests.

87. Position the DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

88. Connect P3 of cable W160 to the DSKY.

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV. - PAGE 1 OF 13

INITIAL TDRR 29882 D.S. PGS -

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION Assembly of Guidance Components into a complete G & N System Test Configuration and preparation of GSE and G & N System for acceptance testing.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See below

IMPORTANT: The G & N System must be handled and installed with extreme care. It contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. A proper installation procedure and sequence is required to prevent possible damage or degradation of G & N System and components.

TOOLS AND MATERIAL: Acceptable results are contingent upon the use of equipment and material equivalent to that listed below. If protection to equipment and safety of personnel is not degraded, items equivalent to those recommended may be substituted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV - PAGE 2 OF 13

SUBSYSTEM G & N SYSTEM

ASSY

Item and number required	Description
1 Set	A set of torque wrenches with a range of 1 to 250 inch-pounds with adapters.
1 Set	Gaskets (FD 770054)
1	Navigation Base Assembly Sling and Handling Fixture.
1	G & N System Equipment (2015000).

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. A thorough visual examination of all GSE equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment and to cable bundles, harnesses and connectors.

B. PROCEDURES

NOTE: All directions given are for a technician facing south in front of the G & N Mounting Fixture. Insure that the IMU, PSA, CGC, CDU and PEA coldplates have been purged and filled. If not, refer to JDC 18045 for applicable procedures.

GSE-GSE PREPARATIONS

1. Place Prime Power Circuit breaker located on back of the OIA Console to the OFF position.

2. Insure that the cables indicated in Table 1 are connected, exceptions are indicated. (See Figure 1.) Insure that no other cables between the GSE Distribution Box and the GSE Consoles are connected.

INSTALLATION OF CGC AND CDU

3. Tilt Cradle to a Horizontal position.

4. Install the CGC to the coldplate on the lower right side of the Mounting Fixture with 14 hex-head screws (MS16996-24) and 28 flat washers, two for each screw, (AN-960C416L). Torque to 65-70 inch-pounds.

5. Remove G & N Cradle Support Plate (2900636) from Cradle Assembly. Install the CDU to the coldplate on the lower left side of the Mounting Fixture with 12 hex-head screws screws (MS16996-23) and 24 flat washers (AN960C416L). Torque to 65-70 inch-pounds.

6. Connect 56P10 of the "A" Harness to the CGC and 56P9 to the CDU.

7. Connect 56P1 through 56P5 to 56J1 through 56J5 on the connector bracket on the rear of the Mounting Fixture Cradle.

8. Connect 56P6, 56P7 and 56P8 to the connector bracket (2900936) on the right rear side of the Mounting Fixture Cradle with button-head screws (1006783-19) and hex nuts (1012525-002).

DATE ________

JOB ASSEMBLY AND PREPARATION OF G & N SYSTEM FOR TESTING

JDC 12201 REV - PAGE 3 OF 13

SUBSYSTEM G & N SYSTEM

ASSY

INSTALLATION OF CGC BUFFER ASSEMBLY

9. Remove Brackets (2900637) and (2900639) from G & N Cradle Support Plate.

10. Replace G & N Cradle Support Plate on bottom of Cradle Assembly.

11. Mount the Brackets to the Buffer Assembly with the captive hardware on Bracket.

12. Mount the Buffer Assembly and Brackets on the Cradle Assembly and connect ground strap.

13. Tilt Cradle Assembly to approximately 0°.

INSTALLATION OF PSA

14. Remove the PSA coldplate (2900725-021) from the Mounting Fixture Cradle Assembly.

15. Attach the coldplate to the PSA using captive hardware in coldplate. Torque to 20-25 inch-pounds.

16. Insert the PSA Coldplate Assembly in the Mounting Fixture Cradle Assembly and fasten with six hex-head cap screws (MS35308-322) and flat washers (AN960C446).

INSTALLATION OF G & N HARNESS ASSEMBLY

17. Connect GNF P6 to 45J4 on the PSA.

18. Connect 56P19 of the "C" Harness to 45J6 of the PSA using Gasket (FD770054) between connectors 56P19 and 45J6.

19. Attach "C" Harness to the left hand wall of the G & N Fixture Cradle Assembly using two hinged loop clamps and two loop clamps.

20. Connect 56P18 of the "B" Harness to 45J5 of the PSA using Gasket (FD 770054) between connectors 56P18 and 45J5.

21. Attach "B" Harness of the G & N Harness Assembly to the left hand wall of the G & N Fixture Cradle Assembly using four hinged loop clamps.

22. Connect 56P29 of the "G" Harness to 45J10 of the PSA using Gasket (FD 770054) between connectors 56P29 and 45J10.

23. Attach "G" Harness to the right hand wall using two clamp and bracket assemblies and two hinged loop clamps. Mate connectors P20, P21 and P22 to connectors GN F J5, GN F J4, and GN F J6.

24. Connect 56P27 of the "H" Harness to 45J8 of the PSA using Gasket (FD 770054) between connectors 56P27 and 45J8.

25. Attach "H" Harness to right hand wall using three hinged loop clamps. Feed connector J5 under rear wall and attach to connector bracket (2900935) using hex-head cap screws (MS35308-322) and hex nuts (1012525-002).

26. Connect 56P28 of the "F" Harness to 45J9 of the PSA using Gasket (FD 770054) between connectors 56P28 and 45J9.

27. Attach "F" Harness to right hand wall using two hinged loop clamps.

DATE____________

28. Connect 56P26 to the "E" Harness to 45J7 of the PSA using Gasket (FD770054) between connectors 56P26 and 45J7.

29. Attach "E" Harness to right hand wall using two hinged loop clamps.

30. Fasten connectors J1, J2, J3 and J4 of "D" Harness to the connector bracket (2900935) on the rear of the G & N Holding Fixture Cradle Assembly using hardware on the bracket. Connect 56I 17 of the "D" Harness to connector GN F J2, on the back wall of the Cradle Assembly using Gasket (FD770054) between connectors 56P17 and GN F J2.

NOTE: Do not fasten hinged loop clamp on branch to P29 at this time.

PIPA ELECTRONICS ASSEMBLY INSTALLATION

31. Mount PIPA Electronics Assembly to coldplate on left wall of Mounting Fixture Cradle assembly with captive hardware on coldplate. Torque screws to 20-25 inch-pounds.

32. Connect 56P12 of the "C" Harness to 35A2J14 of the PIPA Electronics Assembly.

COOLANT LINE INSTALLATION

33. Place the IMU Coolant Inlet line (Circuit 1 Supply) through the left hand cutout in the back wall of the Cradle Assembly and position for connection to IMU. (See Figure 2.)

34. Fasten coolant line to the inner back wall with two hinged loop clamps (1010400-11) and underneath the Cradle Assembly on the left with one hinged loop clamp (1010400-11).

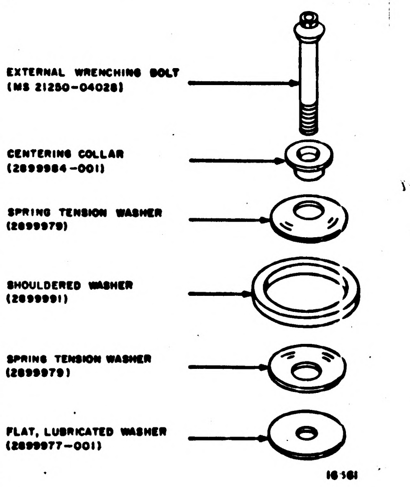

Figure 2. Mounting Hardware

35. Place the IMU Outlet-PEA Input Coolant line (Approximately 4 foot hose) through the cutout in the left hand rear wall of the Cradle Assembly and position for connection to the IMU. Fasten the coolant line to the inner left hand wall with one hinged loop clamp (1010400-11).

36. Connect the PEA Inlet coolant line to the inlet valve on the PEA coldplate.

37. Connect the PEA Outlet coolant line (Circuit 1 Return) to the outlet valve on the PEA.

38. Fasten the Inlet and Outlet lines of the PEA to the outer back wall of the Cradle Assembly with one hinged loop clamp (1010400-11).

DATE ______

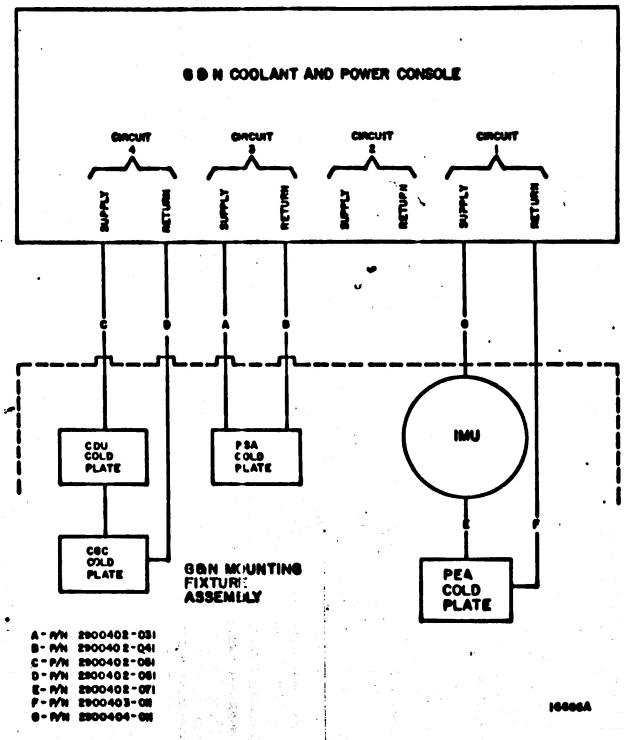

Figure 2.

DATE ______

39. Route the PSA Coolant Inlet line (Circuit 3 Supply) under the lower left side of the Cradle Assembly, across the back of the Cradle Assembly, through the inner right side and connect to the PSA coldplate inlet valve.

40. Fasten the coolant line to the back of the Cradle Assembly with two hinged loop clamps (1010400-1).

41. Fasten the coolant line to the right wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

42. Route the PSA coolant Outlet line (Circuit 3 Return), from the front, under the lower left side of the Cradle Assembly, through the left rear opening, out to the front of the PSA coldplate and connect to the PSA coldplate outlet valve.

43. Fasten the coolant line to the left wall of the Cradle Assembly with two hinged loop clamps (1010400-1).

44. Route the CDU/AGC coolant outlet line (Circuit 4 Return) from the front under the left side of the Cradle Assembly and connect to the outlet valve on the CGC coldplate.

45. Connect the CDU/AGC coolant jumper from the CGC Inlet valve to the CDU Outlet valve.

46. Route the CDU/AGC Inlet coolant line (Circuit 4 Supply) from the front under the left side of the Cradle Assembly and connect to the inlet valve on the CDU coldplate.

47. Fasten the CDU/AGC coolant Outlet, IMU/PEA coolant Outlet, PSA coolant Outlet, and CDU/AGC coolant Inlet lines to the left lower side of the Cradle Assembly with the Retaining Strap (1897193-001).

NAV BASE MOUNT INSTALLATION

48. Install the upper right base line Mounting Assembly (2899987-011) to right wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

49. Install upper left Nav Base Fixed Mounting Assembly (2899986-011) to left wall of Mounting Fixture Cradle with four hex-head cap screws (MS35308-332) and flat washers (AN960C516L). Torque to 120-140 inch-pounds.

INSTALLATION OF NAV DSKY

50. Position Nav DSKY and holding fixture in cutout on right hand side of cradle front panel assembly and attach with four captive screws. Torque screws finger tight.

51. Connect J25 of "H" Harness to DSKY connector and connect ground strap.

INSTALLATION OF NAV BASE

52. Set the G & N Fixture cradle against its 90° mechanical stop.

NOTE: Insure that the IMU and Optics mounting surfaces on the Nav Base are clean and free of burrs after removing protective pads.

53. Install the Nav Base Assembly to the

DATE ______

G & N Mounting Fixture taking care to avoid interference with the cable harnesses.

54. Install the Nav Base Plane Mounting Assembly (2899988-011) to lower rear Nav Base with Internal Wrenching bolts (1010727-003) and flat washers (1897006-053). Torque to 65-75 inch-pounds.

55. Install four hex-head cap screws (MS16996-23) and flat washers (AN960C416) to the Rear Mount Assembly and torque to 65-75 inch-pounds.

56. Install all four Internal Wrenching bolts (1010727-1) to the right hand and left hand Mount Assemblies and torque to 150-170 inch-pounds.

INSTALLATION OF IMU

57. Rotate G & N Cradle Assembly until the IMU mounting pads are horizontal. Insure that the Portable Temperature Controller is attached to the IMU and is operating properly. Insure that the extension cable is coiled neatly, with no tangles so that it can be played out smoothly. Allow the IMU outer shell to cool to ambient temperature for 1 hour before installing in the G & N Mounting Fixture.

58. Attach three eye bolts to the IMU. Attach the sling to the three eye bolts on the IMU.

59. Carefully hoist the IMU to a convenient level and remove protective mounting pads from the IMU.

60. Remove protective mounting pads from the Nav Base IMU mounting surfaces.

NOTE: Thoroughly examine the IMU and Nav Base mounting surfaces to insure that they are clean and free from burrs.

61. Remove the Snap-On Bellows from IMU.

62. Position the IMU above the Nav Base.

63. Transfer and lower the IMU into position so that the IMU mounting pads are approximately aligned with the Nav Base mounting pads.

64. Rotate the IMU until the IMU mounting pads are aligned with their respective Nav Base mounting pads. The IMU nameplate shall be positioned between the lower left and lower right mounting pads on the Nav Base (Facing the bottom of the Cradle Assembly).

65. Lower the IMU slowly insuring that the IMU mounting pads are aligned with the Nav Base mounting pads.

66. Insert Plug Gages (FA760330) through the upper and lower left IMU flange mounting holes and into the Nav Base mounting holes. Remove sling from IMU.

67. Place a light film of grease on the mounting bolt threads. Wipe off all but a thin film with a lint free cloth.

68. Leave Plug Gages in place and insert mounting bolts in upper and lower right mounting flange holes. Torque finger tight.

DATE ______

69. Remove Plug Gage from the lower left mounting flange hole and insert mounting bolt. Torque finger tight.

70. Remove Plug Gage from upper left mounting flange hole and insert mounting bolt. Torque finger tight.

71. Tighten the bolts to 30 inch-pounds and back off 1/4 turn.

72. Set the Tilt Axis of the G & N Mounting Fixture to approximately 32.5°.

73. Torque the four IMU bolts to 60-65 inch-pounds in 10 inch-pound increments in the following sequence: Torque the bolt in the hole in the upper left hand side, the bolt in the lower left, the bolt in the upper right and the bolt in the lower right.

74. Fasten connector 56P15 of the "C" Harness to J2 on the IMU.

NOTE: The following two steps must be accomplished within 15 minutes of each other.

75. Set the PTC power switch to OFF and disconnect PTC connector from J1 of the IMU and connect Cable W120 connector P2 to 45J2 on the PSA and connector P1 to J19 on the OIA.

76. Connect 56P16 of the "C" Harness to J1 of the IMU.

77. Set the Circuit Breakers on the rear of the OIA to ON.

78. Observe that the AUX HTR PWR lamp on the Temperature Monitor Control panel is lighted.

INSTALLATION OF OPTICS ASSEMBLY

NOTE: Insure that the Optics Mounting Surfaces on the Nav Base and the three precision balls are clean and free of burrs.

79. Place the three precision balls (NA1899967-001) in the three seats on the Nav Base Assembly with the holes in the precision balls vertical.

80. Carefully install the Optics Assembly on the Nav Base.

81. Secure the Optics Assembly to the Nav Base using the hardware indicated in Figure 2. Tighten, in numerical sequence, to 27 (±3) inch-pounds in approximately 10 inch-pound increments.

82. Connect 56P33 of the "F" Harness and 56P3 of the "B" Harness to the Optics Assembly. Connect 56P14 of the "B" Harness to 65A1J2 of the Optics Resolver Trim Module.

INSTALLATION OF OPTICS SHROUD ASSEMBLY AND OPTICS EYEPIECES

83. Obtain Optics Shroud Assembly and install on G & N Mounting Fixture. Torque six hex-head cap screws (MS16996-13) to 20-25 inch-pounds.

84. Obtain Optics eyepieces and install on Sextant and Telescope. Tighten both eyepieces finger tight.

INSTALLATION OF THE G & N INDICATOR CONTROL PANEL

85. Position the Indicator Control panel

DATE ________

---

near its mounting surface on the G & N Mounting Fixture. Reach over the panel and mate connector 56P24 to connector 50J1.

86. Mount the G & N Indicator Control panel with six hex-head cap screws (MS16996-13). Torque the screws to 20-25 inch-pounds.

MAIN PANEL DSKY INSTALLATION

87. Position the MAIN DSKY and Holding Fixture in the Stand and attach with four captive screws. Torque screws finger tight. Connect ground straps.

IMPORTANT Performance of JDC 12201 required before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL Battery Operated Volt-Ohmmeter or Wheatstone Bridge

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power connectors 56P30 and 56P31 are disconnected from power sources.

REFERENCES

IMPORTANT Performance of JDC 12201 required before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL Battery Operated Volt-Ohmmeter or Wheatstone Bridge

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power connectors 56P30 and 56P31 are disconnected from power sources.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

REFERENCES

IMPORTANT Performance of JDC 12201 required before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL Battery Operated Volt-Ohmmeter or Wheatstone Bridge

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power connectors 56P30 and 56P31 are disconnected from power sources.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

IMPORTANT Performance of JDC 12201 required before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL Wheatstone Bridge or equivalent and Battery Operated Voltohmmeter

NOTE: Use Wheatstone Bridge, or equivalent, for resistance measurements less than 500 ohms.

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power connectors 56P30 and 56P31 are disconnected from power sources.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

NOTE: Connection of cable W226 between the buffer assembly and the CGC test connector is necessary only when performing JDC's which specify this connection. In JDC's which do not specify connection of P1 of cable W226 to the CGC test connector, insure that connector assembly (2003099) is installed on the CGC test connector.

IMPORTANT Performance of JDC 12201 required before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL Battery Operated Volt-Ohmmeter or Wheatstone Bridge

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power connectors 56P30 and 56P31 are disconnected from power sources.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Press the OIA ON/ISS POWER DISABLED pushbutton on the Test Control Panel.

2. Insure that the BLOCK II and G/N TEST CONFIG pushbuttons on the Monitor panel are lighted.

NOTE: The coolant supply LOW FLOW indicators and the circuit 1 HIGH TEMP indicator may flash during steps 3 and 4. The COOLANT SUPPLY FAIL indicator on the Monitor Panel may flash and the alarm bell may ring. Press the PUSH TO INHIB ALARM pushbutton on Monitor Panel to inhibit the alarm.

3. Set the MAIN POWER switch on the G & N Coolant and Power Console to ON.

4. Set the COOLANT PUMP switches on the rear of the G & N Coolant and Power Console as listed in Table 1.

5. Determine FLOW indicator readings (centimeters) as a function of SUPPLY TEMP from the coolant supply CALIBRATION CHART to obtain flow rates listed in Table 1.

6. Adjust the TEMP CONT to obtain temperatures listed in Table 1 and as indicated on the SUPPLY TEMP meter on the Coolant Supply panel.

7. Allow 15 minutes for initial cooling then readjust the FLOW CONT and TEMP [illegible] to null the temperature [illegible] GSE Distribution

Circuit No.	Inlet Temperature	Flow Rate	Pump Switch
1. IMU	40 (±3) °F	33 (±3) lbs/hr	ON
2. Jumpered			OFF
3. PSA	60 (±5) °F	120 (±10) lbs/hr	ON
4. CDU	60 (±5) °F	180 (±10) lbs/hr	ON

Table 1

NOTE: The IMU nulls at 45° F on the GSE Distribution Box meter. The PEA, PSA and CDU coldplates null at 72° F and the CGC coldplate nulls at 85° F. If the coldplate sensors are not connected, the meter will indicate off scale on the low side and cannot be nulled.

7. Allow 15 minutes for initial cooling then readjust the FLOW CONT and TEMP CONT as necessary to null the temperature sensor indicators on the GSE Distribution Box to within +0, -5° F of the null point for the PSA and CDU and within ±3° F of the null point for the IMU. Record the temperature deviations from null of all components including the CGC and PEA.

8. Allow 30 minutes for GSE to warm up and the coolant temperature to stabilize.

9. Measure and record the following voltages on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated.

SIGNAL	CROSSBAR CONTROL
a. 115V, 60 cps GSE ØA	279
b. 115V, 60 cps GSE ØB	180
c. 115V, 60 cps GSE ØC	280
d. 27 VDC GSE Relay Power	179
e. 28 VDC G & N	171
f. +30 VDC GSE Power	170
g. -30 VDC Power 270	270
h. 115V, 400 cps A/B	177

10. Record the null deviations of all components at the end of the 30 minute stabilizing time. Record Circuit No. 1 flow.

11. Set switches on Computer Test Set as follows:

SWITCH	POSITION
a. Power Control panel -	
All switches	OFF
Range Select	1000V
ACVM range switch	500V

IMPORTANT Inertial Component scale factor change may result if this procedure is not strictly adhered to.

INTERVAL

TOOLS AND MATERIAL

A. GENERAL G & N TURNON PROCEDURE

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

NOTE: If the System has been OFF (not Standby and AGC power) for 2 or more hours, allow 2 hours before proceeding to step A.5. If the G & N System has been OFF for less than 2 hours, allow an equal time period before proceeding to step A.5.

4. Insure that the STBY Condition lamp on the DSKY is not lighted. If it is, press and hold the STBY pushbutton until the lamp goes out.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB GENERAL TURNON AND TURNOFF PROCEDURES FOR THE G & N SYSTEM

JDC 12204 REV A PAGE 2 OF 3

SUBSYSTEM G & N SYSTEM

5. Insure that the PROCEED portion of the PROCEED/ISS OPERATE pushbutton is lighted and the Standby requirements have been met.

6. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel.

7. 90 seconds after performing step A.6 press the OPTICS POWER ON pushbutton. The pushbutton shall light.

8. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220 to measure the G & N 28 vdc on the DVM.

9. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

B. GENERAL G & N SYSTEM - OIA DOWN MODING FROM ISS OPERATE AND ANY G & N MODE

1. Adjust the G & N Mounting Fixture to a 32.5° position.

2. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 40	NOUN 20	ENTR
c.	VERB 41	NOUN 20	ENTR
d.	+00000		ENTR
e.	+00000		ENTR
f.	+09000		ENTR
g.	Wait 60 seconds		

3. Press the OPTICS POWER ON pushbutton on the Test Control panel. The pushbutton shall go out.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED portion shall go out and the ISS STANDBY portion shall light.

NOTE: If a lower mode than ISS Standby is desired, proceed.

5. Press the OIA ON/ISS POWER DISABLED pushbutton.

6. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons. The pushbuttons shall go out.

NOTE: If a lower mode than OIA ON is desired, proceed.

7. Press the POWER OFF pushbutton on the Test Control panel of the OIA or on the Emergency Shut Down panel of the Coolant Console. The OIA PILOT POWER lamp on the Test Control panel shall light. The AUX HTR PWR lamp on the Temperature Monitor Control panel shall light. Record the time off in the system log.

NOTE: If shut down of the test station is desired, proceed to step B.8.

8. Set the Main Power switch on the G & N Coolant and Power Console to OFF.

9. Set the TEST SET POWER and STATION POWER switches on the CTS to the OFF position.

DATE 30 JUN 66

JOB GENERAL TURNON AND TURNOFF PROCEDURES FOR THE G & N SYSTEM

JDC 12204 REV A PAGE 3 OF 3

SUBSYSTEM G & N SYSTEM

ASSY

NOTE: Steps 10 through 13 determine the time of day at which the high order scaler, Channel 3, will overflow. Do not enter the PIPA and IRIG Tests (JDC 12206), the PIPA Scale Factor Tests (JDC 12217), or the PIPA Misalignment Tests (JDC 12218) within 0.2 hours of that time. If the high order scaler were to overflow during the performance of such tests, erroneous test results would occur. The high order scaler will overflow every 23.3 hours. If testing continues for more than one day without system turnoff, determine the time of scaler overflow for each day of testing.

10. Perform the following DSKY operations:

VERB 01	NOUN 10	ENTR
00003		ENTR

Record the indication of Row 1 and the time of day.

11. Perform the following DSKY operations:

VERB 21	NOUN 01	ENTR
01300		ENTR
Row 1 indication from step 10		ENTR

12. Perform the following DSKY operations:

VERB 06	NOUN 02	ENTR
01300		ENTR

Record the indication of Row 1.

13. Perform the calculations on the calculation sheet.

INTERVAL

TOOLS AND MATERIAL

A. GENERAL G & N TURNON PROCEDURE

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

NOTE: Allow 2 hours to elapse before proceeding to step A.5. with the following exceptions:

a. If the G & N system has been in the power off state for less than five days with the gimbals in the parked position (Inner and Outer gimbal at 0° and Middle gimbal at 90° with IMU mounting fixture set at 32.5°) and the system has not been moved, allow

INTERVAL

TOOLS AND MATERIAL

A. GENERAL G & N TURNON PROCEDURE

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

NOTE: Allow 2 hours to elapse before proceeding to step A.5. with the following exceptions:

a. If the G & N system has been in the power off state for less than five days with the gimbals in the parked position (Inner and Outer gimbal at 0° and Middle gimbal at 90° with IMU mounting fixture set at 32.5°) and the system has not been moved, allow 90 seconds to elapse before proceeding.

b. If the G & N system has been in power off state for less than 15 minutes with the gimbals in the unparked position, allow 90 seconds to elapse before proceeding.

c. If the G & N system has been in power off state with gimbals in the unparked position for more than 15 minutes but less than 2 hours, allow a warmup time equal to the time off to elapse before proceeding.

INTERVAL

TOOLS AND MATERIAL

A. GENERAL G & N TURNON PROCEDURE

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

NOTE: Allow 2 hours to elapse before proceeding to step A.5. with the following exceptions:

a. If the G & N system has been in the power off state for less than five days with the gimbals in the parked position (Inner and Outer gimbal at 0° and Middle gimbal at 90° with IMU mounting fixture set at 32.5°) and the system has not been moved, allow

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB GENERAL TURNON AND TURNOFF PROCEDURES FOR THE G & N SYSTEM | JDC 12204 REV H PAGE 2 OF 4

SUBSYSTEM G & N SYSTEM | ASSY

90 seconds to elapse before proceeding.

b. If the G & N system has been in power off state for less than 15 minutes with the gimbals in the unparked position, allow 90 seconds to elapse before proceeding.

c. If the G & N system has been in power off state with gimbals in the unparked position for more than 15 minutes but less than 2 hours, allow a warmup time equal to the time off to elapse before

4. Insure STBY indicator on DSKY is not lighted. If it is, press and hold PRO (or STBY) pushbutton until STBY indicator goes out. Press RSET pushbutton.

5. Press the ALARM RESET pushbutton on the Programmer and Monitor panel of the CTS.

6. Insure that the PROCEED portion of the PROCEED/ISS OPERATE pushbutton is lighted and the Standby requirements have been met.

7. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel.

8. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220 to measure the G & N 28 vdc on the DVM.

9. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

NOTE: Steps 10 through 13 determine the time of day at which the high order scaler, Channel 3, will overflow. Do not enter the PIPA and IRIG Tests (JDC 12206), the PIPA Scale Factor Tests (JDC 12217), or the PIPA Misalignment Tests (JDC 12218) within 0.2 hours of that time. If the high order scaler were to overflow during the performance of such tests, erroneous test results would occur. The high order scaler will overflow every 23.3 hours. If testing continues for more than one day without system turnoff, determine the time of scaler overflow for each day of testing.

10. Perform the following DSKY operations:

VERB 01	NOUN 10	ENTR
00003		ENTR

Record the indication of Row 1 and the time of day.

TOOLS AND MATERIAL

NOTE: Insure that connector assembly (2003099) is removed and cable W226 is connected to the CGC test connector if required by JDC's to be performed.

A. GENERAL G & N TURNON PROCEDURE

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

NOTE: Allow 2 hours to elapse before proceeding to step A.5. with the following exceptions:

a. If the IMU OPERATE power has been applied to

---

the G & N system through normal JDC procedures and the IMU gimbals have been positioned such that the PIPA and IRIG output axes are horizontal ±1° not in excess of twelve days or the IMU gimbals have been positioned such that the output axes are horizontal ±5° not in excess of five days, and the IMU gimbals have not been moved since parking, CGC power shall be applied with the IMU standby power for a minimum of fifteen minutes.

b. If the G & N system has been in power off state for less than 15 minutes with the gimbals in the unparked position, allow 90 seconds to elapse before proceeding.

c. If the G & N system has been in power off state with gimbals in the unparked position for more than 15 minutes but less than 2 hours, allow a warmup time equal to the time off to elapse before proceeding.

4. If STBY condition lamp on DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in the System log the number of times pressed. Press RSET pushbutton.

5. Press the ALARM RESET pushbutton on the Programmer and Monitor panel of the CTS.

6. Insure that the PROCEED portion of the PROCEED/ISS OPERATE pushbutton is lighted and the Standby requirements have been met.

7. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel.

8. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220 to measure the G & N 28 vdc on the DVM.

9. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

NOTE: Steps 10 through 13 determine the time of day at which the high order scaler, Channel 3, will overflow. Do not enter the PIPA and IRIG Tests (JDC 12206), the PIPA Scale Factor Tests (JDC 12217), or the PIPA Misalignment Tests (JDC 12218) within 0.2 hours of that time. If the high order scaler were to overflow during the performance of such tests,

---

erroneous test results would occur. The high order scaler will overflow every 23.3 hours. If testing continues for more than one day without system turnoff, determine the time of scaler overflow for each day of testing.

10. Perform the following DSKY operations:

VERB 01 NOUN 10 ENTR

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

NOTE: Allow 2 hours to elapse before proceeding to step A.5. with the following exceptions:

a. If the IMU OPERATE power has been applied to

VERIFICATION WITH SIDL REQUIRED BEFORE USE

the G & N system through normal JDC procedures and the IMU gimbals have been positioned such that the PIPA and IRIG output axes are horizontal ±1° not in excess of twelve days or the IMU gimbals have been positioned such that the output axes are horizontal ±5° not in excess of five days, and the IMU gimbals have not been moved since parking, CGC power shall be applied with the IMU standby power for a minimum of fifteen minutes.

b. If the G & N system has been in power off state for less than 15 minutes with the gimbals in the unparked position, allow 90 seconds to elapse before proceeding.

c. If the G & N system has been in power off state with gimbals in the unparked position for more than 15 minutes but less than 2 hours, allow a warmup time equal to the time off to elapse before proceeding.

4. If STBY condition lamp on DSKY is lighted, press and hold PRO (or STBY) pushbutton until lamp goes out. If lamp does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in the System log the number of times pressed. Press RSET pushbutton.

5. Press the ALARM RESET pushbutton on the Programmer and Monitor panel of the CTS.

6. Insure that the PROCEED portion of the PROCEED/ISS OPERATE pushbutton is lighted and the Standby requirements have been met.

7. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel.

8. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220 to measure the G & N 28 vdc on the DVM.

9. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

NOTE: Steps 10 through 13 determine the time of day at which the high order scaler, Channel 3, will overflow. Do not enter the PIPA and IRIG Tests (JDC 12206), the PIPA Scale Factor Tests (JDC 12217), or the PIPA Misalignment Tests (JDC 12218) within 0.2 hours of that time. If the high order scaler were to overflow during the performance of such tests, erroneous test results would occur. The high order scaler will overflow every 23.3 hours. If testing continues for more than one day without system turnoff, determine the time of scaler overflow for each day of testing.

IMPORTANT Inertial Component scale factor change may result if this procedure is not strictly adhered to.

INTERVAL

TOOLS AND MATERIAL

A. GENERAL G & N TURNON PROCEDURE

1. Turn on the OIA, Coolant and Power Console and CTS in accordance with applicable turnon procedures.

   NOTE: Insure that all parameters are within listed tolerances.

2. Press the OIA ON/ISS POWER DISABLED and the G/N POWER A BUS pushbutton on the Test Control panel.

3. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel. After the CGC/LGC POWER ON, 400 CPS POWER ON and the PROCEED portion of the PROCEED/ISS STANDBY pushbuttons light, press the PROCEED/ISS STANDBY pushbutton. The PSA HTR PWR pushbutton on the Temperature Monitor Control panel shall light. Record the time in the system log.

   NOTE: If the System has been OFF (not Standby and AGC power) for 2 or more hours, allow 2 hours before proceeding to step A.5. If the G & N System has been OFF for less than 2 hours, allow an equal time period before proceeding to step A.5.

4. Insure that the STBY Condition lamp on the DSKY is not lighted. If it is, press and hold the STBY pushbutton until the lamp goes out.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM

ASSY

5. Insure that the PROCEED portion of the PROCEED/ISS OPERATE pushbutton is lighted and the Standby requirements have been met.

6. Press the PROCEED/ISS OPERATE pushbutton on the Test Control panel.

7. 90 seconds after performing step A.6 press the OPTICS POWER ON pushbutton. The pushbutton shall light.

8. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220 to measure the G & N 28 vdc on the DVM.

9. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.0 (±0.25) vdc.

B. GENERAL G & N SYSTEM - OIA DOWN MODING FROM ISS OPERATE AND ANY G & N MODE

1. Adjust the G & N Mounting Fixture to a 32.5° position.

2. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 40	NOUN 20	ENTR
c.	VERB 41	NOUN 20	ENTR
d.	+00000		ENTR
e.	+00000		ENTR
f.	+09000		ENTR
g.	Wait 60 seconds		

3. Press the OPTICS POWER ON pushbutton on the Test Control panel. The pushbutton shall go out.

4. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED portion shall go out and the ISS STANDBY portion shall light.

   NOTE: If a lower mode than ISS Standby is desired, proceed.

5. Press the OIA ON/ISS POWER DISABLED pushbutton.

6. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons. The pushbuttons shall go out.

   NOTE: If a lower mode than OIA ON is desired, proceed.

7. Press the POWER OFF pushbutton on the Test Control panel of the OIA or on the Emergency Shut Down panel of the Coolant Console. The OIA PILOT POWER lamp on the Test Control panel shall light. The AUX HTR PWR lamp on the Temperature Monitor Control panel shall light. Record the time off in the system log.

   NOTE: If shut down of the test station is desired, proceed to step B.8.

8. Set the Main Power switch on the G & N Coolant and Power Console to OFF.

9. Set the TEST SET POWER and STATION POWER switches on the CTS to the OFF position.

REFERENCES PS 2015000

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 . ENTR

Press and hold the STBY pushbutton until the STBY lamp lights.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G and N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC
2. IRIG Standby Temperature deviation CHANNEL 4-4DC

b. Insure that the CHANNEL 3DC and CHANNEL 4 DC pushbuttons on the

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."
2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR lamp on the Temperature Monitor Control panel is lighted.

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123.

Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-6 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS. Connect the jumper cable from the AGC CLOCK (BNC) on the Systems Interface panel of the CTS to the adjacent CLOCK (BNC) on the Interface Signals patch board.

25. Connect a jumper from the remaining CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:

a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following MAIN DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RESET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 and STRT 2 switches on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTROL 1 and CONTROL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to CGC 4V and adjust the CONTROL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set the CONTROL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to CGC 14V and adjust the CONTROL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set the CONTROL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Turn on the INHIBIT COMPUTER POWER FAIL Signal.

35. Using CONTROL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTROL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTROL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTROL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTROL 1 and CONTROL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V
b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTROL 1 and CONTROL 2 switches to OFF.

JOB STANDBY CONTROL TEST | JDC 12205 REV A PAGE 5 OF 5

SUBSYSTEM G & N SYSTEM | ASSY

38. Set the STRT 1 and STRT 2 switches on the Buffer Circuit Assembly to ON.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

- a. VERB 21 NOUN 10 ENTR
- b. 00013 ENTR
- c. 00200 ENTR
- d. VERB 25 NOUN 01 ENTR
- e. 00042 ENTR
- f. 77777 ENTR
- g. 77777 ENTR
- h. 77777 ENTR
- i. VERB 15 NOUN 01 ENTR
- j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of both DSKY's.

40. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTER switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACT lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010, and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE pushbutton as indicated in step 62. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTER switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 62 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 63 and 64 except observe Row 2 of the DSKY for proper indications.

48. Set the AGC INPUT COUNTER switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 62 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 63 and 64 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

- a. VERB 21 NOUN 10 ENTR
- b. 00013 ENTR
- c. 00000 ENTR

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT lamp is lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G and N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-4DC

b. Insure that the CHANNEL 3DC and CHANNEL 4 DC pushbuttons on the

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ASSY

Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM. (3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123.

Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:

a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following MAIN DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RESET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 and STRT 2 switches on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTROL 1 and CONTROL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to CGC 4V and adjust the CONTROL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set the CONTROL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to CGC 14V and adjust the CONTROL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set the CONTROL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Turn on the INHIBIT COMPUTER POWER FAIL Signal.

35. Using CONTROL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTROL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTROL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTROL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTROL 1 and CONTROL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V
b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTROL 1 and CONTROL 2 switches to OFF.

38. Set the STRT 1 and STRT 2 switches on the Buffer Circuit Assembly to ON.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00013		ENTR
c.	00200		ENTR
d.	VERB 25	NOUN 01	ENTR
e.	00042		ENTR
f.	77777		ENTR
g.	77777		ENTR
h.	77777		ENTR
i.	VERB 15	NOUN 01	ENTR
j.	00042		ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of both DSKY's.

40. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTER switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACT lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010, and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE pushbutton as indicated in step 62. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTER switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 62 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 63 and 64 except observe Row 2 of the DSKY for proper indications.

48. Set the AGC INPUT COUNTER switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 62 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 63 and 64 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00013		ENTR
c.	00000		ENTR

TOOLS AND MATERIAL

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT lamp is lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC
2. IRIG Standby Temperature deviation CHANNEL 4-4DC

b. Insure that the CH 3 DC and CH 4 DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ASSY

pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."
2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123.

Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:

a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V
b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTRL 1 and CONTRL 2 switches to OFF.

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

40. Press the SINGLE PULSE pushbutton on the XY interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE switch as indicated in step 42. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 42 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 43 and 44 except observe Row 2 of the DSKY for proper indications.

48. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 42 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 43 and 44 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00013		ENTR
c.	00000		ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: OSCILLOGRAPH sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT lamp is lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:
   1. PIPA Standby Temperature deviation CHANNEL 3-3DC
   2. IRIG Standby Temperature deviation CHANNEL 4-4DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:
   1. CHANNEL 3 "Start of Standby PIPA Temp test."
   2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM. (3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123.

Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:

a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V
b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTRL 1 and CONTRL 2 switches to OFF.

SUBSYSTEM G & N SYSTEM | ASSY

38. Deleted.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR
f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

40. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE switch as indicated in step 42. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 42 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 43 and 44 except observe Row 2 of the DSKY for proper indications.

48. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 42 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 43 and 44 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00000 ENTR

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: OSCILLOGRAPH sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT and TEMP lamps are lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-3DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13A. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

13B. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER

DATE 30 JUN 66

VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

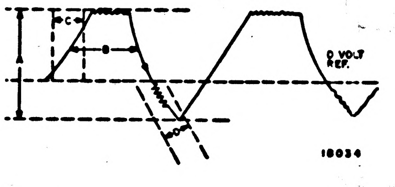
22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

DATE 30 JUN 66

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: OSCILLOGRAPH sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT and TEMP lamps are lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-3DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JDC 12205 REV E PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13A. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

13B. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER

DATE 30 JUN 66

JDC 12205 REV E PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

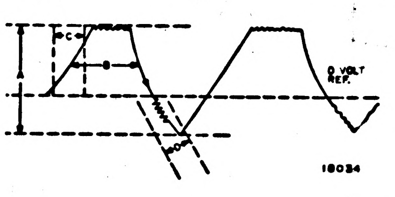
22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V

DATE 30 JUN 66

b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTRL 1 and CONTRL 2 switches to OFF.

38. Deleted.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR
f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

40. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE switch as indicated in step 42. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 42 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 43 and 44 except observe Row 2 of the DSKY for proper indications.

48. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

---

49. Repeat step 42 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 43 and 44 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00000 ENTR
d. VERB 57 ENTR
e. 00015 ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: OSCILLOGRAPH sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT and TEMP lamps are lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC
2. IRIG Standby Temperature deviation CHANNEL 4-3DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB STANDBY CONTROL TEST

JDC 12205 REV F PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM
ASSY

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."
2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13A. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

13B. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER

DATE 30 JUN 66

JOB STANDBY CONTROL TEST

JDC 12205 REV F PAGE 3 OF 6

SUBSYSTEM G & N SYSTEM
ASSY

VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

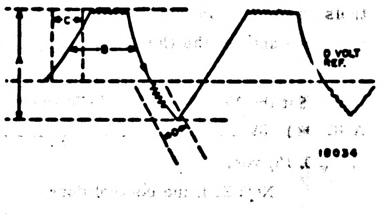
22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

DATE 30 JUN 66

ASSY

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V

DATE 30 JUN 66

b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

NOTE: Fail indications occur only with the MAIN DSKY installed for test or with cable W-160 (P3) connected to the DSKY.

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTRL 1 and CONTRL 2 switches to OFF.

38. Deleted.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR
f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

40. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE switch as indicated in step 42. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 42 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 43 and 44 except observe Row 2 of the DSKY for proper indications.

---

48. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 42 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 43 and 44 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00000 ENTR
d. VERB 57 ENTR
e. 00015 ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: OSCILLOGRAPH sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT and TEMP lamps are lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC.
2. IRIG Standby Temperature deviation CHANNEL 4-3DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."
2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13A. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

13B. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER

VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

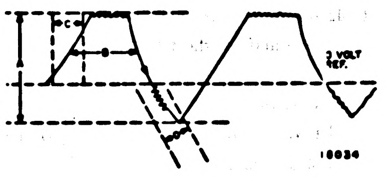
22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V

b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.6 V

NOTE: Fail indications occur only with the MAIN DSKY installed for test or with cable W-160 (P3) connected to the DSKY.

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTRL 1 and CONTRL 2 switches to OFF.

38. Deleted.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00013		ENTR
c.	00200		ENTR
d.	VERB 25	NOUN 01	ENTR
e.	00042		ENTR
f.	77777		ENTR
g.	77777		ENTR
h.	77777		ENTR
i.	VERB 15	NOUN 01	ENTR
j.	00042		ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

40. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

41. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE switch. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE switch as indicated in step 42, Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 42 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 43 and 44 except observe Row 2 of the DSKY for proper indications.

---

48. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 42 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 43 and 44 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00013		ENTR
c.	00000		ENTR
d.	VERB 57		ENTR
e.	00015		ENTR

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: OSCILLOGRAPH sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT and TEMP lamps are lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC
2. IRIG Standby Temperature deviation CHANNEL 4-3DC

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."
2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13A. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

13B. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

---

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

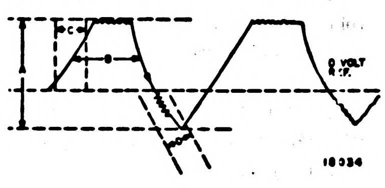
22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V

Press and hold the STBY pushbutton until the STBY lamp lights. Observe the NO ATT and TEMP lamps are lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:
   1. PIPA Standby Temperature deviation CHANNEL 3-3DC
   2. IRIG Standby Temperature deviation CHANNEL 4-3DC

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 20 mv/mm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:
   1. CHANNEL 3 "Start of Standby PIPA Temp test."
   2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13A. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

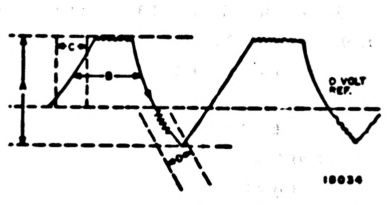
25. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

29. Perform the following DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.
b. RSET Press
c. VERB 61 ENTR
d. VERB 36 ENTR

30. Set the STRT 1 STRT 2 switch on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTRL 1 and CONTRL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to AGC (+4) +3V and adjust the CONTRL 1 for 4.0 (±0.15) vdc.

DATE 30 JUN 66

NOTE: If the control does not vary the voltage, set the CONTRL 1 switch to OFF; turn CONTRL 1 fully counterclockwise and back to midrange; set the CONTRL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to AGC (+14) +13V and adjust the CONTRL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTRL 2 switch to OFF; turn CONTRL 2 fully counterclockwise and back to midrange; set the CONTRL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM. Press INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel. The pushbutton shall light.

35. Using CONTRL 1, adjust the CGC 4 VDC supply voltage to 3.60 VDC. Using CONTRL 2, adjust the CGC 14 VDC supply to 12.6 VDC and to 16.2 VDC. Use CONTRL 1 again to adjust the 4 volt supply to 4.5 volts. Use CONTRL 2 to adjust the 14 volt supply to 12.6 VDC and then to 16.2. No computer failures shall occur.

36. Turn the INHIBIT COMPUTER POWER FAIL Signal off. Using CONTRL 1 and CONTRL 2 set the computer 4 and 14 volt supplies to the following points:

a. 3.5V and 14.0 V
b. 4.5 V and 14.0 V
c. 4.0 V and 16.5 V
d. 4.0 V and 12.2 V

NOTE: Fail indications occur only with the MAIN DSKY installed for test or with cable W-160 (P3) connected to the DSKY.

At each of points a, b, c, and d, a CGC Warning shall occur. (Other failures may occur but are to be ignored.) Return the 4 and 14 volt supplies to nominal values after each of the above steps and press the RSET button on the DSKY. All alarms shall go out within 60 seconds.

37. Set CONTRL 1 and CONTRL 2 switches to OFF.

38. Deleted.

BMAG ATTITUDE SIGNALS

39. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR

---

c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR
f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

40. Press the SINGLE PULSE switch on the XY Interface panel. The SINGLE PULSE lamp shall light.

41. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

42. Press the SINGLE PULSE pushbutton. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE pushbutton waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

43. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

44. Actuate the SINGLE PULSE pushbutton as indicated in step 42. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

45. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

46. Repeat step 42 except observe Row 2 of the DSKY for proper indications.

47. Repeat steps 43 and 44 except observe Row 2 of the DSKY for proper indications.

48. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

49. Repeat step 42 except observe Row 3 of the DSKY for proper indications.

50. Repeat steps 43 and 44 except observe Row 3 of the DSKY for proper indications.

51. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00000 ENTR
d. VERB 57 ENTR
e. 00015 ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

2. Oscillograph sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Perform the following DSKY operations:

a. VERB 66 ENTR

b. Press and hold PRO (or STBY) pushbutton until STBY indicator lights.

Observe NO ATT and TEMP indicators are lighted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-3DC

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 0.20 v/cm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

---

14. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

15. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

16. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

17. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

18. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

NOTE: Ignore step 19 if Auxiliary Calibration System is to be used.

19. Insure that the AGC Calibration System has been calibrated within the past seven days.

20. Insure that the CGC power has been on for at least two hours before proceeding.

21. Set Frequency Counter controls as follows:

FUNCTION switch to FREQ
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

22. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

23. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel.

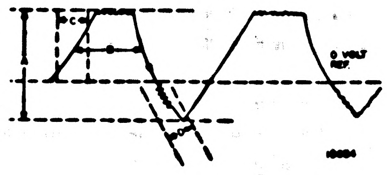
24. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directed in CPS. Count output frequency for 15 minutes and record data from the printout.

---

25. Disconnect cable W259 (2014470-011) P1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

26. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

27. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise

28. Perform the following DSKY and CTS operations:

a. Press and hold PRO (or STBY) pushbutton until STBY indicator goes out.
b. Press RSET pushbutton.
c. VERB 61 ENTR
d. VERB 36 ENTR
e. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

+4 VDC CGC POWER SUPPLY

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194. Measure and record +4 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure the noise present on 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

30. Set CROSSBAR CONTROL to 293. Measure and record +14 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure noise present on 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

31. Press to light INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

32. Set AGC VOLTAGE 1 and 2 controls on CTS Power Control panel to midrange and set CONTROL 1 and CONTROL 2 switches to ON.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set CONTROL 1 switch to ON, and then readjust.

33. Set VOLTAGE SELECT switch to AGC (+4V) +3V and adjust CONTROL 1 for 4.0 (±0.20) vdc.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set CONTROL 1 switch to ON, and then readjust.

34. Set VOLTAGE SELECT switch to AGC (+14V) +13V and adjust CONTROL 2 for 14.0 (±0.40) vdc.

35. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. 77767 ENTR

36. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194 to monitor the +14 VDC CGC Power Supply voltage on DVM.

37. Use CONTROL 1 to adjust +4 VDC CGC Power Supply voltage to 3.40 vdc. Use CONTROL 2 to adjust +14 VDC CGC Power Supply voltage to 12.1 vdc and to 16.4 vdc. Use CONTROL 1 again to adjust the 4 volt supply to 4.60 vdc. Use CONTROL 2 to adjust the 14 volt supply to 12.1 vdc and then to 16.4 vdc. No computer failures shall occur.

CGC VOLTAGE FAIL ALARM LIMITS

38. Use CONTROL 1 to set +4 VDC CGC Power Supply voltage to 4.0 (±0.20) vdc. Use CONTROL 2 to set +14 VDC CGC Power Supply voltage to 14.0 (±0.40) vdc.

39. Press to extinguish INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

NOTE: Fail indications in the step below occur only with MAIN DSKY installed for test or with cable W160 (P3) connected to the DSKY.

40. Monitor CGC/LGC WARNING NO. 1 on Monitor panel while using CONTROL 1 and CONTROL 2 to set the 4 and 14 volt supplies to the values specified in steps a through d below. At each step a CGC/LGC WARNING NO. 1 shall occur. (Other failures may also occur but are to be ignored.) Return both power supplies to nominal values after each step and press RSET pushbutton on DSKY. All alarms shall go out within 60 seconds.

a. 3.5 vdc and 14.0 vdc
b. 4.6 vdc and 14.0 vdc
c. 4.0 vdc and 16.4 vdc
d. 4.0 vdc and 12.2 vdc

41. Set CONTROL 1 and CONTROL 2 switches to OFF.

42. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. +00000 ENTR

BMAG ATTITUDE SIGNALS

43. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR

---

f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

44. Press the SINGLE PULSE switch on the XY Interface panel. The SINGLE PULSE lamp shall light.

45. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

46. Press the SINGLE PULSE pushbutton. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE pushbutton waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

47. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

48. Actuate the SINGLE PULSE pushbutton as indicated in step 46. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

49. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall to out.

50. Repeat step 46 except observe Row 2 of the DSKY for proper indications.

51. Repeat steps 47 and 48 except observe Row 2 of the DSKY for proper indications.

52. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

53. Repeat step 46 except observe Row 3 of the DSKY for proper indications.

54. Repeat steps 47 and 48 except observe Row 3 of the DSKY for proper indications.

55. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 25 NOUN 01 ENTR
c. 00042 ENTR
d. 00000 ENTR
e. 00000 ENTR
f. 00000 ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

2. Oscillograph sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light. Reset all existing alarms on CTS and DSKY.

3. Perform the following DSKY operations:

a. VERB 60 ENTR

b. Press and hold PRO (or STBY) pushbutton until STBY indicator lights. Observe NO ATT and TEMP indicators are lighted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-3DC

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 0.20 v/cm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

---

14. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

15. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

16. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

17. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

18. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

NOTE: Ignore step 19 if Auxiliary Calibration System is to be used.

19. Insure that the AGC Calibration System has been calibrated within the past seven days.

20. Insure that the CGC power has been on for at least two hours before proceeding.

21. Set Frequency Counter controls as follows:

FUNCTION switch to FREQ
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

22. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

23. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel.

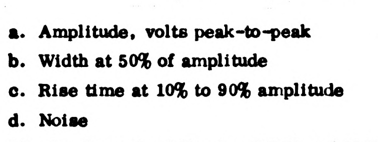
24. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directed in CPS. Count output frequency for 15 minutes and record data from the printout.

---

25. Disconnect cable W259 (2014470-011) P1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

26. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

27. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak

b. Width at 50% of amplitude

c. Rise time at 10% to 90% amplitude

d. Noise

28. Perform the following DSKY and CTS operations:

a. Press and hold PRO (or STBY) pushbutton until STBY indicator goes out.

b. Press RSET pushbutton.

c. VERB 61 ENTR

d. VERB 36 ENTR

e. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

+4 VDC CGC POWER SUPPLY

NOTE: Set DVM switch on Primary Signal Selector panel to OFF when measuring noise on Dual Beam Oscilloscope in steps 29 and 30.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194. Measure and record +4 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure the noise present on 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

30. Set CROSSBAR CONTROL to 293. Measure and record +14 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure noise present on 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

31. Press to light INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

32. Set AGC VOLTAGE 1 and 2 controls on CTS Power Control panel to midrange and set CONTROL 1 and CONTROL 2 switches to ON.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set CONTROL 1 switch to ON, and then readjust.

33. Set VOLTAGE SELECT switch to AGC (+4V) +3V and adjust CONTROL 1 for 4.0 (±0.20) vdc.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set CONTROL 2 switch to ON, and then readjust.

34. Set VOLTAGE SELECT switch to AGC (+14V) +13V and adjust CONTROL 2 for 14.0 (±0.40) vdc.

35. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. 77767 ENTR

36. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194 to monitor the +4 VDC CGC Power Supply voltage on DVM.

37. Use CONTROL 1 to adjust +4 VDC CGC Power Supply voltage to 3.40 vdc. Use CONTROL 2 to adjust +14 VDC CGC Power Supply voltage to 12.1 vdc and to 16.4 vdc. Use CONTROL 1 again to adjust the 4 volt supply to 4.60 vdc. Use CONTROL 2 to adjust the 14 volt supply to 12.1 vdc and then to 16.4 vdc. No computer failures shall occur.

CGC VOLTAGE FAIL ALARM LIMITS

38. Use CONTROL 1 to set +4 VDC CGC Power Supply voltage to 4.0 (±0.20) vdc. Use CONTROL 2 to set +14 VDC CGC Power Supply voltage to 14.0 (±0.40) vdc.

39. Press to extinguish INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

NOTE: Fail indications in the step below occur only with MAIN DSKY installed for test or with cable W160 (P3) connected to the DSKY.

40. Monitor CGC/LGC WARNING NO. 1 on Monitor panel while using CONTROL 1 and CONTROL 2 to set the 4 and 14 volt supplies to the values specified in steps a through d below. At each step a CGC/LGC WARNING NO. 1 shall occur. (Other failures may also occur but are to be ignored.) Return both power supplies to nominal values after each step and press RSET pushbutton on DSKY. All alarms shall go out within 60 seconds.

a. 3.5 vdc and 14.0 vdc
b. 4.6 vdc and 14.0 vdc
c. 4.0 vdc and 16.4 vdc
d. 4.0 vdc and 12.2 vdc

41. Set CONTROL 1 and CONTROL 2 switches to OFF.

42. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. +00000 ENTR

BMAG ATTITUDE SIGNALS

43. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR

---

f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

44. Press the SINGLE PULSE switch on the XY Interface panel. The SINGLE PULSE lamp shall light.

45. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

46. Press the SINGLE PULSE pushbutton. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE pushbutton waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

47. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

48. Actuate the SINGLE PULSE pushbutton as indicated in step 46. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

49. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall to out.

50. Repeat step 46 except observe Row 2 of the DSKY for proper indications.

51. Repeat steps 47 and 48 except observe Row 2 of the DSKY for proper indications.

52. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

53. Repeat step 46 except observe Row 3 of the DSKY for proper indications.

54. Repeat steps 47 and 48 except observe Row 3 of the DSKY for proper indications.

55. Perform the following DSKY operations:

a. VERB 36 ENTR
b. KEY REL indicator will flash; press KEY REL pushbutton.
c. VERB 25 NOUN 01 ENTR
d. 00042 ENTR
e. 00000 ENTR
f. 00000 ENTR
g. 00000 ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

2. Oscillograph sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

NOTE: If the VERB display on the DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC operate power is applied.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light. Reset all existing alarms on CTS and DSKY. AGC ALARMS lamp 6 on Logic Drawer No. 1 shall remain lighted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

3. Perform the following DSKY operations:

a. VERB 60 ENTR

b. Press and hold PRO (or STBY) pushbutton until STBY indicator lights. Observe NO ATT and TEMP indicators are lighted.

c. Verify that ALARMS lamp 6 on Logic Drawer No. 1 goes out and ALARMS lamp 4 lights.

d. Verify that GOJAM, STPIT, LINC, and INHIBIT INTERRUPT lamps on Logic Drawer No. 2 are lighted and that COMPUTER STANDBY lamp on Monitor panel is lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-3DC

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 0.20 v/cm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

---

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

14. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

15. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

16. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

17. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

18. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

NOTE: Ignore step 19 if Auxiliary Calibration System is to be used.

19. Insure that JDC 04830 has been performed within the past seven days.

20. Insure that the CGC power has been on for at least two hours before proceeding.

21. Set Frequency Counter controls as follows:

FUNCTION switch to FREQ
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

22. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

---

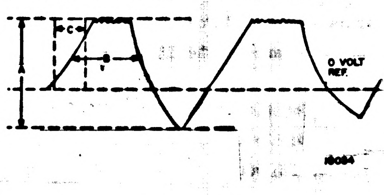
23. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel.

24. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directed in CPS. Count output frequency for 15 minutes and record data from the printout.

25. Disconnect cable W259 (2014470-011) P1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

26. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

27. Measure and record the following characteristics on the Computer Test Set Oscilloscope:



a. Amplitude, volts peak-to-peak

b. Width at 50% of amplitude

c. Rise time at 10% to 90% amplitude

d. Noise shall be defined as any nonsynchronous spikes or ripple riding on the pulse.

28. Perform the following DSKY and CTS operations:

a. Press and hold PRO (or STBY) pushbutton until STBY indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in the system log the number of times pressed.

b. Press RSET pushbutton.

c. VERB 61 ENTR

d. VERB 36 ENTR

e. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

f. Verify that ALARMS lamp 6 on Logic Drawer No. 1 lights and ALARMS lamp 4 goes out.

g. Verify that COMPUTER STANDBY lamp on Monitor panel goes out.

+4 VDC CGC POWER SUPPLY

NOTE: Set DVM switch on Primary Signal Selector panel to OFF when measuring noise on Dual Beam Oscilloscope in steps 29 and 30.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194. Measure and record +4 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure the noise present on 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

30. Set CROSSBAR CONTROL to 293. Measure and record +14 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure noise present on 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

31. Press to light INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

32. Set AGC VOLTAGE 1 and 2 controls on CTS Power Control panel to midrange and set CONTROL 1 and CONTROL 2 switches to ON.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set CONTROL 1 switch to ON, and then readjust.

33. Set VOLTAGE SELECT switch to AGC (+4V) +3V and adjust CONTROL 1 for 4.0 (±0.20) vdc.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set CONTROL 2 switch to ON, and then readjust.

34. Set VOLTAGE SELECT switch to AGC (+14V) +13V and adjust CONTROL 2 for 14.0 (±0.40) vdc.

35. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. 77767 ENTR

36. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194 to monitor the +4 VDC CGC Power Supply voltage on DVM.

37. Use CONTROL 1 to adjust +4 VDC CGC Power Supply voltage to 3.40 vdc. Use CONTROL 2 to adjust +14 VDC CGC Power Supply voltage to 12.1 vdc and to 16.4 vdc. Use CONTROL 1 again to adjust the 4 volt supply to 4.60 vdc. Use CONTROL 2 to adjust the 14 volt supply to 12.1 vdc and then to 16.4 vdc. No computer failures shall occur.

CGC VOLTAGE FAIL ALARM LIMITS

38. Use CONTROL 1 to set +4 VDC CGC Power Supply voltage to 4.0 (±0.20) vdc. Use CONTROL 2 to set +14 VDC CGC Power Supply voltage to 14.0 (±0.40) vdc.

39. Press to extinguish INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

NOTE: Fail indications in the step below occur only with MAIN DSKY installed for test or with cable W160 (P3) connected to the DSKY.

40. Monitor CGC/LGC WARNING NO. 1 on Monitor panel while using CONTROL 1 and CONTROL 2 to set the 4 and 14 volt supplies to the values specified in steps a through d below. At each step a CGC/LGC WARNING NO. 1 shall occur. (Other failures may also occur but are to be ignored.) Return both power supplies to nominal values after each step and press RSET pushbutton on DSKY. All alarms shall go out within 60 seconds.

a. 3.5 vdc and 14.0 vdc
b. 4.6 vdc and 14.0 vdc
c. 4.0 vdc and 16.4 vdc
d. 4.0 vdc and 12.2 vdc

40A. Monitor CGC/LGC WARNING NO. 1 lamp on the Monitor panel while using CONTROL 1 and CONTROL 2 to set the 4 and 14 volt supplies to the values specified below. No computer failures shall occur:

a. 4.0 vdc and 15.6 vdc
b. 4.0 vdc and 12.8 vdc
c. 3.8 vdc and 14.0 vdc
d. 4.2 vdc and 14.0 vdc

41. Set CONTROL 1 and CONTROL 2 switches to OFF.

42. Perform the following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. +00000 ENTR

BMAG ATTITUDE SIGNALS

43. Perform the following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR
f. 77777 ENTR
g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

44. Press the SINGLE PULSE switch on the XY Interface panel. The SINGLE PULSE lamp shall light.

45. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

46. Press the SINGLE PULSE pushbutton. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE pushbutton waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

47. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

---

48. Actuate the SINGLE PULSE pushbutton as indicated in step 46. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

49. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall to out.

50. Repeat step 46 except observe Row 2 of the DSKY for proper indications.

51. Repeat steps 47 and 48 except observe Row 2 of the DSKY for proper indications.

52. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

53. Repeat step 46 except observe Row 3 of the DSKY for proper indications.

54. Repeat steps 47 and 48 except observe Row 3 of the DSKY for proper indications.

55. Perform the following DSKY operations:

a. VERB 36 ENTR
b. KEY REL indicator will flash; press KEY REL pushbutton.
c. VERB 25 NOUN 01 ENTR
d. 00042 ENTR
e. 00000 ENTR
f. 00000 ENTR
g. 00000 ENTR

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

2. Oscillograph sensitivities in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

PROCEDURE

NOTE: If the VERB display on the DSKY contains a number from 11 through 17, the KEY REL indicator may flash when DSKY entries are made.

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC operate power is applied.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light. Reset all existing alarms on CTS and DSKY. AGC ALARMS lamp 6 on Logic Drawer No. 1 shall remain lighted.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

3. Perform the following DSKY operations:

a. VERB 60 ENTR

b. Press and hold PRO (or STBY) pushbutton until STBY indicator lights. Observe NO ATT and TEMP indicators are lighted. Press ALARM RESET pushbutton on Programmer and Monitor panel.

c. Verify that ALARMS lamp 6 on Logic Drawer No. 1 goes out and ALARMS lamp 4 lights.

d. Verify that GOJAM, STPIT, LINC, and INHIBIT INTERRUPT lamps on Logic Drawer No. 2 are lighted and that COMPUTER STANDBY lamp on Monitor panel is lighted.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 171. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

6. Set up the oscillograph as follows:

a. Set CHANNELS 3 and 4 of the Oscillograph Signal Selector panel to monitor the following signals:

1. PIPA Standby Temperature deviation CHANNEL 3-3DC

2. IRIG Standby Temperature deviation CHANNEL 4-8DC

b. Insure that the CH 3DC and CH 4DC pushbuttons on the Oscillograph Signal Selector panel are lighted.

c. Zero and calibrate CHANNEL 3 and 4 on the Oscillograph Amplifier setting the CHART SPEED to 1 and Range to 0.20 v/cm on the Oscillograph controls for CHANNELS 3 and 4.

d. Mark the Oscillograph channels as follows:

1. CHANNEL 3 "Start of Standby PIPA Temp test."

2. CHANNEL 4 "Start of Standby IRIG Temp test."

7. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

8. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light. Immediately press the EVENT MARKER on the Oscillograph Control panel.

9. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

TEMPERATURE CONTROL

10. Observe the Monitor Panel to confirm that the ERROR DETECT indicator and ALARM INHIBIT pushbuttons are not lighted. Observe the Temperature Monitor Control panel to confirm that the failure lights are not lighted.

11. After one hour has elapsed since performing step 8, press the EVENT MARKER on the Oscillograph Control panel and stop the Oscillograph.

12. Determine from the Oscillograph Chart and by use of the calculation sheet, the mean temperature of the IRIG's and PIPA's during the one hour period and record the results. Calculate and record the differences between the mean IRIG and PIPA Temperatures.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 172. Adjust the G&N POWER ADJUST on the Test Control panel until the DVM indicates 28.8 (±1.0) VDC. Record indication.

14. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

(3200 SUSPENSION POWER)

15. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5
DISPLAY RESET to ZERO
CLOCK FREQUENCY DIVIDER to 10
CLOCK SELECTOR to INT
FUNCTION to OFF
INPUT SELECTOR to C SENSE
SENSE SELECTOR to FWD
TRIGGER VOLTAGE ATTN D to 10
TRIGGER VOLTAGE to fully counterclockwise
SAMPLE TIME (N_1) to 032000
FUNCTION to RATIO OR PERIOD

16. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

17. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The counter shall indicate approximately 100000. Record the Counter indication.

18. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123. Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

NOTE: Ignore step 19 if Auxiliary Calibration System is to be used.

19. Insure that JDC 04830 has been performed within the past seven days.

20. Insure that the CGC power has been on for at least two hours before proceeding.

21. Set Frequency Counter controls as follows:

FUNCTION switch to FREQ
INPUT VOLTS RMS switch to 6.4
SLOPE switch to +
GATE switch to OPEN
TRIGGER LEVEL switch to CENTER

22. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

23. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel.

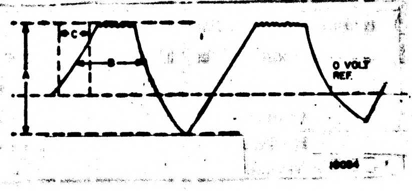
24. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directed in CPS. Count output frequency for 15 minutes and record data from the printout.

25. Disconnect cable W259 (2014470-011) P1 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS.

26. Connect a jumper from the CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS. Insure that no other jumpers are connected to the CLOCK connectors.

27. Measure and record the following characteristics on the Computer Test Set Oscilloscope:

a. Amplitude, volts peak-to-peak
b. Width at 50% of amplitude
c. Rise time at 10% to 90% amplitude
d. Noise shall be defined as any nonsynchronous spikes or ripple riding on the pulse.



28. Perform the following DSKY and CTS operations:

a. Press and hold PRO (or STBY) pushbutton until STBY indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in the system log the number of times pressed.

b. Press RSET pushbutton.

c. VERB 61 ENTR

d. VERB 36 ENTR

e. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

f. Verify that ALARMS lamp 6 on Logic Drawer No. 1 lights and ALARMS lamp 4 goes out.

g. Verify that COMPUTER STANDBY lamp on Monitor panel goes out.

+4 VDC CGC POWER SUPPLY

NOTE: Set DVM switch on Primary Signal Selector panel to OFF when measuring noise on Dual Beam Oscilloscope in steps 29 and 30.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194. Measure and record +4 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure the noise present on 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

30. Set CROSSBAR CONTROL to 293. Measure and record +14 VDC CGC Power Supply voltage indicated on DVM. Use Dual Beam Oscilloscope to measure noise present on 14 volt supply voltage. Record indication.

CGC VOLTAGE MARGIN TEST

31. Press to light INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

32. Set AGC VOLTAGE 1 and 2 controls on CTS Power Control panel to midrange and set CONTROL 1 and CONTROL 2 switches to ON.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set CONTROL 1 switch to ON, and then readjust.

33. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194 to monitor +4 VDC CGC power supply voltage on DVM. Adjust CONTROL 1 on Power Control panel until DVM indicates 4.0 (±0.20) vdc.

NOTE: If the control does not vary the voltage in the next step, set CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set CONTROL 2 switch to ON, and then readjust.

34. Set CROSSBAR CONTROL on Primary Signal Selector panel to 293 to monitor +14 VDC CGC power supply voltage on DVM. Adjust CONTROL 2 on Power Control panel until DVM indicates 14.0 (±0.40) vdc.

35. Perform the following DSKY operations:

a. VERB 21	NOUN 27	ENTR
b. 77767		ENTR

36. Set CROSSBAR CONTROL on Primary Signal Selector panel to 194 to monitor the +4 VDC CGC Power Supply voltage on DVM.

NOTE: During performance of steps 37 through 40A, set CROSSBAR CONTROL on Primary Signal Selector panel to 194 to monitor the +4 VDC CGC power supply voltage on the DVM, and set CROSSBAR CONTROL to 293 to monitor the +14 VDC CGC power supply voltage on the DVM.

37. Use CONTROL 1 to adjust +4 VDC CGC Power Supply voltage to 3.40 vdc. Use CONTROL 2 to adjust +14 VDC CGC Power Supply voltage to 12.1 vdc and to 16.4 vdc. Use CONTROL 1 again to adjust the 4 volt supply to 4.60 vdc. Use CONTROL 2 to adjust the 14 volt supply to 12.1 vdc and then to 16.4 vdc. No computer failures shall occur.

CGC VOLTAGE FAIL ALARM LIMITS

38. Use CONTROL 1 to set +4 VDC CGC Power Supply voltage to 4.0 (±0.20) vdc. Use CONTROL 2 to set +14 VDC CGC Power Supply voltage to 14.0 (±0.40) vdc.

39. Press to extinguish INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

NOTE: Fail indications in the step below occur only with MAIN DSKY installed for test or with cable W160 (P3) connected to the DSKY.

40. Monitor CGC/LGC WARNING NO. 1 on Monitor panel while using CONTROL 1 and CONTROL 2 to set the 4 and 14 volt supplies to the values specified in steps a through d below. At each step a CGC/LGC WARNING NO. 1 shall occur. (Other failures may also occur but are to be ignored.) Return both power supplies to nominal values after each step and press RSET pushbutton on DSKY. All alarms shall go out within 60 seconds.

a. 3.5 vdc and 14.0 vdc
b. 4.6 vdc and 14.0 vdc
c. 4.0 vdc and 16.4 vdc
d. 4.0 vdc and 12.2 vdc

40A. Monitor CGC/LGC WARNING NO. 1 lamp on the Monitor panel while using CONTROL 1 and CONTROL 2 to set the 4 and 14 volt supplies to the values specified below. No computer failures shall occur:

a. 4.0 vdc and 15.6 vdc
b. 4.0 vdc and 12.8 vdc
c. 3.8 vdc and 14.0 vdc
d. 4.2 vdc and 14.0 vdc

41. Set CONTROL 1 and CONTROL 2 switches to OFF.

42. Perform the following DSKY operations:

a. VERB 21	NOUN 27	ENTR
b. +00000		ENTR

BMAG ATTITUDE SIGNALS

43. Perform the following DSKY operations:

a. VERB 21	NOUN 10	ENTR
b. 00013		ENTR
c. 00200		ENTR
d. VERB 25	NOUN 01	ENTR
e. 00042		ENTR
f. 77777		ENTR
g. 77777		ENTR
h. 77777		ENTR
i. VERB 15	NOUN 01	ENTR
j. 00042		ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of DSKY.

44. Press the SINGLE PULSE switch on the XY Interface panel. The SINGLE PULSE lamp shall light.

45. Set the AGC INPUT COUNTERS switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

46. Press the SINGLE PULSE pushbutton. After the COMP ACTY light on DSKY flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE pushbutton waiting until the COMP ACTY lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

47. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

48. Actuate the SINGLE PULSE pushbutton as indicated in step 46. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

49. Set the AGC INPUT COUNTERS switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

50. Repeat step 46 except observe Row 2 of the DSKY for proper indications.

51. Repeat steps 47 and 48 except observe Row 2 of the DSKY for proper indications.

52. Set the AGC INPUT COUNTERS switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

53. Repeat step 46 except observe Row 3 of the DSKY for proper indications.

54. Repeat steps 47 and 48 except observe Row 3 of the DSKY for proper indications.

55. Perform the following DSKY operations:

a. VERB 36 ENTR

b. KEY REL indicator will flash; press KEY REL pushbutton.

c. VERB 25	NOUN 01	ENTR
d. 00042		ENTR
e. 00000		ENTR

TOOLS AND MATERIAL

PROCEDURE

INITIALIZATION

1. Insure that the OIA ON/ISS POWER DISABLED pushbutton on the Test Control panel is lighted.

2. Press the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons to apply power to the CGC and provide power for DSKY illumination. The pushbuttons shall light.

3. Insure the STBY condition lamp on the DSKY is lighted. If not, perform the following DSKY operations:

a. VERB 60 ENTR

Press and hold the STBY pushbutton until the STBY lamp lights.

4. Insure the PROCEED portion of the PROCEED/ISS STANDBY pushbutton on the Test Control panel is lighted.

5. Press the PROCEED/ISS STANDBY pushbutton. The PROCEED lamp shall go out and the ISS STANDBY lamp shall light.

6. Insure the PSA HTR PWR lamp on the Temperature Monitor Control panel is lighted.

7. Observe the Monitor panel to confirm that the ERROR DETECT indicator and ALARM INHIBITED pushbuttons are not lighted.

8. Observe the Temperature Monitor Control panel to confirm that the failure lamps are not lighted.

9. Set the CROSSBAR CONTROL on the

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ______

JOB STANDBY CONTROL TEST

JDC 12205 REV - PAGE 2 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

Primary Signal Selector panel to 172. Adjust the G & N POWER ADJUST on the Test Control panel until the DVM indicates 28.0 (±0.5) vdc.

TEMPERATURE CONTROL

10. a. Set the CROSSBAR CONTROL to 156. Measure and record the instantaneous IRIG Temperature deviation voltage indicated on the DVM.

b. Set the CROSSBAR CONTROL to 255. Measure and record the instantaneous Accelerometer Temperature deviation voltage indicated on the DVM.

11. a. Repeat step 10.a one hour after performing it initially.

b. Repeat step 10.b one hour after performing it initially.

NOTE: Continue with the remaining steps during this one hour period.

12. Calculate the IRIG and Accelerometer Temperatures measured in steps 11.a and 11.b on the Calculation sheet.

28 VDC IMU STANDBY BUS

13. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 120. Measure and record the voltage indicated on the DVM.

3200 SUSPENSION POWER

14. Set switches and controls on the COUNTER as follows:

DISPLAY TIME (N_2) to 10^5

DISPLAY RESET to ZERO

CLOCK FREQUENCY DIVIDER to 10

CLOCK SELECTOR to INT

FUNCTION to OFF

INPUT SELECTOR to C SENSE

SENSE SELECTOR to FWD

TRIGGER VOLTAGE ATTN D to 10

TRIGGER VOLTAGE to fully counterclockwise

SAMPLE TIME (N_1) to 032000

FUNCTION to RATIO OR PERIOD

15. Set the COUNTER INPUT "D" SIGNAL selector on the Primary Signal Selector panel to 5. Insure that the D SIGNAL pushbutton is lighted.

16. Adjust the ATTEN D selector on the Counter to the highest level that will cause triggering. Set the corresponding TRIGGER VOLTAGE control to insure that the Counter starts and subsequently stops in approximately 10 seconds. The Counter shall indicate approximately 100000. Record the Counter indication.

17. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 123.

DATE ______

JOB STANDBY CONTROL TEST

JDC 12205 REV - PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

Measure and record the 3200 cps 28V feedback voltage indicated on the DVM.

MASTER CLOCK SYNC

18. Insure that the Computer Calibration Equipment console has been calibrated within the past seven days.

19. Insure that the CGC power has been on for at least two hours before proceeding.

20. Set the Frequency Counter Controls on the Computer Calibration Equipment Console as follows:

FUNCTION switch to FREQ.

INPUT VOLTS RMS switch to 6.4

SLOPE switch to +

GATE switch to OPEN

TRIGGER LEVEL switch to CENTER

21. Set the FREQ-TIME switch on the Frequency Counter to the 100-second position (first setting from fully counterclockwise).

22. Connect cable W259 (2014470-011) P-6 to W232-P4 and P1 to Counter connector on the Control and Interfaces panel of the Computer Calibration Equipment console.

23. Select an INPUT VOLTS RMS switch position on the CMC Counter where the TRIGGER LEVEL can be properly adjusted. Set the TRIGGER LEVEL to the center of the counting range. Set the GATE switch to AUTO. Insure that printer power is On and the printer is in Record Mode. Read the frequency directly in CPS. Count output frequency for 15 minutes and record data from the print out of Computer Calibration Equipment Console.

24. Disconnect cable W259(2014470-011) P-6 from the Counter connector and connect P1 to CLOCK (BNC) connector on the Interface Signals patch board on the CTS. Connect the jumper cable from the AGC CLOCK (BNC) on the Systems Interface panel of the CTS to the adjacent CLOCK (BNC) on the Interface Signals patch board.

25. Connect a jumper from the remaining CLOCK connector on the Interface Signals patch board to either 1 MEG input channel of the Oscilloscope on the CTS.

26. Measure and record the following characteristics on the Computer Test Set Oscilloscope:

a. Amplitude, volts peak-to-peak

b. Width at 50% of amplitude

c. Rise time at 10% to 90% amplitude

d. Noise

+4 VDC CGC POWER SUPPLY

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Measure and record the +4 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 4 volt supply voltage. Record indication.

+14 VDC CGC POWER SUPPLY

28. Set the CROSSBAR CONTROL to 293. Measure and record the +14 VDC CGC Power Supply voltage indicated on the DVM. Use the oscilloscope to measure the noise present on the 14 volt supply voltage. Record indication.

SUBSYSTEM G & N SYSTEM

ASSY

CGC VOLTAGE MARGIN TEST

29. Perform the following MAIN DSKY operations:

a. Press and hold the STBY pushbutton until the pushbutton goes out.

b.	RESET	Press
c.	VERB 61	ENTR
d.	VERB 36	ENTR

30. Set the STRT 1 and STRT 2 switches on the Buffer Circuit Assembly to ON.

31. Set the AGC VOLTAGE 1 and 2 controls on the CTS Power Control panel to midrange and set the CONTROL 1 and CONTROL 2 switches to ON.

32. Set the VOLTAGE SELECT switch to CGC 4V and adjust the CONTROL 1 for 4.0 (±0.15) vdc.

NOTE: If the control does not vary the voltage, set the CONTROL 1 switch to OFF; turn CONTROL 1 fully counterclockwise and back to midrange; set the CONTROL 1 switch to ON, and then readjust.

33. Set the VOLTAGE SELECT switch to CGC 14V and adjust the CONTROL 2 for 14 (±0.2) vdc.

NOTE: If the control does not vary the voltage, set the CONTROL 2 switch to OFF; turn CONTROL 2 fully counterclockwise and back to midrange; set the CONTROL 2 switch to ON, and then readjust.

34. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194. Monitor the +4 VDC CGC power supply voltage indicated on the DVM.

35. Using CONTROL 1, slowly reduce the CGC 4 VDC supply voltage until the CMC lamp on the Indicator Control panel lights. The PGNS lamp on the Indicator Control panel, the RESTART lamp on the DSKY's and the CGC/LGC WARNING lamp and the G/N CAUTION lamp on the Monitor panel shall be lighted. Record the DVM indication.

36. Using CONTROL 1, adjust the +4 V supply to approximately 4 volts. Press the RSET pushbutton on the NAV DSKY. All alarms shall go out within 60 seconds.

37. Using CONTROL 1, slowly increase the CGC 4 CDC supply voltage until the CMC lamp on the Indicator Control panel lights. The PGNS lamp on the Indicator Control panel, the RESTART lamp on the DSKY's and the CGC/LGC WARNING lamp and the G/N CAUTION lamp on the Monitor panel shall be lighted. Record the DVM indication.

38. Using CONTROL 1, adjust the CGC 4 VDC supply to 4.00 (±0.15) vdc on the DVM. Press the RSET pushbutton on the NAV DSKY. All alarms shall go out within 60 seconds.

39. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 293. Monitor the CGC 14 VDC voltage on the DVM.

DATE ______

40. Using CONTROL 2, slowly reduce the CGC 14 VDC supply voltage until the CMC lamp on the Indicator Control panel lights. The PGNS lamp on the Indicator Control panel, the RESTART lamp on the DSKY's and the CGC/LGC WARNING lamp and the G/N CAUTION lamp on the Monitor panel shall be lighted. Record the DVM indication.

41. Using CONTROL 2, adjust the CGC 14 VDC supply to approximately 14 volts. Press the RSET pushbutton on the NAV DSKY. All alarms shall go out within 60 seconds.

42. Using CONTROL 2, slowly increase the CGC 14 VDC supply until the CMC lamp on the Indicator Control panel lights. The PGNS lamp on the Indicator Control panel, the RESTART lamp on the DSKYs and the CGC/LGC WARNING lamp and the G/N CAUTION lamp on the Monitor panel shall be lighted. Record the DVM indication.

43. Use CONTROL 2, if necessary, to adjust the CGC 14 VDC voltage to 16.2 (±0.2) volts. Press the INHIBIT COMPUTER POWER FAIL pushbutton on the Test Control panel and the RSET pushbutton on the NAV DSKY. All alarms shall go out within 60 seconds and the INHIBIT COMPUTER POWER FAIL lamp shall light.

44. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194 to monitor the CGC 4 VDC supply.

45. Using CONTROL 1, slowly reduce the CGC 4 VDC voltage on the DVM to 3.6 (±0.05) volts. No alarms shall occur.

46. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 293 to monitor the CGC 14 VDC supply.

47. Using CONTROL 2, slowly reduce the CGC 14 VDC voltage on the DVM to 12.6 (±0.2) volts. No alarms shall occur.

48. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194 to monitor the CGC 4 VDC supply.

49. Using CONTROL 1, slowly increase the CGC 4 VDC voltage on the DVM to 4.5 (±0.2) volts. No alarms shall occur.

50. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 293 to monitor the CGC 14 VDC supply.

51. Using CONTROL 2, slowly increase the CGC 14 VDC voltage to 16.2 (±0.2) volts. No alarms shall occur.

52. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 194 to monitor the CGC 4 VDC supply.

53. Using CONTROL 1, slowly decrease the CGC 4 VDC voltage on the DVM to 4.0 (±0.15) volts. No alarms shall occur.

54. Set the CROSSBAR CONTROL to 293 to monitor the CGC 14 VDC supply.

55. Using CONTROL 2, adjust the CGC 14 VDC voltage on the DVM to 14.0 (±0.2) volts.

DATE ________

---

56. Press the INHIBIT COMPUTER POWER FAIL pushbutton on the Test Control panel and the RSET pushbutton on the NAV DSKY. The INHIBIT COMPUTER POWER FAIL lamp shall go out.

57. Set the CONTROL 1 and CONTROL 2 switches on the Power Control panel to OFF.

58. Set the STRT 1 and STRT 2 switches on the Buffer Circuit Assembly to ON.

BMAG ATTITUDE SIGNALS

59. Perform the following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00013		ENTR
c.	00200		ENTR
d.	VERB 25	NOUN 01	ENTR
e.	00042		ENTR
f.	77777		ENTR
g.	77777		ENTR
h.	77777		ENTR
i.	VERB 15	NOUN 01	ENTR
j.	00042		ENTR

Observe 77777 is displayed in Rows 1, 2, and 3 of both DSKY's.

60. Press the SINGLE PULSE pushbutton on the XY Interface panel. The pushbutton shall light.

61. Set the AGC INPUT COUNTER switch to position 6 and press the POSITIVE pushbutton. The pushbutton shall light.

62. Press the SINGLE PULSE switch. After the COMP ACTY light flashes on and off, the Row 1 display will have changed to 00001. Continue actuating the SINGLE PULSE switch waiting until the COMP ACT lamp flashes to allow the DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010, and 00011.

63. Press the POSITIVE and NEGATIVE pushbuttons. The NEGATIVE pushbutton shall light and the POSITIVE pushbutton shall go out.

64. Actuate the SINGLE PULSE pushbutton as indicated in step 62. Row 1 of the DSKY shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

65. Set the AGC INPUT COUNTER switch to position 7 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

66. Repeat step 62 except observe Row 2 of the DSKY for proper indications.

67. Repeat steps 63 and 64 except observe Row 2 of the DSKY for proper indications.

68. Set the AGC INPUT COUNTER switch to position 8 and press the POSITIVE and NEGATIVE pushbuttons. The POSITIVE pushbutton shall light and the NEGATIVE pushbutton shall go out.

69. Repeat step 62 except observe Row 3 of the DSKY for proper indications.

70. Repeat steps 63 and 64 except observe Row 3 of the DSKY for proper indications.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

MAIN DSKY CHECK

NOTE: Insure step 2 through 18 operations are performed on the MAIN DSKY.

2. Perform the following MAIN DSKY operations:

VERB 21 NOUN 27 ENTR
00011 ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY.

NAV DSKY CHECK

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 04500 respectively and no program alarms shall occur.)

---

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. B PAGE 1 OF 6
INITIAL TDRR 29882 D.S. PGS 2

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer

TOOLS AND MATERIAL

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

MAIN DSKY CHECK

NOTE: Insure step 2 through 18 operations are performed on the MAIN DSKY.

2. Perform the following MAIN DSKY operations:

VERB 21 NOUN 27 ENTR
00011 ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's

18. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

> NOTE: After completion of step 19, the MAIN DSKY may be removed from the system configuration if desired. In this event, down-mode the system to OFF according to procedure in JDC 12204. Remove MAIN DSKY and up-mode the system according to procedure in section A of JDC 12204.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY.

NAV DSKY CHECK

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:

a.	VERB 21	NOUN 27	ENTR
b.	Observe		
	VERB 21	NOUN 27	Flashing
c.	77767		ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:

a.	VERB 57		ENTR
b.	Observe		
	VERB 21	NOUN 01	Flashing
c.	00004		ENTR
d.	Observe		
	VERB 16	NOUN 20	Displayed

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 04500 respectively and no program alarms shall occur.)

---

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. C PAGE 1 OF 6
INITIAL TDRR 29882 D.S. PGS. 2

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer

TOOLS AND MATERIAL

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

MAIN DSKY CHECK

NOTE: Insure step 2 through 18 operations are performed on the MAIN DSKY.

2. Perform the following MAIN DSKY operations:

VERB 21 NOUN 27 ENTR
00011 ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's

18. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

NOTE: After completion of step 19, the MAIN DSKY may be removed from the system configuration if desired. In this event, down-mode the system to OFF according to procedure in JDC 12204. Remove MAIN DSKY and up-mode the system according to procedure in section A of JDC 12204.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

NAV DSKY CHECK

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 04500 respectively and no program alarms shall occur.)

DATE 30 JUN 66

---

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, −0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, −0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

> NOTE: After completion of step 19, the MAIN DSKY may be removed from the system configuration if desired. In this event, down-mode the system to OFF according to procedure in JDC 12204. Remove MAIN DSKY and up-mode the system according to procedure in section A of JDC 12204.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

NAV DSKY CHECK

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 04500 respectively and no program alarms shall occur.)

---

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

IMPORTANT: Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG Test within 0.2 hours of that time.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

MAIN DSKY CHECK

NOTE: Insure step 2 through 18 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 18 are satisfactorily completed with one DSKY.

2. Perform the following MAIN DSKY operations:

VERB 21	NOUN 27	ENTR
00011		ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

- a. 9's
- b. 8's
- c. 7's
- d. 6's
- e. 5's
- f. 4's
- g. 3's
- h. 2's
- i. 1's
- j. 0's
- k. Minus signs in Row 1, Row 2 and Row 3
- l. VERB-NOUN Flashing

} on concurrently for 5 seconds

- m. Plus signs in Row 1, Row 2 and Row 3
- n. VERB-NOUN Flashing

} on concurrently for 5 seconds

4. Enter VERB 35 and press the ENTR pushbutton on the MAIN DSKY. The following MAIN DSKY displays shall illuminate for 5 seconds.

- a. UPLINK ACTY
- b. NO ATT (Momentarily on)
- c. STBY
- d. KEY REL Flashing
- e. TEMP
- f. GIMBAL LOCK
- g. PROG
- h. RESTART
- i. TRACKER
- j. OPR ERROR Flashing

} on concurrently for 5 seconds

- k. VERB-NOUN Flashing
- l. PGNS, CMC and ISS lamps on Indicator Control panel
- m. Plus 88888 in Row 1, Row 2 and Row 3

} on concurrently for 5 seconds (CMC remains on approx. 60 seconds after other lamps go out)

After indications a through m go out, plus 88888's shall remain on Row 1, Row 2 and Row 3.

MANUAL DSKY OPERATION CHECK

5. Perform the following MAIN DSKY operations:

a. VERB 24	NOUN 01	ENTR
b. Observe		
VERB 24	NOUN 01	Flashing
c. 01700		ENTR
d. Observe		
VERB 21	NOUN 01	Flashing
e. +12345		ENTR
f. Observe		
VERB 22	NOUN 01	Flashing
g. -67890	Do NOT press	ENTR

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the MAIN DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 and NOUN 01 continue flashing.

ALARM AND INTERRUPT TEST PARITY FAIL TEST

8. Perform the following MAIN DSKY operations:

a. VERB 57	ENTR

l. 01600		ENTR

DATE 30 JUN 66

m. Observe
VERB 23 NOUN 26 Flashing
n. 00003 ENTR
o. VERB 30 ENTR

18. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

NOTE: After completion of step 19, the MAIN DSKY may be removed from the system configuration if desired, but only if the NAV DSKY remains for remainder of the test. In this event, down-mode the system to OFF according to procedure in JDC 12204. Remove MAIN DSKY and up-mode the system according to procedure in section A of JDC 12204.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

NAV DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed

The NO ATT lamp shall light momentarily then go out.

---

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 04500 respectively and no program alarms shall occur.)

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified in steps 12, 15, and 18.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified in steps 9, 10, 12, 15, and 18.

In order to verify all indications, change DSKY locations and repeat steps 9 through 18.

9. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY.

10. Press the RESET pushbutton on the MAIN DSKY. The RESTART, PGNS and G/N CAUTION lamps shall go out. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Observe the DSKY blanks except the PROG lamp which shall indicate 00.

RUPT LOCK

11. Perform the following MAIN DSKY operations:

a.	VERB 24	NOUN 01	ENTR

n. 00003 ENTR
o. VERB 30 ENTR

18. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

NOTE: After completion of step 19, the MAIN DSKY may be removed from the system configuration if desired, but only if the NAV DSKY remains for remainder of the test. In this event, down-mode the system to OFF according to procedure in JDC 12204. Remove MAIN DSKY and up-mode the system according to procedure in section A of JDC 12204.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

NAV DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR

---

b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications. (During the 15 minute interval, Rows 1, 2, and 3 will indicate approximately 04500, 31500, and 04500 respectively and no program alarms shall occur.)

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

JOB G & N SYSTEM OPERATIONAL TEST | **JDC** 12206 **REV.** G **PAGE** 1 **OF** 6 | **INITIAL TDRR** 29882 **D.S. PGS** 2

SUBSYSTEM G & N SYSTEM | **ASSY.**

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

TOOLS AND MATERIAL

DESCRIPTION (Cont)

IMPORTANT: Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG Test within 0.2 hours of that time.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

MAIN DSKY CHECK

NOTE: Insure step 2 through 18 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 18 are satisfactorily completed with one DSKY.

2. Perform the following MAIN DSKY operations:

VERB 21	NOUN 27	ENTR
00011		ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified in steps 12, 15, and 18.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified in steps 9, 10, 12, 15, and 18.

In order to verify all indications, change DSKY locations and repeat steps 9 through 18.

9. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY.

10. Press the RESET pushbutton on the MAIN DSKY. The RESTART, PGNS and G/N CAUTION lamps shall go out. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Observe the DSKY blanks except the PROG lamp which shall indicate 00.

RUPT LOCK

11. Perform the following MAIN DSKY operations:

a. VERB 24 NOUN 01 ENTR
b. Observe

18. Verify that the RESTART condition lamp on the MAIN DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the MAIN DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

NOTE: After completion of step 19, the MAIN DSKY may be removed from the system configuration if desired, but only if the NAV DSKY remains for remainder of the test. In this event, down-mode the system to OFF according to procedure in JDC 12204. Remove MAIN DSKY and up-mode the system according to procedure in section A of JDC 12204.

19. Press the RESET pushbutton on the MAIN DSKY. Enter VERB 36 and press the ENTR pushbutton on the MAIN DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

NAV DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the NAV DSKY.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR

---

b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed
e. VERB 34 ENTR

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications.

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. H PAGE 1 OF 7
INITIAL TDRR 29882 D.S. PGS 2

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer

TOOLS AND MATERIAL

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

IMPORTANT: Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG Test within 0.2 hours of that time.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: Insure steps 2 through 19 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 19 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 19 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Perform the following DSKY operations:
VERB 21 NOUN 27 ENTR
00011 ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's

o. 00003 ENTR
p. VERB 30 ENTR

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified in steps 9, 10, 12, 15, and 18.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified in steps 9, 10, 12, 15, and 18.

In order to verify all indications, change DSKY locations and repeat steps 8 through 19.

9. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY.

10. Press the RESET pushbutton on the DSKY. The RESTART, PGNS and G/N CAUTION lamps shall go out. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Observe the DSKY blanks except the PROG lamp which shall indicate 00.

RUPT LOCK

11. Perform the following DSKY operations:
a. VERB 24 NOUN 01 ENTR
b. Observe
VERB 24 NOUN 01 Flashing

18. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

19. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

SECOND DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the second DSKY.

NOTE: If two DSKY's are available for testing, one DSKY may be removed from the system configuration after completion of step 20 if desired but the remaining DSKY must be placed in the NAV DSKY location for the remainder of the test. If only one DSKY is available for testing, that DSKY must be placed in the NAV DSKY location for the remainder of the test. Before removing a DSKY or changing DSKY locations, downmode the system to the OIA ON mode according to procedures given in JDC 12204.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

---

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed
e. VERB 34 ENTR

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications.

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

---

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. J PAGE 1 OF 7
INITIAL TDRR 29882 D.S. PGS 2

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG Test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: Insure steps 2 through 19 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 19 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 19 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Perform the following DSKY operations:

VERB 21 NOUN 27 ENTR
00011 ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are

VERIFICATION WITH SIDL REQUIRED BEFORE USE

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified in steps 9, 10, 12, 15, and 18.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified in steps 9, 10, 12, 15, and 18.

In order to verify all indications, change DSKY locations and repeat steps 8 through 19.

9. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY.

10. Press the RESET pushbutton on the DSKY. The RESTART, PGNS and G/N CAUTION lamps shall go out. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Observe the DSKY blanks except the PROG lamp which shall indicate 00.

RUPT LOCK

11. Perform the following DSKY operations:

a. VERB 24 NOUN 01 ENTR
b. Observe

19. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

SECOND DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the second DSKY.

NOTE: If two DSKY's are available for testing, one DSKY may be removed from the system configuration after completion of step 20 if desired but the remaining DSKY must be placed in the NAV DSKY location for the remainder of the test. If only one DSKY is available for testing, that DSKY must be placed in the NAV DSKY location for the remainder of the test. Before removing a DSKY or changing DSKY locations, downmode the system to the OIA ON mode according to procedures given in JDC 12204.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

---

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed
e. VERB 34 ENTR

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications.

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

PIPA AND IRIG TEST (Low Voltage)

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 30.8 (+0.0, -0.25) vdc. Record indication.

PIPA AND IRIG TEST (High Voltage)

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

---

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.0 (±0.5) vdc.

INITIAL TDRR 29882 D.S. PGS. 2

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and Interrupts Test checks computer

TOOLS AND MATERIAL

DESCRIPTION (Cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of logal g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC Self Check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG Test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

INITIALIZATION

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: Insure steps 2 through 19 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 19 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 19 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Perform the following DSKY operations:

VERB 21	NOUN 27	ENTR
00011		ENTR

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

lighted. Including the 9's, the following shall be displayed for approximately 5 seconds.

a. 9's
b. 8's
c. 7's
d. 6's
e. 5's
f. 4's
g. 3's
h. 2's
i. 1's
j. 0's
k. Minus signs in Row 1, Row 2 and Row 3
l. VERB-NOUN Flashing
} on concurrently for 5 seconds

m. Plus signs in Row 1, Row 2 and Row 3
n. VERB-NOUN Flashing
} on concurrently for 5 seconds

4. Enter VERB 35 and press the ENTR pushbutton on the DSKY. The following DSKY displays shall illuminate for 5 seconds.

a. UPLINK ACTY
b. NO ATT (Momentarily on)
c. STBY
d. KEY REL Flashing
e. TEMP
f. GIMBAL LOCK
g. PROG
h. RESTART
i. TRACKER
j. OPR ERROR Flashing
} on concurrently for 5 seconds

k. VERB-NOUN Flashing } on concurrently for 5 seconds
l. PGNS, CMC and ISS lamps on Indicator Control panel } (CMC remains on approx. 60 seconds after other lamps go out)
m. Plus 88888 in Row 1, Row 2 and Row 3

After indications a through m go out, plus 88888's shall remain on Row 1, Row 2 and Row 3.

MANUAL DSKY OPERATION CHECK

5. Perform the following DSKY operations:

a.	VERB 24	NOUN 01	ENTR
b.	Observe		
	VERB 24	NOUN 01	Flashing
c.	01700		ENTR
d.	Observe		
	VERB 21	NOUN 01	Flashing
e.	+12345		ENTR
f.	Observe		
	VERB 22	NOUN 01	Flashing
g.	-67890	Do NOT press	ENTR

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 and NOUN 01 continue flashing.

ALARM AND INTERRUPT TEST PARITY FAIL TEST

8. Perform the following DSKY operations:

a.	VERB 57		ENTR

---

b.	00015		ENTR
c.	Observe		
	DSKY blanks		
d.	VERB 27	NOUN 01	ENTR
e.	Observe		
	VERB 21	NOUN 01	Flashing
f.	70000		ENTR

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified in steps 9, 10, 12, 15, and 18.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified in steps 9, 10, 12, 15, and 18.

In order to verify all indications, change DSKY locations and repeat steps 8 through 19.

9. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY.

10. Press the RESET pushbutton on the DSKY. The RESTART, PGNS and G/N CAUTION lamps shall go out. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Observe the DSKY blanks except the PROG lamp which shall indicate 00.

RUPT LOCK

11. Perform the following DSKY operations:

a.	VERB 24	NOUN 01	ENTR
b.	Observe		
	VERB 24	NOUN 01	Flashing
c.	01600		ENTR
d.	Observe		
	VERB 21	NOUN 01	Flashing
e.	30001		ENTR
f.	Observe		
	VERB 22	NOUN 01	Flashing
g.	01600		ENTR
h.	VERB 25	NOUN 26	ENTR

---

i.	Observe		
	VERB 21	NOUN 26	Flashing
j.	00001		ENTR
k.	Observe		
	VERB 22	NOUN 26	Flashing
l.	01600		ENTR
m.	Observe		
	VERB 23	NOUN 26	Flashing
n.	00003		ENTR
o.	VERB 31		ENTR

12. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2, and 3 shall indicate 00000 on the DSKY. The AGC ALARM lamp 1 on the Logic Drawer No. 1 of the CTS shall be lighted.

13. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

TC TRAP TEST

14. Perform the following DSKY operations:

a.	VERB 21	NOUN 02	ENTR
b.	Observe		
	VERB 21	NOUN 02	Flashing
c.	01600		ENTR
d.	Observe		
	VERB 21	NOUN 02	Flashing
e.	01600		ENTR
f.	VERB 25	NOUN 26	ENTR
g.	Observe		
	VERB 21	NOUN 26	Flashing
h.	04000		ENTR
i.	Observe		
	VERB 22	NOUN 26	Flashing
j.	01600		ENTR
k.	Observe		
	VERB 23	NOUN 26	Flashing
l.	00003		ENTR
m.	VERB 30		ENTR

15. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY. The AGC ALARM lamp 3 in the Logic Drawer No. 1 of the CTS shall be lighted.

16. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

NIGHT WATCHMAN TEST

17. Perform the following DSKY operations:

a.	VERB 24	NOUN 01	ENTR
b.	Observe		
	VERB 24	NOUN 01	Flashing
c.	01600		ENTR
d.	Observe		
	VERB 21	NOUN 01	Flashing
e.	30001		ENTR
f.	Observe		
	VERB 22	NOUN 01	Flashing
g.	01600		ENTR
h.	VERB 25	NOUN 26	ENTR

i. Observe
VERB 21 NOUN 26 Flashing
j. 34000 ENTR
k. Observe
VERB 22 NOUN 26 Flashing
l. 01600 ENTR
m. Observe
VERB 23 NOUN 26 Flashing
n. 00003 ENTR
o. VERB 30 ENTR

18. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

19. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

SECOND DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the second DSKY.

NOTE: If two DSKY's are available for testing, one DSKY may be removed from the system configuration after completion of step 20 if desired but the remaining DSKY must be placed in the NAV DSKY location for the remainder of the test. If only one DSKY is available for testing, that DSKY must be placed in the NAV DSKY location for the remainder of the test. Before removing a DSKY or changing DSKY locations, downmode the system to the OIA ON mode according to procedures given in JDC 12204.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

---

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed
e. VERB 34 ENTR

The NO ATT lamp shall light momentarily then go out.

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications.

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Low Voltage)

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

PIPA AND IRIG TEST (High Voltage)

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 31.8 (+0.0, -0.25) vdc. Record indication.

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

---

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.5) vdc.

13. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

TC TRAP TEST

14. Perform the following DSKY operations:

a. VERB 21 NOUN 02 ENTR
b. Observe
VERB 21 NOUN 02 Flashing
c. 01600 ENTR
d. Observe
VERB 21 NOUN 02 Flashing
e. 01600 ENTR
f. VERB 25 NOUN 26 ENTR
g. Observe
VERB 21 NOUN 26 Flashing
h. 04000 ENTR
i. Observe
VERB 22 NOUN 26 Flashing
j. 01600 ENTR
k. Observe
VERB 23 NOUN 26 Flashing
l. 00003 ENTR
m. VERB 30 ENTR

15. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY. The AGC ALARM lamp 3 in the Logic Drawer No. 1 of the CTS shall be lighted.

16. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

NIGHT WATCHMAN TEST

17. Perform the following DSKY operations:

a. VERB 24 NOUN 01 ENTR
b. Observe
VERB 24 NOUN 01 Flashing
c. 01600 ENTR
d. Observe
VERB 21 NOUN 01 Flashing
e. 30001 ENTR
f. Observe
VERB 22 NOUN 01 Flashing
g. 01600 ENTR
h. VERB 25 NOUN 26 ENTR

i. Observe
VERB 21 NOUN 26 Flashing
j. 34000 ENTR
k. Observe
VERB 22 NOUN 26 Flashing
l. 01600 ENTR
m. Observe
VERB 23 NOUN 26 Flashing
n. 00003 ENTR
o. VERB 30 ENTR

18. Verify that the RESTART condition lamp on the DSKY and PGNS lamp on the Indicator Control panel are lighted. The G/N CAUTION lamp on the Monitor panel shall be lighted. VERB 05 and NOUN 31 shall be displayed and Rows 1, 2 and 3 shall indicate 00000 on the DSKY. The AGC ALARM lamp 5 on the Logic Drawer No. 1 of the CTS shall be lighted.

19. Press the RESET pushbutton on the DSKY. Enter VERB 36 and press the ENTR pushbutton on the DSKY. Press ALARM RESET pushbutton on the P & M drawer of CTS.

SECOND DSKY CHECK

NOTE: Disregard step 20 if only one DSKY is used in system under test.

20. Repeat steps 2 through 19 for the second DSKY.

NOTE: If two DSKY's are available for testing, one DSKY may be removed from the system configuration after completion of step 20 if desired but the remaining DSKY must be placed in the NAV DSKY location for the remainder of the test. If only one DSKY is available for testing, that DSKY must be placed in the NAV DSKY location for the remainder of the test. Before removing a DSKY or changing DSKY locations, downmode the system to the OIA ON mode according to procedures given in JDC 12204.

IRIG AND PIPA TEST INITIALIZATION

21. Press the ISS OPERATE pushbutton on the Test Control panel.

22. Connect the input bus on the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

---

23. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.30) vdc. Record indication.

CGC SELF CHECK

24. Perform the following DSKY operations:
a. VERB 21 NOUN 27 ENTR
b. Observe
VERB 21 NOUN 27 Flashing
c. 77767 ENTR

Allow the test to run 5 minutes. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Nominal Voltage)

25. Insure that at least 90 seconds have elapsed since performing step 21 and that the PIPA loops have closed as indicated by a butterfly pattern on the PIPA monitor scope of the OIA.

26. Perform the following DSKY operations:
a. VERB 57 ENTR
b. Observe
VERB 21 NOUN 01 Flashing
c. 00004 ENTR
d. Observe
VERB 16 NOUN 20 Displayed
e. Observe NO ATT lamp lights momentarily then goes out
f. VERB 34 ENTR

27. In approximately 15 minutes VERB 06 and NOUN 66 will flash. Local gravity as measured by X, Y, and Z PIPA will be displayed on Row 1 and Row 2. Record indications.

28. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

29. When VERB 06 and NOUN 66 flash the horizontal component of earth rate on the X, Y, and Z IRIGS will be displayed in Row 2. Record indication. Record any failures indicated by VERB 05 and NOUN 31 being displayed on the DSKY's. If no failure occurs, write none on the Data Sheet.

PIPA AND IRIG TEST (Low Voltage)

30. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

31. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0, -0.25) vdc. Record indication.

32. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

33. Repeat steps 24 through 29.

PIPA AND IRIG TEST (High Voltage)

34. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

35. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 31.8 (+0.25, -0) vdc. Record indication.

36. Enter VERB 36 and press the ENTR pushbutton on the DSKY.

37. Repeat steps 24 through 29.

---

38. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

39. Connect the input bus to the Digital Voltmeter (DVM) by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to 175.

40. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.5) vdc.

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. N PAGE 1 OF 25
INITIAL TDRR 29882 D.S. PGS 3

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL JDC 12206 CTS UPLINK Tape, P/N 2901626-001

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 0014?A
Chg. 1-1?-66

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1	- RUPT LOC	
ALARMS #2	- CTR FAIL	
ALARMS #3	- TC TRAP	
ALARMS #4	- OSCILLATOR FAIL	
ALARMS #5	- NIGHT-WATCHMAN	
ALARMS #6	- PIPA FAIL	
ALARMS #7	- VOLTAGE FAIL	
ALARMS #8	- SCALER FAIL	
ALARMS #9	- WARNING FILTER	
ALARMS #12	- DOUBLE SCALER	
ALARMS #15	- GOJAM	CTS P/N
ALARMS #16	- E-MEMORY PARITY FAIL	2014042-071 only

2. Perform following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 21	NOUN 27	ENTR
c.	00011		ENTR

DATE 30 JUN 66

---

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds:

a. 9's
b. 8's
c. 7's
d. 6's
e. 5's
f. 4's
g. 3's
h. 2's
i. 1's
j. 0's
k. Minus signs in Row 1, Row 2, and Row 3
l. VERB-NOUN Flashing
m. COMP ACTY
(k through m: on concurrently for approx. 5 seconds)

n. Plus signs in Row 1, Row 2, and Row 3
o. VERB-NOUN Flashing
p. COMP ACTY
(n through p: on concurrently for approx. 5 seconds)

q. COMP ACTY ——— on for approx. 5 seconds, then DSKY blanks

NOTE: Insure that CONDITION LAMPS switch on Indicator Control panel is set to ON.

4. Enter VERB 35 and press ENTR pushbutton on the DSKY. The following DSKY displays shall illuminate for 5 seconds:

a. UPLINK ACTY
b. NO ATT (Momentarily on)
c. STBY
d. KEL REL Flashing
e. TEMP
f. GIMBAL LOCK
g. PROG
h. RESTART
i. TRACKER
j. OPR ERR Flashing
(b through j: on concurrently for approx. 5 seconds)

k. VERB-NOUN Flashing
l. PGNS, CMC and ISS lamps on Indicator Control panel
m. Plus 88888 in Row 1, Row 2, and Row 3
(k through m: on concurrently for approx. 5 seconds (CMC remains on 10 to 20 seconds after other lamps go out))

After indications a through l go out, plus 88888's shall remain on Row 1, Row 2, and Row 3.

DATE 30 JUN 66

MANUAL DSKY OPERATION CHECK

5. Perform following DSKY operations:

a.	VERB 24	NOUN 01	ENTR
b.	Observe:		
	VERB 24	NOUN 01	Flashing
c.	01700		ENTR
d.	Observe:		
	VERB 21	NOUN 01	Flashing
e.	+12345		ENTR
f.	Observe:		
	VERB 22	NOUN 01	Flashing
g.	-67890	Do NOT press ENTR	

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 NOUN 01 continue flashing.

NOTE: 1. The remainder of this JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

2. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedure in this JDC.

DATE 30 JUN 66

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

NOTE: Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(B) Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(C) Logic Drawer No. 2 - Set AGREEMENT B digit-switches to X01X3070. Set AGREEMENT B switch to STOP.

(D) RDC Interface panel - Press to light CH33-10 pushbutton.

(E) Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape. If alarms occur, press PROCEED and ALARM RESET pushbuttons on

SECOND DSKY CHECK

NOTE: Disregard step 31 if only one DSKY is used in system under test.

31. Repeat steps 2 through 30 for the second DSKY.

NOTE: If two DSKY's are available for testing, one DSKY may be removed from the system configuration after completion of step 31 if desired but the remaining DSKY must be placed in the NAV DSKY location for the remainder of the test. If only one DSKY is available for testing, that DSKY must be placed in the NAV DSKY location for the remainder of the test. Before removing a DSKY or changing DSKY locations, downmode the system to the OIA ON mode according to procedures given in JDC 12204.

120. Connect the input bus to the DVM by setting the CROSSBAR CONTROL on Primary Signal Selector panel to 175.

121. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 25.8 (+0.25, -0) vdc. Record indication.

122. Press EXECUTE pushbutton on Programmer and Monitor panel.

123. Repeat steps 114 through 119.

IRIG AND PIPA TEST (High Voltage)

124. Connect the input bus to the DVM by setting the CROSSBAR CONTROL on Primary Signal Selector panel to 175.

125. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 31.8 (+0, -0.25) vdc. Record indication.

126. Press EXECUTE pushbutton on Programmer and Monitor panel.

127. Repeat steps 114 through 119.

128. Press EXECUTE pushbutton on Programmer and Monitor panel.

129. Connect the input bus to the DVM by setting the CROSSBAR CONTROL on Primary Signal Selector panel to 175.

130. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates an input bus voltage of 28.8 (±0.5) vdc.

131. Perform calculations on the calculation sheet.

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

132. Press to extinguish POSITIVE, NEGATIVE, and TAPE READER pushbuttons on XY Interface panel. Set AGC INPUT COUNTERS switch to 1.

133. Press MONITOR pushbutton on Programmer and Monitor panel. MONITOR pushbutton shall light. AGC INPUT-CTR pushbutton shall go out. Press to extinguish TAPE FREE RUN pushbutton.

134. Set AGREEMENT B switch on Logic Drawer No. 2 to OFF and then set AGREEMENT B digitswitches to XXXXXXXX.

135. Press to extinguish CH33-10 pushbutton on RDC Interface panel.

136. Set Power switch on Tape Reader to OFF and remove tape. If alarms occur, press ALARM RESET pushbutton on Programmer and Monitor panel and press RESET pushbutton on DSKY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer

INTERVAL

TOOLS AND MATERIAL JDC 12206 CTS UPLINK Tape, P/N 2901626-002

DESCRIPTION (cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM OPERATIONAL TEST | **JDC** 12206 **REV** P **PAGE** 2 **OF** 25

SUBSYSTEM G & N SYSTEM | **ASSY**

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1 - RUPT LOC
ALARMS #2 - CTR FAIL
ALARMS #3 - TC TRAP
ALARMS #4 - OSCILLATOR FAIL
ALARMS #5 - NIGHT-WATCHMAN
ALARMS #6 - PIPA FAIL
ALARMS #7 - VOLTAGE FAIL
ALARMS #8 - SCALER FAIL
ALARMS #9 - WARNING FILTER
ALARMS #12 - DOUBLE SCALER
ALARMS #15 - GOJAM
ALARMS #18 - E-MEMORY PARITY FAIL　CTS P/N 2014042-071 only

2. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 21 NOUN 27 ENTR
c. 00011 ENTR

DATE 30 JUN 66

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable character electroluminescent elements and all pushbutton electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds:

a. 9's
b. 8's
c. 7's
d. 6's
e. 5's
f. 4's
g. 3's
h. 2's
i. 1's
j. 0's
k. Minus signs in Row 1, Row 2, and Row 3
l. VERB-NOUN Flashing
m. COMP ACTY
(k through m) on concurrently for approx. 5 seconds

n. Plus signs in Row 1, Row 2, and Row 3
o. VERB-NOUN Flashing
p. COMP ACTY
(n through p) on concurrently for approx. 5 seconds

q. COMP ACTY ______ on for approx. 5 seconds, then DSKY blanks

NOTE: Insure that CONDITION LAMPS switch on Indicator Control panel is set to ON.

4. Enter VERB 35 and press ENTR pushbutton on the DSKY. The following DSKY displays shall illuminate for 5 seconds:

a. UPLINK ACTY
b. NO ATT (Momentarily on)
c. STBY
d. KEL REL Flashing
e. TEMP
f. GIMBAL LOCK
g. PROG
h. RESTART
i. TRACKER
j. OPR ERR Flashing

INITIAL TDRR 29882 D.S. PGS 3

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer

DESCRIPTION (cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV R PAGE 2 OF 25

SUBSYSTEM G & N SYSTEM | ASSY

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1 - RUPT LOC
ALARMS #2 - CTR FAIL
ALARMS #3 - TC TRAP
ALARMS #4 - OSCILLATOR FAIL
ALARMS #5 - NIGHT-WATCHMAN
ALARMS #6 - PIPA FAIL
ALARMS #7 - VOLTAGE FAIL
ALARMS #8 - SCALER FAIL
ALARMS #9 - WARNING FILTER
ALARMS #12 - DOUBLE SCALER
ALARMS #15 - GOJAM
ALARMS #18 - E-MEMORY PARITY FAIL

CTS P/N 2014042-071 only

2. Perform following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 21	NOUN 27	ENTR
c.	00011		ENTR

DATE 30 JUN 66

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV R PAGE 3 OF 25

SUBSYSTEM G & N SYSTEM | ASSY

3. Observe that all 9's are displayed in the PROG, VERB, NOUN and Row 1, Row 2, and Row 3 character positions. Check that all applicable character electroluminescent elements and all pushbutton electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds:

a. 9's
b. 8's
c. 7's
d. 6's
e. 5's
f. 4's
g. 3's
h. 2's

k. Minus signs in Row 1, Row 2, and Row 3
l. VERB-NOUN Flashing
m. COMP ACTY

on concurrently for approx. 5 seconds

n. Plus signs in Row 1, Row 2, and Row 3
o. VERB-NOUN Flashing
p. COMP ACTY

on concurrently for approx. 5 seconds

q. COMP ACTY ______ on for approx. 5 seconds, then DSKY blanks

NOTE: Insure that CONDITION LAMPS switch on Indicator Control panel is set to ON.

4. Enter VERB 35 and press ENTR pushbutton on the DSKY. The following DSKY displays shall illuminate for 5 seconds:

a. UPLINK ACTY
b. NO ATT (Momentarily on)
c. STBY
d. KEL REL Flashing
e. TEMP
f. GIMBAL LOCK
g. PROG
h. RESTART
i. TRACKER
j. OPR ERR Flashing

on concurrently for approx. 5 seconds

k. VERB-NOUN Flashing
l. PGNS, CMC and ISS lamps on Indicator Control panel
m. Plus 88888 in Row 1, Row 2, and Row 3

on concurrently for approx. 5 seconds (CMC remains on 10 to 20 seconds after other lamps go out)

After indications a through l go out, plus 88888's shall remain on Row 1, Row 2, and Row 3.

INITIAL TDRR 29882 D.S. PGS. 3

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer

TOOLS AND MATERIAL JDC 12206 CTS UPLINK Tape P/N 2901626-004

DESCRIPTION (cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV S PAGE 2 OF 25

SUBSYSTEM G & N SYSTEM | ASSY

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Perform following DSKY operations:
a. VERB 36 ENTR
b. VERB 21 NOUN 27 ENTR
c. 00011 ENTR

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1 - RUPT LOC
ALARMS #2 - CTR FAIL
ALARMS #3 - TC TRAP
ALARMS #4 - OSCILLATOR FAIL
ALARMS #5 - NIGHT-WATCHMAN
ALARMS #6 - PIPA FAIL
ALARMS #7 - VOLTAGE FAIL
ALARMS #8 - SCALER FAIL
ALARMS #9 - WARNING FILTER
ALARMS #12 - DOUBLE SCALER
ALARMS #15 - GOJAM
ALARMS #18 - E-MEMORY PARITY FAIL

CTS P/N 2014042-071 only

MANUAL DSKY OPERATION CHECK

5. Perform following DSKY operations:
a. VERB 24 NOUN 01 ENTR
b. Observe:
VERB 24 NOUN 01 Flashing
c. 01700 ENTR
d. Observe:
VERB 21 NOUN 01 Flashing
e. +12345 ENTR
f. Observe:
VERB 22 NOUN 01 Flashing
g. -67890 Do NOT press ENTR

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 NOUN 01 continue flashing.

NOTE: 1. The remainder of this JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

2. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedure in this JDC.

3. Insure that UP TELEMETRY switch on Indicator Control panel is set to ACCEPT when performing the CTS UPLINK TAPE LOAD PROCEDURES.

DATE 30 JUN 66

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

NOTE: Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(B) Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(C) Logic Drawer No. 2 - Set AGREEMENT B digit-switches to X01X3070. Set AGREEMENT B switch to STOP.

(D) RDC Interface panel - Press to light CH33-10 pushbutton.

(E) Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape. If alarms occur, press PROCEED and ALARM RESET pushbuttons on

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV. T PAGE 1 OF 25 | INITIAL TDRR 29882 D.S. PGS. 3

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer

DESCRIPTION (cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA 1_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 1 06133A Ch. 3-18-66

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV T PAGE 2 OF 25

SUBSYSTEM G & N SYSTEM | ASSY

3. When only one DSKY is available for testing, the following conditions will occur in steps 12, 16, 20, 24, 26A, and 28:
   a. With DSKY in NAV DSKY location, the G&N Caution lamp on the Monitor Panel will not light as specified.
   b. With DSKY in MAIN DSKY location, the PGNS lamp on the Indicator Control Panel will not light as specified.

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1 - RUPT LOC
ALARMS #2 - CTR FAIL
ALARMS #3 - TC TRAP
ALARMS #4 - OSCILLATOR FAIL
ALARMS #5 - NIGHT-WATCHMAN

   m. Plus 88888 in Row 1, Row 2, and Row 3

   } on concurrently for approx. 5 seconds (CMC remains on 10 to 20 seconds after other lamps go out)

After indications a through l go out, plus 88888's shall remain on Row 1, Row 2, and Row 3.

MANUAL DSKY OPERATION CHECK

5. Perform following DSKY operations:
   a. VERB 24 NOUN 01 ENTR
   b. Observe:
      VERB 24 NOUN 01 Flashing
   c. 01700 ENTR
   d. Observe:
      VERB 21 NOUN 01 Flashing
   e. +12345 ENTR
   f. Observe:
      VERB 22 NOUN 01 Flashing
   g. -67890 Do NOT press ENTR

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 NOUN 01 continue flashing.

NOTE: 1. The remainder of this JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

2. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedure in this JDC.

3. Insure that UP TELEMETRY switch on Indicator Control panel is set to ACCEPT when performing the CTS UPLINK TAPE LOAD PROCEDURES.

DATE 30 JUN 66

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

NOTE: Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(B) Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(C) Logic Drawer No. 2 - Set AGREEMENT B digit-switches to X01X3070. Set AGREEMENT B switch to STOP.

(D) RDC Interface panel - Press to light CH33-10 pushbutton.

(E) Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape. If alarms occur, press PROCEED and ALARM RESET pushbuttons on

DESCRIPTION The purpose of this test is to check gross G & N System operation. Computer DSKY interface is checked by performing a computer controlled DSKY test which verifies correct DSKY character displays. A manual DSKY keyboard test is performed to verify correct key-character display operation. An alarm and interrupts test checks computer

TOOLS AND MATERIAL JDC 12206 CTS UPLINK Tape, P/N 2901626-001

DESCRIPTION (cont)

program error sensing capabilities. Finally a computer controlled test of PIPA and IRIG operation is performed with OG, IG, and MG at 45 degrees. In this position each PIPA I_A is sensing some portion of positive g and the accumulative PIPA measurement should be the value of local g. IRIG performance is checked by measuring the effect of the horizontal component of earth rate (cos x) in the same orientation. The IRIG and PIPA is performed at normal, low and high prime power levels with the CGC self check being performed concurrently.

IMPORTANT: 1. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA and IRIG test within 0.2 hours of that time.

2. Insure that connector assembly (2003099) or Restart Monitor module (2898989) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 01-3A
Chg. 3-18-66

JOB G & N SYSTEM OPERATIONAL TEST | JDC 12206 REV U PAGE 2 OF 30

SUBSYSTEM G & N SYSTEM | ASSY

3. When only one DSKY is available for testing, the following conditions will occur in steps 12, 16, 20, 24, 26A, and 28:
   a. With DSKY in NAV DSKY location, the G&N Caution lamp on the Monitor Panel will not light as specified.
   b. With DSKY in MAIN DSKY location, the PGNS lamp on the Indicator Control Panel will not light as specified.

INITIALIZATION

NOTE: The CMC warning lamp on the Indicator Control panel may light for approximately 10 seconds when +28 VDC CMC Operate Power is applied.

CAUTION: Use extreme care when tilting G&N Mounting Fixture to insure that components do not strike cradle locking handles.

1. Insure that the system is in ISS STANDBY with the CGC/LGC POWER ON and the 400 CPS POWER ON pushbuttons on the Test Control panel lighted. Set the Cradle Assembly to the 32.5° position.

DSKY CHECK

NOTE: 1. Insure steps 2 through 30 are performed for both MAIN DSKY and NAV DSKY except when only one DSKY is available for test. When only one DSKY is available, test may be continued after steps 2 through 30 are performed with the one DSKY in the NAV DSKY location and then repeating steps 8 through 30 with the DSKY in the MAIN DSKY location. Before changing DSKY locations, downmode the system to OIA ON mode according to procedures given in JDC 12204.

2. Verify that all CTS ALARMS lamps (except #6) are out. If not, press ALARM RESET pushbutton on Programmer and Monitor panel. ALARMS #6 lamp shall remain lighted until completion of step 115.

3. CTS ALARMS lamps indicate the following alarms when lighted:

ALARMS #1 - RUPT LOC
ALARMS #2 - CTR FAIL
ALARMS #3 - TC TRAP

DATE 30 JUN 66

MANUAL DSKY OPERATION CHECK

5. Perform following DSKY operations:

a.	VERB 24	NOUN 01	ENTR
b.	Observe:		
	VERB 24	NOUN 01	Flashing
c.	01700		ENTR
d.	Observe:		
	VERB 21	NOUN 01	Flashing
e.	+12345		ENTR
f.	Observe:		
	VERB 22	NOUN 01	Flashing
g.	-67890	Do NOT press ENTR	

6. Observe that Row 1 contains +12345 and that Row 2 contains -67890.

7. Press CLR pushbutton twice on the DSKY. Observe that Row 1 and Row 2 are blank and that VERB 21 NOUN 01 continue flashing.

NOTE: 1. The remainder of this JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

2. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedure in this JDC.

3. Insure that UP TELEMETRY switch on Indicator Control panel is set to ACCEPT when performing the CTS UPLINK TAPE LOAD PROCEDURES.
